

KOP-North-12 was established on Sierra Highway looking at the Antelope Valley Freeway corridor. At approximately S5 MP-20.4 to S5 MP-20.6, the proposed Project would cross over the Antelope Valley Freeway (six-lane State Route 14), the Sierra Highway (2-lane State Highway), and the Acton/Vincent Grade Metrolink railroad (two-tracks).

Overall Visual Sensitivity: moderate. For travelers on the Sierra Highway, Antelope Valley Freeway and railroad in general, and KOP-North-12 specifically, the high viewer exposure, moderate-to-high viewer concern, and low visual quality lead to a moderate overall visual sensitivity of the visual setting and viewing characteristics.
