

This KOP is located within a residential neighborhood adjacent to undeveloped land in the western portion of the City of Chino Hills. Foreground features include the street, sidewalks, houses, parked automobiles, street-lights, planted lawns, shrubs, and trees, with native grasses and shrubs on the skyline hill behind the houses. The existing 220-kV transmission tower and conductors are visible on a low skyline ridge approximately 1000 feet to the southeast.

Overall Visual Sensitivity: high. For residents of Gold Shadow Lane/Avenida Compadres in general and KOP-South-26 specifically, the high viewer exposure, high viewer concern, and moderate-to-high visual quality lead to a high overall visual sensitivity of the visual setting and viewing characteristics.
