D10. CENTREX

10.1 CENTREX

(T)(L)

A. GENERAL

1. Regulations

- a. The rates for trunking include the trunk line facilities except foreign exchange trunk line facilities necessary to furnish the Centrex service. Where the customer requests tie line facilities be connected to local trunk facilities, the rates for trunking include the trunk line facilities necessary to permit tie line type facilities to make such connection. The rates for Centrex lines include the switching equipment necessary to furnish the Centrex service features.

Provision of Centrex with attendant transfer, station transfer and a combination of attendant transfer and station transfer.

- (1) A customer Centrex system may consist of all stations arranged for attendant transfer, all stations arranged for station transfer, or some stations arranged for attendant transfer and some arranged for station transfer.

- (2) The minimum monthly rates for Primary-Centrex with attendant transfer and Primary-Centrex with station transfer "first 2 lines or less" apply to each group of primary stations arranged for either attendant transfer or station transfer.

- b. Centrex service with station transfer shall be furnished only where all stations are served from one switching equipment.

- c. Dormitory flat rate service may be furnished concurrently with a measured rate Centrex service.

- d. Centrex service will be furnished within the base rate area at the rates shown in rates and charges, D.4. following and Schedule Cal.P.U.C. No. A9.1.3 for CO and Restricted Centrex Service.

(T)(L)

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

e. Dormitory lines furnished in D. following, have the same service features as the Centrex service with which they are associated. In addition, the following is also applicable to dormitory stations.

- (1) The lines include service equivalent to that of residence individual line service outlined in Schedule Cal.P.U.C. No. A5.2, Local Exchange Service. For Centrex-CO Dormitory Service charges (Schedule Cal.P.U.C. No. A3.1) apply for new service, additions, in place connection, move and changes.
- (2) The lines will be furnished to schools, colleges and universities who are customers to Primary Lines, as shown in D. following, and may be installed only in the living quarters of residence halls, dormitories, faculty or other employee residences and other similar living quarters, which are owned or leased and operated by a school, college or university and the use of such stations is in accordance with that for residence service as shown under Schedule Cal.P.U.C. No. A2.1., Rules.
- (3) Extension stations may be furnished only where the intended use of such stations is for the occupants of the rooms or space for which the primary stations are furnished.

D10. CENTREX

10.1 CENTREX (Cont'd) (T)(L)

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

e. Dormitory lines furnished in D. following, have the same service features as the Centrex service with which they are associated. In addition, the following is also applicable to dormitory stations. (Cont'd)

(4) One of the following options may be designated for the assumption of responsibility for toll and local message charges associated with each line and/or station and the billing and collection thereof:

Option A

The college or university is responsible for the billing and collecting of toll and local message charges and the payment of all other rates and charges associated with such stations.

Option B

The Utility is responsible for the billing and collecting of toll and local message charges to dormitory stations and, in addition, any restoration-reconnection charges incurred in connection therewith as provided for in Schedule Cal.P.U.C. No. A2.1.11. The college or university is responsible for the payment of all other rates and charges associated with such stations.

Option C

The Utility is responsible for the billing and collecting of exchange, toll and local message and all other rates and charges associated with such stations.

Option B or Option C will be furnished under the conditions of an agreement, as shown in Schedule Cal.P.U.C. No. A2.3 Forms, and negotiated between the university or college and the Utility.

Pacific Bell 24 Hour Discounts Community Plan and Service Area Plan as specified in Schedule Cal.P.U.C. Nos. A6.4.2 and A6.4.3 respectfully, are available to Centrex Dormitory service associated to Option C only.

(5) Apply rates and charges as defined in Schedule Cal.P.U.C. No. A3.1. (L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

f. Optional Features

(1) Rates and charges for optional features are in addition to those for Centrex service.

(2) As shown in D.5. following and Schedule Cal.P.U.C. No. A9.1.3, B.4, the following applies:

- Each arrangement

The Rates and charges apply regardless of the number of lines in the Centrex system.

- Each primary line in the system

The Rates and charges apply to all primary station lines in service in the Centrex system since these are system features that all primary stations in the system have the capability of using.

- Each primary line equipped

The Rates and charges apply to only the station lines equipped with this optional feature individually or as part of a station line group.

(3) Either attendant or machine intercept is included in the primary service. Where attendant intercept is desired in addition to the machine intercept provided with the Centrex system it will be provided at additional rates and charges as shown in D. following.

(4) Attendant transfer of station calls will be provided at additional Rates and Charges as shown in D. following. A primary station line can only be arranged for one type of transfer, either station transfer or attendant transfer.

(5) The nonrecurring charges for certain optional features shown in D. following, do not apply when:

Other work subject to a nonrecurring charge or installation charge or service connection charge is done at the same time on the same line on the same order.

D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

f. Optional Features (Cont'd)

- (6) Call Forwarding Over Private Facilities in the switching equipment is offered in accordance with the following:

Call Forwarding Over Private Facilities (CFPF) for CCSA, EPSCS, ETS and FXS requires a different generic than for WATS and tie lines/Special Access Voice Grade (VG36) Channels. When a customer subscribes to CFPF and the central office is not equipped initially to provide CFPF for CCSA, EPSCS, ETS and FXS as the capability is added, it will be included in the customer's CFPF arrangement at no additional charges.

Incoming local and toll message network and 800 Service calls to primary station lines arranged for CFPF routing are subject to the appropriate charges for such calls. The customer may request a common recorded announcement to inform the caller that the call is being forwarded.

Calls forwarded to the local and toll message network and WATS are subject to the appropriate charges for such calls.

Where the Call Forwarding Over Private Facilities optional service feature routes calls to a specific private facility which is denied access by activation by the Attendant Control of Facilities optional service arrangement, those calls will instead be routed to a common recorded announcement which refers the caller to the system's attendant.

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd) (T)(L)

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

f. Optional Features (Cont'd)

(7) Call Forwarding - Don't Answer

When a primary station line is initially equipped for Call Forwarding - Don't Answer, it will be arranged for a predetermined number of ringing cycles to be completed prior to the call being forwarded.

When a change in the number of ringing cycles is made, apply a nonrecurring charge as shown in D.5.a.(11) following.

(8) Call Forwarding - Reminder Ring

When Reminder Ring is furnished with the initial installation of Call Forwarding Variable or Call Forwarding Over Private Facilities, no additional charges are applicable to provide the feature.

When Reminder Ring is added to an existing primary station line programmed for Call Forwarding Variable or Call Forwarding Over private Facilities, a nonrecurring charge is applicable as shown in D.5.a.(11) following.

(9) Call Forwarding - Internal/External Splits

Call Forwarding Internal/External Splits is available to a customer whose Centrex service is furnished by use of a Digital Switching Systems (DSS) central office equipped with the required call processing and feature capacity and where operating conditions permit.

Call Forwarding Internal/External Splits is not available on an Electronic Business Set feature key.

When a primary station line is equipped with Call Forwarding Internal/External Splits, it cannot be activated/deactivated using Call Forwarding - Customer Programmable. (L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

10.1 CENTREX (Cont'd)

(T)(L)

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

f. Optional Features (Cont'd)

(10) Call Forwarding - Variable - (limited or unlimited)

The use of Call Forwarding, Variable (limited or unlimited) for the establishment of flexible night service connections is only available to those Centrex customers with 50A or 50B Customer Premises Systems (CPS) or compatible customer provided equipment.

(11) Outgoing Trunk Queueing (OTQ) for WATS

OTQ is a feature that provides queueing of outgoing calls directed to WATS access lines and offered with switching equipment where the office is suitably equipped and the capacity is sufficient to provide OTQ without affecting other services.

OTQ permits an incoming tie line/special access voice grade (VG32) channel or primary station line user to dial a pre-selected code and the ten digit telephone number desired. If all WATS access lines are in use, the call attempt is placed in queue. When an access line becomes available, the call attempt is completed without further dialing. If no access lines are available, the call attempt, at the expiration of the queue time period, is advanced to the DDD network or to overflow, whichever option is selected.

OTQ provided only "off hook" (calling party must remain on line) queueing for outgoing WATS facilities associated with or without Flexible Route Selection (FRS).

The customer may specify the length of time (a maximum of 1023 seconds) a call is held in queue (threshold time limit) before overflowing to the DDD network or to overflow tone.

Special Access voice grade (VG32) channels will be required between the central office and the customer's premises at the rates and charges set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3, (A)(B).

Station priority queueing allows an individual station line to be arranged for originating priority. Priority calls are loaded into queues ahead of non-priority calls. Order of arrival is maintained for priority calls already in queue. Station priority queueing is available with initial installation of OTQ at no additional charge.

1. Regulations (Cont'd)

f. Optional Features (Cont'd)

(11) Outgoing Trunk Queueing (OTQ) for WATS (Cont'd)

During the period of time calls are held in queue, one of the following options may be provided:

- Recorded announcement:

The Utility will provide the text and announcement.

- Music on queue:

The customer will provide the music source.

- Silence

The attendant inhibit inflow key, when operated for a higher-numbered WATS band, prohibits the queue for this WATS band from accepting calls queued for a lower-number WATS band.

The attendant inhibit outflow key, when operated for a lower-numbered WATS band, prohibits calls on the associated queue from interflowing to a queue for a higher-numbered WATS band and from completing via DDD network. When the inhibit outflow key is activated a call placed in queue will not time out i.e., the call will be held in queue until a WATS line becomes available or the station user hangs up. (L)

1. Regulations (Cont'd)

g. Tie Lines, Access Lines and/or Special Access Voice Grade Channels.

(1) When tie lines, access lines and/or Special Access Voice Grade Channels are furnished to connect a customer provided switching system to a Centrex system, the tie lines, access and/or Special Access Voice Grade Channel normally will not be arranged for access to the local trunk facilities of the Centrex system. Such access may be provided where specifically requested by the customer and a trunking charge as shown in D.2.d. following, and Schedule Cal.P.U.C. No. A9.1.3, B.2.b. will apply to each tie line, access line and/or Special Access Voice Grade Channel so arranged.

(2) Advanced Private Line Termination (APLT)

APLT is offered in switching equipment with the proper generic.

When one line in a group of lines is terminated using an APLT, all lines in the group must use an APLT.

When converting from terminations that use USOC's RXNXX, ESO and RXN a new I.C. is applicable for each APLT.

(3) Direct Digital Interface (DDI)

DDI provides a connection to a Special Access High Capacity Digital Channel within the Utility's central office. Each DDI consists of one digroup (unit) which is equivalent to 24 derived 64 Kbps DS-0 bit streams (24 voice equivalent circuits). The rates and charges for DDI are in addition to the rates and charges applicable to a High Capacity Service as shown in Schedule Cal.P.U.C. No. 175-T, Section 7.5.8, (C)/ FCC 1. DDI tandem capability is available only where facilities and operating conditions permit.

(T)

Access to the local trunking facilities of the Centrex or PBX system may be provided where specifically requested by the customer. The quality of transmission may vary depending on the distance and routing necessary to complete each call; consequently, overall or end-to-end transmission is not guaranteed by the Utility.

s. Reseller Remote Access Service (RRAS)

(1) RRAS is a Central Office (C.O.) service provided to customers with Centrex-CO service as defined in this Schedule and Electronic Tandem Switching (ETS) as defined in Schedule Cal.P.U.C. No. A9.1.8. Subscribers must be InterLATA Carriers as defined in Schedule Cal.P.U.C. No. 175-T Section 2.6.

(2) Conditions of offering:

- Service will only be furnished where facilities and operating conditions permit.
- The incoming access line used to access the RRAS must be two wire ground start with 16-66 Hz ringing; the outgoing Centrex station line must be two wire loop start.
- The user accessing the RRAS must be from a Touch-Tone Calling Service line or from a line where a dual tone multifrequency (DTMF) ancillary device is used.
- Touch-Tone Calling Service or DTMF tone signaling may be used for signaling between end users on a permissive basis. However, it is not guaranteed by the Utility as transmission characteristics, of exchange facilities between end users, may not be compatible with the signaling in every instance.
- The liability of the Utility for damages arising out of mistakes, omission, interruptions, delays, errors or defects in transmission or facilities, shall in no event exceed an amount equal to the fractional charge of the RRAS for the period of service affected.
- The originating station accessing the RRAS is responsible for the payment of all applicable charges for each completed call to the RRAS. Once connected to the RRAS lines used by this arrangement, the RRAS Centrex customer becomes responsible for the payment of all applicable charges for each completed call. The respective charge for each such portion shall be in accordance with regularly filed tariff schedules.

(2) Conditions of offering: (Cont'd)

- The amplifier has an automatic level control that will extend the voice frequency range. The dominant or stronger voice signal is amplified while the non-dominant or weaker voice signal is attenuated by an amount equal to the amplified signal. When the voice signals are less than a preset value, the amplifier turns off and no gain or attenuation is provided.
- The amplifier includes a data disabler which prevents the amplifier from interfering with data transmission. A disable tone generated during answer-back of the customer's modem disables the amplifier. When disabled, the amplifier is transparent to the transmission of data. The amplifier remains disabled until the data transmission ceases.
- The quality of transmission may vary depending on the distance and routing necessary to complete each call; consequently, overall or end-to-end transmission is not guaranteed by the Utility.
- Any access line used in conjunction with an Interexchange Carrier's (IEC's) Centrex-CO/ETS exchange service for InterLATA usage, will be subject to rules and regulations as defined in Schedule Cal.P.U.C. No. 175-T and all applicable F.C.C. Tariff Rules and Regulations.
- Customers are required to pay all applicable Basic Termination Charges (BTC) as shown in D. Rates and Charges, 11. of this Schedule; plus, Minimum Billing applies as defined in Schedule Cal.P.U.C. No. A2.1.9.

t. Detariffing

Effective January 1, 1983, in accordance with the order of the FCC in Docket 20828, customer premises equipment, as defined by the FCC, will be provided by the Utility for use with new or existing service only so long as such equipment is available from Utility inventory acquired prior to January 1, 1983, except as otherwise permitted by the FCC.

The Utility will continue to provide maintenance for the Utility-provided customer premises equipment subject to the availability of replacement parts and/or equipment.

(T)(L)

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

ac. Centrex ISDN (Centrex Integrated Service Digital Network) (Cont'd)

- Centrex ISDN will be furnished using the T-Interfaces, as specified by the American National Standards Institute (ANSI), on a contract basis only, where operating conditions permit, due to the unprotected nature of the T-Interface card.
- The customer is responsible for providing compatible premises equipment in order to utilize the Centrex ISDN offering. All customer provided equipment used to interface with Centrex ISDN is required to conform with the Technical Reference Specifications as used by the Utility and found in the Switch Vendors Technical References:

<u>Vendor</u>	<u>Contact Number</u>
AT&T Customer Information Center	1-800-432-6600
NTI	1-800-347-4850

- Variations in the switching and control equipment used may cause differences in the operation or availability of certain features.
- Foreign Exchange Centrex Service as defined in C.26 following is not applicable to Centrex ISDN service. However, Centrex ISDN may be furnished from a contiguous or noncontiguous exchange or district area as selected by the customer other than the exchange or district area which the customer's primary location is located as set forth in C.50 and D.17 following.
- Extention Line Service is not offered with Centrex ISDN.
- The customer has the option to connect terminals that function in the stimulus or functional signalling mode.
- Centrex ISDN, at the Rates and Charges set forth in D.17 following may be furnished with Dormitory lines, Option A, as set forth in A.1.e.(4) preceding and D.4. following. Dormitory lines have the same service features as the Centrex and Centrex ISDN service with which they are associated except: Shared Directory Number, Secondary Directory Number and Analog Shared Directory Number.

A. GENERAL (Cont'd)

1. Regulations (Cont'd)

ac. Centrex ISDN (Centrex Integrated Service Digital Network) (Cont'd)

- Commerical power or another power source, including outlets, is required for the operation of compatible premises equipment and will be furnished, owned and maintained by the customer.
- B-Channel Contention (multiple devices on a single B channel) is allowed on the Basic Rate Interface (BRI) where central office facilities and operating conditions permit. A maximum of eight (8) physical devices are allowed on a BRI.
- The following service standards and associated performance incentives are applicable¹:
 - (1) In cases where the Utility fails to keep an appointment with a customer for ISDN service or installation, the Utility will credit the customer \$25.00 for each missed appointment. The credit will not apply in cases where the appointment is not kept as a result of customer action.
 - (2) The Utility will discount its installation charge for any customer by 10% for each day it fails to install ISDN service after 10 business days from the date of the initial order or the date the customer requests installation, whichever is later. In cases where the Utility must determine whether the customer's line is capable of being equipped with ISDN service, the discount will apply after 15 business days from the date of the initial order or the date the customer requests installation, whichever is later.
 - (3) The Utility will credit customers \$5.00 for each day repairs required on the Utility's system and which are not a result of customer conduct are not made, beginning 24 hours after the customer reports the system problem. This customer credit is waived in areas and during periods for which the governor has declared a state of emergency or natural disaster.

NOTE 1: These performance incentives are effective May 1, 1997 and will terminate on April 30, 2001.

an. CentrexSMARTsm

CentrexSMART is offered subject to the availability of necessary facilities.

CentrexSMART is not represented to be a provision of billing detail.

Station message detail records will be provided on terminal equipment located at the customer's premises at the rates and charges specified in D. following. At the customer's option, these records will automatically be provided at specified intervals at no additional charge to the customer.

Processing of message detail information (CentrexSMART) will be performed by the customer at their expense. The customer is responsible for all terminal equipment and/or software required to perform such processing.

The customer must designate all station lines in a Centrex customer group and or selected facility groups on which CentrexSMART originating and terminating records are to be provided.

Where CentrexSMART is provided, a detailed record may be made for each completed call. At the option of the customer, arrangements can be made to provide records of calls attempted as well as calls completed. Under certain conditions, with CentrexSMART, calls may be processed without recording the call detail.

CentrexSMART includes the recording of Account Codes and Authorization Codes where these optional features are provided.

Charges applicable to CentrexSMART Common Equipment are based upon the total number of lines in the customer's Centrex system.

Aggregation and Operational Measurement Reports are available at the customer's option at additional charges as specified in D. following.

The type/grade of access line required between the serving central office CentrexSMART Common Equipment and the customer's premises will be determined by the customer depending upon the terminal equipment utilized to receive the CentrexSMART records. Rates and charges for this access line will apply in addition to rates and charges specified in D. following.

- (1) May include Centrex EBS lines, however may not include Centrex ISDN lines
- (2) A 12-month verbal term agreement (T)

The chart below determines the customer's amount of discounts. (T)

- (a) Retention² discounts apply to all eligible new or existing customers.
- (b) Winback² discounts apply to all customers who have discontinued their business with the Utility for the purpose of establishing service with a Competitive Local Exchange Carrier operating within the Utility's territory who now wish to return to the Utility. (T)

	<u>Classic Feature Package Discount</u>	<u>WirePro^(1,3) Discount</u>	<u>Unlimited Local Calling Plan WirePro^(1,3) Discount⁽⁴⁾</u>	
<u>Retention² Customer</u>	<u>\$0.07 per line on two working lines</u>	<u>\$0.50 per line, minimum two working lines, maximum 9 working lines</u>	<u>\$4.80 (R) first line, Plus \$2.40 (R) additional per line up to maximum 9 working lines</u>	<u>(C)</u> <u>(C)</u>
<u>Winback² Customer</u>	<u>\$0.32 per line on two working lines</u>	<u>\$1.00 per line, minimum two working lines, maximum 9 working lines</u>	<u>\$4.30 (R) first line, Plus \$1.90 (R) additional per line up to maximum 9 working lines</u>	<u>(C)</u> <u>(C)</u>

NOTE 1: WirePro is a Category III Service, see Schedule Cal.P.U.C. No. D7.4 Inside Wire Repair - Business. (T)

NOTE 2: Retention and Winback discounts are mutually exclusive. A customer can only receive discounts under the Retention or Winback discounts as described above.

NOTE 3: WirePro credit will apply to all working lines that subscribe to WirePro, provided a minimum of two working lines and a maximum of nine working lines and all working lines are billed on the same bill.

NOTE 4: The Unlimited Local Calling Plan discount applies to Retention Customers as described in (a) and Winback customers as described in (b). An additional \$4.80 discount for Retention Customers or \$4.30 discount for Winback Customers applies for the first line. For Retention Customers a \$2.40 WirePro discount or Winback Customers a \$1.90 WirePro discount applies for each additional line. There is a maximum nine working lines for customers that subscribe to the Business Solutions Plus Unlimited Local Calling Plan (see Schedule Cal.P.U.C. No. A6.5.18). (N)

D10. CENTREX

- 10.1 CENTREX (Cont'd) (N)
A. GENERAL (Cont'd)
2. Centrex Term Offerings (Cont'd)
d. Business Solutions (Cont'd)

Customers must verbally commit to a minimum 12-month term agreement to receive the Business Solutions Discount.

In the event of early termination, customers will be charged an early termination fee equal to the Business Solutions credits applied to their account from the time of the verbal commitment until early termination.

If a customer exceeds their 12-month verbal commitment, they will continue to receive monthly credits as long as they continue to qualify pursuant to the regulations as set forth within this tariff.

A customer may migrate from one Centrex term offering to another Centrex term offering and not incur early termination fees as long as:

- (1) All working lines under the current term offering are migrated to the new term offering
- (2) The new term agreement is greater than the current term agreement and they have been on their current term for at least 4 months.

(T)(L)

B. BASIC FEATURES

1. Centrex CO service may be provided from #5 Cross Bar (#5 X-Bar), Electronic Switching System (ESS), or Digital Switching System (DSS), including but not limited to the DMS 100 and #5ESS type central office equipment located on the Utility's premises. The service is furnished subject to the availability of the necessary switching and control equipment. Variations in the switching and control equipment used may cause differences in the operation or availability of certain features.

Centrex CO Service consists of two basic, distinct components: Basic Centrex Features and Basic Centrex Access.

- a. The Basic Centrex Features component provides the call-processing features included in basic Centrex service as set forth in 3. following.
- b. The Basic Centrex Access connects the customer's premises to the Utility's CO. The use of these facilities is limited to those services provided for in this tariff schedule. Basic Centrex Access consists of all the Utility's CO equipment, including exchange access trunking, and outside plant facilities that are needed to connect the serving CO to the Utility Network Interface or its equivalent.

A Separate rate element applies to each component as provided for in D., following.

2. Centrex-CO service from #5 X-Bar type central office equipment will be provided only from offices which are presently arranged for Centrex service and only to the extent of that existing capacity. Customers utilizing this service may continue to do so at their present locations as long as no major changes or additions to their systems are required.

B. BASIC FEATURES (Cont'd)

3. The following call-processing features are included in basic Centrex service and are provided under control of the common equipment of the central office switching system:

- a. Direct inward dialing to stations and attendant positions of the Centrex system.
- b. Station line identification and billing of outward dialed toll and Zone 3 of zone calling (ZUM) unit calls.
- c. Intercommunication between stations of the same Centrex system.
- d. Call Transfer

(1) Station-controlled transfer of calls to other stations of the same Centrex system. This feature also allows a station user to hold a call and originate a call to another station inside the system for consultation and add-on purposes. Only one station outside the Centrex system may be involved in the transfer arrangement. Station transfer and add-on connections are subject to transmission limitations.

2) Call Transfer - Individual - All Calls: Consultation Hold - All Calls; and Three-Way Calling - All Calls. A station user may hold any established call by flashing the switchhook, and on the same line originate a call to another telephone in or outside the Centrex system for private consultation. After the called person's answer or consultation, the station user can by flashing the switchhook a second time, either:

- Return to the original call that was held, after the second station user hangs up, or
- Add the second station user to the original call (Three-Way Calling)

The station user can also transfer the second station user to the original call by hanging-up after utilizing the Consultation Hold-All Calls and/or the Three-Way Calling feature. Only one party may be outside the Centrex system on the call transfer.

B. BASIC FEATURES (Cont'd)

3. The following call-processing features are included in basic Centrex service and are provided under control of the common equipment of the central office switching system: (Cont'd)

e. Station number hunting series-sequential and nonsequential order or circular hunting.

f. Automatic interception of calls to unassigned station numbers and routing to a common recorded announcement, which is located in the Central Office.

g. Night answer any station. This feature is controlled at the attendant position. When activated, incoming calls to the primary listed directory number of the system activate a common alerting signal on the customer's premises. These calls may then be answered by any nonrestricted station in the system by dialing a prearranged code.

10.1 CENTREX (Cont'd)

(T)(L)

B. BASIC FEATURES (Cont'd)

3. The following call-processing features are included in basic Centrex service and are provided under control of the common equipment of the central office switching system: (Cont'd)

h. Flexible night service: Centrex attendants equipped with 50A or 50B Customer Premises Systems (CPS) and Call Forwarding - Variable (limited or unlimited) are capable of establishing selected Listed Directory Numbers (LDN) as night connections within the limitation of the serving feature.

i. Touch-Tone Calling Service

j. First eight treatment codes or line class codes per primary station line.

k. Single-Digit Dialing service is offered with ESS/DSS type Centrex-CO service where the switching equipment is suitably equipped. This feature permits a station user to reach selected lines or other internal facilities for special customer services by dialing a single-digit code.

4. These features are available to all stations of a Centrex system which are located at a designated customer primary location. The basic features of a Centrex system may be extended to stations of the same system located at secondary customer locations where facilities and operating conditions permit.

5. Provisions of Centrex service and its optional features is subject to the availability of the required central office switching equipment, call processing and feature capacity. It also may be limited by the availability of facilities and local operating conditions. All station-controlled features involving multiple line connections are subject to transmission limitations, e.g., Consultation Hold, Three-Way Calling and Conferencing.

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES

1. Attendant Camp-On and Indication of Camp-On

An incoming exchange network (listed directory number) or Common Control Switching Arrangement (CCSA) attendant call which the attendant attempts to complete to a busy station line within the Centrex system is held waiting until the called station becomes idle. The called station is then automatically rung and connected to the incoming call upon answer.

Indication of Camp-On is furnished with Attendant Camp-On and provides an audible burst of tone to the busy called station to indicate that the incoming call is camped on. Subsequent bursts of tone are applied each time the attendant leaves the waiting connection after reverifying the caller's desire to wait.

2. Attendant Transfer

The station user, by momentarily depressing and releasing the switchhook, signals and adds the attendant to the connection. The attendant may then transfer the incoming call to another station of the same Centrex system. The Attendant Transfer feature and the station transfer feature cannot be provided to the same Centrex station.

(L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

Continued

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

3. Automatic Callback

Automatic Callback permits a primary station line user who attempts an intercommunication call to a busy primary station line to be automatically connected to that line when both called and calling lines are subsequently idle. Automatic Callback is only operational for intercommunication calls between primary station lines served by the same customer group.

A calling primary station line is permitted only one Automatic Callback request at a time. In the #1ESS the called primary station line is limited to only one request at a time for Automatic Callback. Once requested, Automatic Callback will remain active for a period not to exceed thirty minutes unless deactivated by the calling primary station line.

4. Advanced Private Line Termination (APLT)

APLT is a termination designed primarily for use with Enhanced Private Switched Communication Service (EPSCS) access lines but can be used to terminate dial tie lines (tandem and non-tandem), Common Control Switching Arrangement (CCSA) access lines and Electronic Tandem Switching (ETS) tie trunks when required.

5. Busy Verification

The attendant may establish a connection to an apparently busy station line to determine if the station line is in working order. When the attendant, with live transmitter, is connected to a busy station line, periodic bursts of tone are applied to alert the talking parties to the attendant's presence.

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

6. Call Forwarding

a. Variable

(1) (Limited)

When this feature is activated by a station line user or the attendant, incoming calls to the activated station line or attendant position will be automatically routed to any other selected station line, within the same Centrex system, or to the attendant position. The attendant may also activate this feature for a station line user.

(2) (Unlimited)

The same as Call Forwarding Variable Limited except that incoming calls may be automatically routed to a telephone number outside the Centrex system or to station lines within the same Centrex system. The attendant may not activate this feature to a telephone number outside the Centrex system for a station line user. Calls forwarded outside the Centrex system are subject to the appropriate charges for local and toll messages.

- (3) In ESS central offices either Call Forwarding Variable Limited or Unlimited but not both may be provided in the same Centrex system. Call Forwarding Variable Limited and Unlimited may be provided in the same Centrex system in DSS central office.

b. Call Forwarding - Busy Line

Automatically routes direct-in-dialed calls to the attendant, to any other station line, or to another number outside the Centrex system in those offices that are suitably equipped or within the same serving central office as the Centrex, when the called station line is busy. Calls forwarded outside the Centrex system or within the same serving central office as the Centrex are subject to the appropriate local and toll message charges.

(L)

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

6. Call Forwarding (Cont'd)

c. Call Forwarding - Don't Answer

Automatically routes direct-in-dialed calls to the attendant, to any other station line, or to another number outside the Centrex system in those offices that are suitably equipped or within the same serving central office as the Centrex, when the called station line does not answer within a prescribed time interval. Calls forwarded outside the Centrex system or within the same serving central office are subject to the appropriate local and toll message charges.

d. Call Forwarding Over Private Facilities

Call Forwarding Over Private Facilities (CFPF) incorporates and expands Call Forwarding - Variable capabilities. CFPF allows a Centrex Primary Station user to have incoming calls forwarded to a location outside the Centrex group using a specific selected facility or network which may include Common Control Switching Arrangement (CCSA), Enhanced Private Switched Communications Services (EPSCS), Electronic Tandem Switching (ETS), Wide Area Telecommunications Service (WATS), Foreign Exchange Service (FXS), senderized tie lines/special access voice grade channels and DDD. Automatic Route Selection (ARS) may also be selected.

e. Call Forwarding - Reminder Ring

Call Forwarding Reminder Ring provides for a distinctive ringing signal to be furnished to a Call Forwarding variable or Call Forwarding Over Private Facilities equipped primary station line at the time a call is forwarded.

f. Automatic Forwarding Over Customer Facilities

Automatic Forwarding Over Customer Facilities (AFCF) is an arrangement that allows incoming calls to an AFCF Directory Number to be automatically forwarded to a Utility provided private facility which may include Direct Digital Interface, Tie Lines and Special Access Voice Grade Channels. Each AFCF arrangement consists of a Directory Number and the specific private facility the calls are forwarded to.

C. OPTIONAL FEATURES (Cont'd)

6. Call Forwarding (Cont'd)

g. Call Forwarding - Personal Call Screening

Call Forwarding - Personal Call Screening incorporates and expands Call Forwarding Variable capabilities. Personal Call Screening permits a station, that has been programmed to have calls forwarded to it, to be able to transfer the call back to the original called station.

h. Call Forwarding - Customer Programmable

Call Forwarding - Customer Programmable (CFCP) permits a station user to activate, change and/or deactivate the forwarded to number by dialing an activation/deactivation code. The station user may activate/deactivate Call Forward Busy and/or Call Forward Don't Answer and program the forward to number from the station. Incoming calls presented to a busy line can be forwarded to one alternate number while calls presented to an unanswered line can be forwarded to a different number. When this feature is activated by the station user all incoming calls will be automatically forwarded to the customer programmed telephone number outside the Centrex system or to a station line within the Centrex system when the station is busy or unanswered. Calls forwarded outside the Centrex system are subject to the appropriate charges for local, ZUM and toll messages.

i. Call Forwarding - Internal/External Splits

Call Forwarding Internal/External Splits automatically forwards incoming calls to different internal or external telephone numbers based on call origination. A call that originated internal to the Centrex system will be forwarded to a predetermined number internal or external to the system and calls originating external to the Centrex system may be forwarded to a different predetermined internal or external telephone number. Calls forwarded outside the Centrex system are subject to the appropriate charges for local, ZUM and toll messages.

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

7. Call Hold

A station user may "hold" any call in progress by flashing the switchhook and then by dialing a "hold" code, clear the same line for the purpose of originating another call or returning to the previously held call. Only one call per station line may be held at one time. The "held" call cannot be added to the second call.

8. Call Pickup

A station user may answer any call directed to another station line within his own preset pickup group by dialing a special code. If more than one station line in the pickup group has an unanswered incoming call, the individual call to be answered will be selected by the switching system.

9. Directed Call Pickup (With or Without Barge-In)

- a. A station user may answer calls directed to any other station line in the Centrex system by dialing the unique answer code and the number of the station to be answered. The station for which calls are to be picked up must be arranged for Directed Call Pickup.
- b. The station picking up the call and the station whose calls are to be picked up must be in the same centrex group. With Directed Call Pickup, the call pickup group may be the entire Centrex system. The number of primary station lines in a call pickup group is generally limited by the audible or visual facilities used to provide suitable identification of the primary station line that is ringing.

10. Directed Call Park

Directed Call Park allows Centrex stations to park a call against any other Centrex station directory number within the same group. The call may be retrieved from any other station.

C. OPTIONAL FEATURES (Cont'd)

10.1 Direct Inward Dial to Direct Outward Dial (DID - DOD) Transfer

DID - DOD Transfer is an optional feature arrangement available to Centrex services equipped with Call Transfer-Individual-All Calls or Universal Call Transfer feature capability as defined in B.3.d.(2)., preceding. It allows a Centrex station user to transfer a direct inward dial call to a telephone number outside of the Centrex system. Once the transfer has been established, the Centrex station user either may remain with the call or hang up to complete the transfer, without disconnecting the outside parties. The Centrex station user who hangs up from an established transfer may continue to originate and receive calls normally. Refer to A.1.f.(13) preceding, regarding customer responsibility for the payment of applicable charges.

11. Call Waiting

- a. Call Waiting allows an incoming DID call to a busy line to be held while an audible burst of tone is provided to the busy station line connection to indicate that a call is waiting.
- b. Call Waiting, Call Forwarding - Busy Line and Attendant Camp-On features cannot be provided to the same Centrex line.

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

11. Call Waiting (Cont'd)

c. Call Waiting Originating

This option is provided in addition to Option a. listed above and may be provided separately. The option allows an originating party to initiate a call waiting indication on all Centrex intragroup station-station calls.

d. Intragroup Call Waiting

- (1) This option, provided per Centrex group, allows those Centrex stations with the Call Waiting option to receive indication of call waiting on intragroup calls. These calls include station-station tie trunk (regular and satellite), and attendant calls.
- (2) Call Waiting Intragroup is only provided when the customer subscribes to Call Waiting Incoming. When Call Waiting Intragroup is ordered, all Centrex lines equipped with Call Waiting Incoming will be equipped with Call Waiting Intragroup.

e. Waiting Originating and Call Waiting Intragroup features are applicable only to the lines of the same Centrex group.

f. Dial Call Waiting

Dial Call Waiting (DCW) allows originating Centrex station users to invoke call waiting service on selected intragroup calls by dialing the DCW access code followed by the extension number of the station to be call waited.

12. Conference Calling

a. A station user may establish a conference connection of up to sixx (ESS) or thirty (DSS) conferees (including self) without the aid of the attendant. Depending on the switching system, limitations exist on the number and types of trunks that may be included in the conference in lieu of station lines of the same Centrex.

b. Conference Equipment provides for the conferencing of five or less primary station lines where facilities and operating conditions permit.

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

13. Speed Calling

a. A station user may assign abbreviated codes to certain called numbers. This permits him to dial the selected numbers using fewer digits than normally required.

b. Two types of speed calling lists are available:

Short list - may be either an individual or group list and may contain from six to ten telephone numbers per list.

Long list - may be either an individual or group list and may contain from thirty to seventy telephone numbers per list.

The quantity of numbers in a Speed Calling list will vary with switching technology. Options include either fixed list or customer changeable list. Group Speed Calling requires a minimum of two station users.

c. Each primary station line may access one list of each type. The rates shown apply to each list furnished. Individual speed calling list is not available to station lines assigned in multiline hunting.

d. Where available in the switching equipment, the customer may add, remove or change telephone numbers in his speed calling list by dialing a special code followed by the new entry.

14. Direct Inward System Access (DISA)

Direct Inward System Access allows authorized outside callers to access Centrex service and facilities without attendant assistance. The caller gains access by dialing a DISA directory number, a seven (7) or ten (10) digit number or an Inward Wide Area Telephone Service then number, enters an authorization code and the called number.

15. Customer Dialed Account Recording (CDAR)

Permits Centrex stations and attendants to dial an account or project number of up to eight digits. For use when placing calls over facilities arranged for Automatic Message Accounting (AMA) recording. The account or project number must be input prior to dialing the called number.

- a. CDAR will be furnished where facilities and operating conditions permit.
- b. CDAR may be used in connection with exchange trunks provided with the Centrex service, with intrastate and interstate outward WATS access lines and where the customer subscribes to 100% Call Detail over access lines to a Common Control Switching Arrangement (CCSA) from a suitably equipped central office.
- c. Rates and charges applicable to providing message detail with CDAR detail are as shown in Schedule Cal.P.U.C. No. A10.5.1, Supplemental Billing Service.
- d. Account, project number or authorization codes may not exceed 8 digits.
- e. The nonrecurring charge shown in D.8.d.(2) following, applies where any type of outward WATS facilities are included in a CDAR arrangement.
- f. CDAR Non-Billed Record Identification (NBRI) is a feature that gives the Centrex attendant the capability of recording CDAR information up to a maximum of 8 digits for incoming calls on an AMA account number record before extending the call to a Centrex station line or other line terminated in the Centrex system.
- g. With NBRI the Centrex attendant can extend incoming calls with CDAR information to Centrex station lines and other lines where facilities and operating conditions permit.
- h. In addition to the following rates and charges for Centrex NBRI shown in D.8.d.(3) following, the customer must subscribe to Supplemental Billing Service which is filed in Schedule Cal.P.U.C. No. A10.5.1.

C. OPTIONAL FEATURES (Cont'd)

16. Distinctive Ringing and Call Waiting Tone

- a. Distinctive Ringing and Call Waiting Tone are furnished in different classes which permit primary station line users to identify the source of calls. These three classes identify:

<u>Class</u>	<u>Call Source</u>
A	Intercommunication
B	Direct inward dialed local and toll Attendant completed CCSA access line Tie line/Special Access Voice Grade Channel
C	Preemptible SCAN (Autovon) access line Call Waiting-Originating 51A Console night service arrangement

- b. Distinctive Ringing is furnished to indicate the source of calls to idle primary station lines. Distinctive Tone is furnished to indicate the source of calls to busy primary station lines equipped for Call Waiting optional service features.

(L)

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

16. Distinctive Ringing and Call Waiting Tone (Cont'd)

- c. A Distinctive Ringing/Tone is furnished to each class and is used to identify all call sources within each class.
- d. Class A ringing/tone is not furnished separately and is included at no additional charge to primary station lines arranged for Class B ringing/tone. Class C ringing/tone may be furnished separately or in association with Class B ringing/tone.
- e. Class C tone associated with Call Waiting-Originating will only be provided where all primary station lines in the same customer group are commonly arranged for Class C tone.
- f. Where a customer's system is equipped with a 51A Console and is arranged for Class B ringing/tone, Class C ringing will be provided to identify night service arrangement extended calls to primary station lines at no additional charge.

17. Outgoing Trunk Queueing (OTQ)

OTQ is a feature that will provide queueing of outgoing WATS calls placed over Tie Line/Special Access Voice Grade Channels or by primary lines. OTQ will hold calls in queue for a specified length of time before routing them to the DDD network or overflow tone.

18. Music/Silence In Queue

Allows for customer-provided music or silence in queue for No. 1/1A ESS - CO/ACD Type A and B terminating lines and Centrex UCD Service. Complete Rates and Charges, descriptions and Regulations as defined in Schedule Cal.P.U.C. No. A9.4 are applicable.

19. Selected Customer Control of Facilities (SCCOF)

- a. Selected Customer Control of Facilities is a 50A and 51A Console attendant position optional service arrangement which permits the attendant to restrict the access of all primary station lines to specific facility groups which are a part of a predetermined routing pattern.
- b. When the Selected Customer Control of Facilities optional service arrangement is activated for a facility group, calls directed to that group will automatically proceed to the next idle route designated in the routing pattern.

C. OPTIONAL FEATURES (Cont'd)

19. Selected Customer Control of Facilities (SCCOF) (Cont'd)

- c. When a facility group is restricted by use of the Selected Customer Control of Facilities optional service arrangement, access to that group is restricted whether the call attempt is via a predetermined routing or normal access method.

20. Source Billing of Attendant-Handled Calls (SBAC)

- a. Source Billing of Attendant-Handled Calls (SBAC) is a feature that permits calls extended by the attendant to be recorded as an AMA entry which includes identification of the station number of the source party who requested the attendant assistance and an indication that the call was handled by the attendant.

The AMA record of SBAC calls may be included with the detailed of other calls when the customer subscribes to Schedule Cal.P.U.C. No. A10.5.1, Supplemental Billing Service.

- b. SBAC is offered with switching equipment where the office is suitably equipped
- c. SBAC is a Centrex feature that is available to all Centrex attendant facilities in the Centrex group that has this feature. A source party must be internal to the master Centrex complex that includes the attendant. The source parties included are:

- (1) Centrex line.
- (2) Centrex satellite tie-trunk.
- (3) Regular tie-type trunk.

21. Sectional Billing Service

- a. The Utility will render to the customer, in accordance with D.8.h. following, two or more sectional bills as determined by the customer.
- b. A sectional bill may include all local message usage, zone calling (ZUM) units and toll charges, credits, rates and charges for exchange service, supplemental equipment, directory listings and classified directory advertising charges associated with Centrex station line numbers included in each sectional bill.

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

21. Sectional Billing Service (Cont'd)

c. Other rates and charges considered to be common to the Centrex system not normally associated or identified with Centrex station lines will be included on one of the bills designated by the customer.

d. Each sectional bill will be rendered in the name of the customer to the Centrex service who is responsible for the payment of all sectional bills applicable to the service:

(1) Where primary lines arranged for attendant and station transfer are combined within the same Centrex service, and the customer requests Sectional Billing Service, two sectional bills will be provided at the rates and charges shown for "first sectional bill" and "each additional sectional bill".

22. Flexible Route Selection Service (FRS)

a. FRS is offered with switching equipment where the office is suitably equipped and where the capacity of the office is sufficient to provide FRS without affecting other services.

b. FRS is a Centrex optional feature designed to select the most economical routing at any given time for a dialed outgoing call over a variety of a customer's available facilities. The most economical route may be a WATS access line, CCSA - offnet, separate local exchange trunk or foreign exchange trunk. Tie lines and special access voice grade channels and Direct Digital Interface connections used for off-network dialing (see paragraph c. following) may be included as a possible route. The switching equipment will attempt to complete a call over a maximum of four such routes, and if these are found to be busy, will complete the call over the local trunks furnished with the Centrex service. FRS is activated by dialing an access code followed by the telephone number. The maximum number of digits dialed for a telephone number may vary depending on the proper program updates of the serving central office.

(1) Certain types of calls will always be completed over the local trunks of the Centrex service: operator-handled calls, calls within the local calling area, calls over facilities not accessed by the flexible route selection access code, etc.

Zum Zone 3 and IntraLATA toll calls may be completed over the customer's private facility as described in C.22.c. following.

C. OPTIONAL FEATURES (Cont'd)

22. Flexible Route Selection Service (FRS) (Cont'd)

(2) Where the customer wishes to restrict or permit outgoing traffic to predetermined prefixes or codes, rates and charges for exchange and message toll diverting or toll restrictor equipment apply.

c. A route is a customer private facility used to complete direct dialed chargeable calls:

(1) WATS access line (by band or service area),

(2) CCSA - offnet,

(3) separate local exchange trunk,

(4) foreign exchange trunk,

(5) Outgoing tie lines and special access voice grade channels from the Centrex and Direct Digital Interface connections which are used for off-network dialing at the distant location are usable as FRS routes on a non cut-through basis only and are subject to limitations of facilities and operating conditions.

A route may consist of one or more lines of the same type of facility that the customer may use to reach a distant telephone number. The maximum number of digits dialed for a telephone number may vary depending on the proper program updates of the serving central office.

(6) Carrier WATS Connection

d. A pattern is a route sequence to be followed in completion of a call. It is a priority list of routes over which calls to a group of prefixes or codes are directed. The number of patterns a customer requires is governed by the type and variety of private facilities to which the customer subscribes.

(1) FRS installed prior to (March 21, 1991): Where the choice of more than one route is available for completion of calls within a Numbering Plan Area (NPA), 6-digit translation (USOC item ECR) is required for each NPA involved. Rates and Charges shown in D.9.a.(3) are applicable.

C. OPTIONAL FEATURES (Cont'd)

22. Flexible Route Selection Service (FRS) (Cont'd)

e. Charges applicable to changes and rearrangements:

(1) FRS installed prior to (March 21, 1991): Where a change in capacity of patterns is required, the rates and charges for the new pattern capacity shown in D.9.a.(2) following, apply.

(2) Rates and Charges D.9.a.(5) for FRS installed prior to (March 21, 1991) and D.9.b.(5) for FRS installed on or after (March 21, 1991) following, do not apply where a pattern has been established in accordance with the request of the customer and subsequent changes in telephone prefixes or codes are initiated by the Utility that affect such patterns.

f. When identification of the calling primary Centrex station line number is desired for calls routed over an outgoing WATS line via FRS, the customer must subscribe to Supplemental Billing Service which is filed in Schedule Cal.P.U.C. No. A10.5.1. Station lines from another PBX or Centrex that access the FRS by using Tie Lines (TL) or special access voice grade channels can not be identified, only the TL or special access voice grade channels group number will be shown.

g. Separate local exchange trunks that are used as a route in the FRS may be assigned from a different prefix than that of the Centrex service.

h. Non-Billed Record Identification (NBRI), can provide Individual Station Billing (ISB) for foreign exchange trunks and tie lines/special access voice grade channels that are used for network calling.

i. An Expensive Route Warning Tone indicates when a more expensive route is being used. The customer must designate which routes are to receive the tone.

C. OPTIONAL FEATURES (Cont'd)

23. Multiple Position Hunt

a. Multiple Position Hunt (MUPH) feature is a line hunting arrangement that provided the ability to distribute calls over a group of 16 line-loop console positions, each of which can handle six types of incoming calls. Incoming calls are routed to idle positions with an idle loop for that call type. This feature will be furnished only where facilities are available in the switching equipment.

b. MUPH is offered only with the 50A Customer Premises System (CPS).

c. Call Queueing can be provided with MUPH.

(1) Calls are classed according to the facilities used for incoming service, e.g., FXS, WATS, local exchange service, and are completed to the next available position arranged for access by that incoming service. When all facilities are busy for a specific type trunk, any incoming calls to these trunks will be placed in queue and given an audible tone.

(2) The Utility will develop a recommended number of queue slots for each customer system based on traffic usage analysis. The customer does not have to purchase the recommended number of queue slots. (L)

C. OPTIONAL FEATURES (Cont'd)

24. Individual Billing Directory Number (IBDN) for outgoing WATS calls

- a. IBDN is offered with switching equipment where the office is suitably equipped and where the capacity of the office is sufficient to provide IBDN without affecting other services.
- b. IBDN is a Centrex feature designed to identify the calling Centrex primary or primary semi-restricted line by number when calls are placed over outgoing WATS lines.
- c. Lines from another PBX or Centrex that access the outgoing WATS lines by using tie lines or special access voice grade channels can not be identified, only the group number will be shown.
- d. In addition to the rates and charges for Centrex IBDN shown in D.8.m. following (USOC: 53Z) the customer must subscribe to Supplemental Billing Service which is filed in Schedule Cal.P.U.C. No. A10.5.1. Supplemental Billing Service is required for each WATS bill arranged for Centrex station line identification.
- e. When a WATS billing number is changed, the one time charge will be equivalent to the one time charge for IBDN as shown in D.8.m. following.
- f. Centrex systems that are equipped with IBDN cannot be arranged for Sectional Billing.

25. Selective Route Advance (SRA) Service - #5 X-Bar Type Centrex

- a. SRA is offered with #5 X-Bar switching equipment where the office may be suitably equipped and where the capacity of the office is sufficient to provide SRA without affecting other services.
- b. SRA is a Centrex feature designed to select the most economical route at any given time for a dialed call over a customer's available WATS access line service. A call will attempt to complete over a maximum of three such routes, and if these are found to be busy, will complete over the local trunks furnished with the Centrex service. SRA is activated by dialing a single access code followed by the 10-digit telephone number.

- (1) Certain types of calls, will always complete over the local trunks of the Centrex service such as: operator-handled calls and calls within the local calling area.

25. Selective Route Advance (SRA) Service - #5 X-Bar Type Centrex (Cont'd)

b. SRA is a Centrex feature designed to select the most economical route at any given time for a dialed call over a customer's available WATS access line service. A call will attempt to complete over a maximum of three such routes, and if these are found to be busy, will complete over the local trunks furnished with the Centrex service. SRA is activated by dialing a single access code followed by the 10-digit telephone number. (Cont'd)

(2) Where SRA is furnished, all calls placed via the SRA access code will complete over WATS or the exchange trunks furnished with the Centrex service.

(3) Where the customer has other private facilities, such as foreign exchange, CCSA off-net, etc., calls over these facilities are placed by accessing their appropriate discrete access code.

c A route is a WATS access line (by band or service area) used to complete direct dialed calls. A route may consist of one or more lines of the same type of facility used to complete 10-digit telephone number calls.

d. Preferred routes and alternate routes may be specified by the customer.

e. Detail of calls completed over WATS access lines by means of the SRA feature may be provided as shown in Schedule Cal.P.U.C. No. A10.5.1, Supplemental Billing Service, except where the customer subscribes to Sectional Billing with the Centrex service.

26. Foreign Exchange and Foreign Prefix Centrex Service

a. Foreign Exchange Centrex Service

- (1) Foreign Exchange Centrex Service provides service from a contiguous and non-contiguous exchange or district area other than the exchange or district area in which the customer's primary location (as defined in Schedule Cal.P.U.C. No. A2.1.1) is located.
- (2) Foreign Exchange Mileage Rates are in addition to rates and charges for Centrex Service as shown in this schedule. Foreign Exchange Mileage Rates apply to all Centrex station lines and to special access voice grade channels that are required for each attendant position and associated equipment. To determine the Contiguous Foreign Exchange Mileage, the distance will be measured from the customer's primary location to the nearest point on the common exchange/district area boundaries. To determine non-contiguous mileage, distance will be measured from rate center to rate center.
- (3) If special access channels other than voice grade are required for the operation of the attendant positions and associated equipment, apply appropriate mileage rates as shown in Schedule Cal.P.U.C. No. A10.2.
- (4) Foreign Exchange Centrex Service will only be offered where facilities and operating conditions affecting transmission, signaling and timing characteristics permit.
- (5) No foreign exchange business message or dollar allowance will be given to Centrex lines.
- (6) Message Usage and Allowances will apply as shown in Schedule Cal.P.U.C. No. A5.3.
- (7) Only one free directory listing will be offered for the Listed Directory Number (LDN), it will appear in the telephone directory that covers the exchange from which the Foreign Exchange Centrex Service is served. Additional Listings may be provided at rates as shown in Schedule Cal.P.U.C. No. A5.7.1.

27. Metropolitan Centrex Service

a. Metropolitan Centrex service consists of a group of two or more Centrexes or a combination of Centrexes and Compatible Customer Provided Systems furnished to a single customer that are associated with each other. A unified Centrex service is provided through the use of associated dialing patterns at each Centrex, access to attendant facilities, dedicated connecting circuits between the various primary Centrex services, special call transfer treatment and dialed access to other special features.

(1) In a Metropolitan Centrex arrangement there are typically one main and the remainder secondary Centrexes or Compatible Customer Provided Systems.

(2) Connecting circuits referred to in rates and charges are priced in accordance with rates, charges and regulations applicable to tie lines, special access voice grade channels or miscellaneous voice grade signal channels as shown in Utility's applicable tariffs.

27. Metropolitan Centrex Service (Cont'd)

d. The difference between types of Metropolitan Centrex Service identified in b. above occur with respect to how features shown in D.8.i. following, are used in conjunction with other available features.

e. Attendant positions are located at:

(1) Main Centrex with Main Satellite Centralized Attendant Centrex services. (No attendant positions at secondary Centrexes.)

(2) Each main and secondary Centrex with Multi-location Centrex service. In some Multi-location configurations, the customer may elect not to have attendant positions at a secondary location.

f. Listed Directory Number (LDN) and direct-inward-dialed (DID) calls enter at:

(1) Main Centrex with Main Satellite Centrex service.

(2) Each main and secondary Centrex or Customer Provided System with Centralized Attendant and Multi-location Centrex service.

g. Direct-outward-dialed (DOD) calls leave each main and secondary Centrex with Main Satellite, Centralized Attendant and Multi-location Centrex services. When a Customer Provided System is used with Centralized Attendant Service, DOD calls can be placed from it. A secondary Centrex may use trunks of the main Centrex for DOD calls with Main Satellite Centrex Service instead of DOD trunks at the secondary Centrex.

C. OPTIONAL FEATURES (Cont'd)

27. Metropolitan Centrex Service (Cont'd)

h. Implementation of the three basic call transfer features between main and secondary Centrexes or a Customer Provided System is provided in accordance with the following: (Cont'd)

(3) Centrex service with the Call Transfer-Individual-All Calls or Universal Call Transfer option permits add-on, consultation hold and transfer of more calls types but does not permit dial transfer on all possible station calls.

- The stations at the main and secondary Centrexes may be rotary and/or Touch-Tone.

i. Where Metropolitan Centrex Service is furnished, the customer may not combine attendant and station transfer for primary stations within the same Centrex service (as described in Regulations A.1.a.,) at main or secondary Centrexes.

j. In Metropolitan Centrex Service the basic numbering plan may require uniform numbering throughout all the switching machines. Stations of one of the Centrexes may dial stations of another without having to dial a special access code. Stations dial the same number of digits to reach each other.

k. Where Listed Directory Number (LDN) trunks terminate in secondary Centrexes or Customer Provided Systems not equipped with attendant positions:

(1) The LDN trunks will be furnished as a group of trunks separate from the local trunk facilities of the Centrex service and rated in accordance with rates and charges shown in Schedule Cal.P.U.C. No. A5.3.

(2) The LDN trunks are extended to the attendant position at the main Centrex via connecting circuit facilities.

(3) The attendant can distribute calls to stations at main and secondary Centrexes or Customer Provided Systems. Release link operation is available with Centralized Attendant Centrex service.

l. Attendant assistance calls from stations may be routed to an attendant at a remote location and then on to other facilities furnished at that remote location Centrex, such as OUTWATS, CCSA access lines, etc.

C. OPTIONAL FEATURES (Cont'd)

27. Metropolitan Centrex Service (Cont'd)

- m. Optional features and supplemental service will be provided in accordance with charges, rates and regulations in Utility's applicable tariff schedules.
- n. Where other equipment arrangements and facilities are requested for use with Metropolitan Centrex Service they will be provided at rates and charges shown in Utility's applicable tariffs except where additional costs are involved. In that case they will be subject to prior authorization of the Public Utilities Commission of the State of California.
- o. Charges for changes and rearrangements in the configuration of service features and facilities used with Metropolitan Centrex Service shall be in accordance with Utility's tariffs appropriate to the specific service features and facilities involved or in accordance with the provision of Schedule Cal.P.U.C. No. A3.1.

28. Uniform Call Distribution (UCD) ESS

- a. The UCD feature is furnished at the rates and charges as shown in D.8.n. following, which are in addition to other charges and rates for Centrex service. It permits even distribution of incoming calls over a group of lines arranged for hunting when the assigned number of the hunting group is called. It is available to a customer whose Centrex service is furnished by use of a ESS central office equipped with the required call processing and feature capacity and where operating conditions permit.
 - (1) 800 Service, Foreign Exchange Trunks and Tie Line/Special Access Voice Grade Channels may be terminated in the UCD for incoming calls. The incoming calls will be routed directly to the UCD pilot number via 800 Service and Foreign Exchange Service when the UCD is arranged for queueing¹.
 - (2) Lines furnished in a group may consist of primary, primary restricted or primary semi-restricted or any combination of such lines provided in D.4. following.

(L)

NOTE 1: If all station lines and queue are busy, calls will ring without an answer.

(L) Formerly in Schedule Cal.P.U.C. No. A9.

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

28. Uniform Call Distribution (UCD) ESS (Cont'd)

a. The UCD feature is furnished at the rates and charges D.8.n. following, which are in addition to other charges and rates for Centrex service. It permits even distribution of incoming calls over a group of lines arranged for hunting when the assigned number of the hunting group is called. It is available to a customer whose Centrex service is furnished by use of a #1ESS central office equipped with the required call processing and feature capacity and where operating conditions permit. (Cont'd)

(3) When UCD is furnished to a group of lines, certain features are unavailable and others, if requested, must be provided to all lines in the group.

- Features unavailable in the UCD hunting group:

Call Forwarding - Variable, Busy Line and Don't Answer.
Call Pickup.
Call Waiting - audible indication.
Directed Call Pickup.

- Features limited in the UCD hunting group. When these features are requested, they must be furnished to all lines in the group at the appropriate rates.

Call Hold
Speed Calling (6, 30 and customer changeable)

b. Queueing - Queueing is an option that may be added to the UCD arrangement. Queueing permits calls, in excess of available lines in a UCD group, to be held in the central office and distributed in their order of arrival to lines in the UCD group as the lines become available.

D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

28.1 Uniform Call Distribution (UCD) - Digital Switching Systems (DSS)

UCD-DSS distributes calls evenly to Centrex primary, semi-restricted or interior lines (Centrex lines), provided service is from a central office switching system. The UCD-DSS feature offering is furnished at the rates and charges as defined in D.8., following.

The UCD Group may contain up to a maximum of five primary system telephone numbers. These numbers may be associated with local telephone numbers (same central office), foreign exchange trunk numbers, 800 service numbers, Special Access Voice Grade Channels numbers or any combination of such numbers. Local telephone numbers are included in the UCD Group rate. The rates and charges associated with Foreign Exchange Trunks, 800 Service and Special Access Voice Grade Channels are in addition to the rates and charges applicable to the UCD Group. Charges apply as defined in their respective tariff schedules.

Calls to the assigned telephone numbers within the UCD group are distributed to Centrex lines equipped with the UCD line feature, provided the Centrex lines are activated to receive calls. Centrex lines arranged for UCD operation may activate any UCD group within their Centrex system and receive calls from that group. If no UCD Centrex lines are activated to receive calls from a UCD group, the UCD will direct the calls to a predetermined number.

UCD activation does not prevent Centrex lines from originating or receiving calls normally.

Queueing is a standard feature arrangement to the UCD and permit calls, in excess of available lines, to be held in the central office and distributed in their order of arrival. Customers may arrange for a delay announcement and/or music or silence in queue at the rates and charges defined in D.8., following.

C. OPTIONAL FEATURES (Cont'd)

28.1 Uniform Call Distribution (UCD) - Digital Switching Systems (DSS)

UCD-DSS is furnished under the following conditions:

- a. A maximum of 1024 or 2048 Centrex lines may be activated to a UCD group at any one time where the central office is suitably equipped.
- b. Centrex lines may be activated to only one UCD group at any one time.
- c. Centrex lines that are equipped with UCD may not be arranged for hunting.
- d. Call Forwarding on a Centrex line with UCD-DMS is not available to calls to the UCD group. However, Call Forwarding is available to the Centrex line.
- e. Telephone numbers within the UCD-DMS group are assigned one of four priorities, as selected by the customer. Calls are directed from the queue based on the order received and priority selected.
- f. With UCD-DMS the number of calls that may be in queue is constantly changing and is automatically assigned in the software based on the expected number of activated lines.
- g. The number to which calls are forwarded on a night service arrangement or "no attendant" basis must be within the same serving central office or provided within a Centrex tie line group.
- h. The nonrecurring charges as shown in D.8. following, do not apply when customers change from a UCD-ESS to a UCD-DSS due to a central office conversion.

C. OPTIONAL FEATURES (Cont'd)

29. Most Economical Routing (MER) - #2ESS Type Centrex (Cont'd)

c. A route consists of lines which are used to complete calls originated by a station user of the Centrex Service. The following type of service may be included as routes:

- (1) WATS access line (by band or service area)
- (2) CCSA line
- (3) Foreign Exchange Trunk Line
- (4) Message Telecommunications Service¹

A route may consist of one or more lines of the same type of service by which the customer may reach a 7- or 10-digit telephone number.

d. When DDD is used as a route, it must be the last choice. When all routes have been examined and are found busy, the calling station user receives reorder tone.

e. A pattern is a route sequence with a maximum of four routes to be followed in completing a call. The number of patterns a customer requires is governed by types of services to which a customer subscribes.

30. Station Message Detailed Recording on Tie Trunks and Foreign Exchange
(SMDR-TAMA)

a. SMDR-TAMA is an arrangement to provide an Automatic Message Accounting (AMA) record, by line number, attendant (LDN) and tie line/special access voice grade channel identifying number of originating calls that are placed over a foreign exchange trunk, tie line and/or special access voice grade channel. The record of calls will be provided on a magnetic tape when the customer subscribes to Supplemental Billing Service in Schedule Cal.P.U.C. No. A10.5.1.

b. The AMA record will provide the following call detail:

- Calling Number (The number of the line, attendant or incoming Tie Line/Special Access Voice Grade Channel)
- Called Number (1-24 digits)
- Connect Time
- Disconnect Time
- Date

c. SMDR-TAMA is available only from central offices which are suitably equipped and facilities and operating conditions permit.

C. OPTIONAL FEATURES (Cont'd)

31. Message Register Central Office Equipment Feature

The Message Register Central Office feature permits individual Centrex line local message unit or zone calling Zone 1 and Zone 2 (ZUM) unit data to be stored in the memory of the switching equipment entity. Upon request from an inquiry and display station at the customer's premises, the accumulated local message units or zone calling Zone 1 and Zone 2 (ZUM) units used by a Centrex line are indicated on a numeric light-emitting diode (LED) display and, optionally, on a printer.

This message registration feature will not be provided simultaneously with mechanical registers in the same customer Centrex service.

32. The customer-controlled line status feature permits designated Centrex lines to be placed in or changed to any one of four conditions:

- a. Normal primary station line status.
- b. Outward call restricted. Any attempt the station user makes to dial a call outside the Centrex service will be intercepted and routed to an announcement, reorder tone or to the Centrex attendant (see below).
- c. Inward call restricted. All incoming calls to the station line will be intercepted and routed to an announcement, the attendant of the Centrex or to a night service number (see below).
- d. Outward and Inward calls restricted as shown in b. and c. above.

Line status is controlled by the customer inputting control codes using the keyboard of the inquiry and response station. Where desired, the attendant or designated stations equipped with Touch-Tone Calling Service may be used to activate this feature.

- Where the customer wishes to change the status of groups of lines, use of the optional printer with the 90A CPS station is recommended.

When the status of a line requires outward or inward calls to be intercepted, the designated intercept arrangement will be provided at rates and charges shown following.

C. OPTIONAL FEATURES (Cont'd)

33. Station Call Thru Test (SCTT)

SCTT allows a uniquely identified Centrex station to perform call thru test maintenance to verify the operations of specific trunks within a Centrex, AIS or ETS trunk group.

Types of trunks included:

- Tandem Tie Trunks
- Tie Trunks
- Network Access Trunks
- Two-way or Outgoing Foreign Exchange Trunks
- Inter-machine Groups (including Carrier Access Groups).

Station Call Thru Test and Busy Verification Test (SCTT/BVT)

In addition to the SCTT feature defined above, SCTT/BVT allows a uniquely identified Centrex station the ability to perform busy test maintenance on the types of trunks listed above.

34. Centrex Management Service (CMS)

- a. CMS is an optional service offering which includes a Basic Control Package (BCP). CMS/BCP, hereinafter referred to as CMS provides the ability to manage and control line and feature rearrangements of Centrex service without the need to utilize standard service order procedures through the Utility's business office. (T)
(T)
(N)
(N)

CMS subscribers can request existing station line and feature changes by accessing their data base via a customer computer. CMS offers a set of menus and screens to guide the customer through programs to create, generate and define facility management reports. CMS allows customers to maintain records, produce and define reports associated with their Centrex telecommunication facilities, which includes but is not limited to, lines, features, equipment, location. C. OPTIONAL FEATURES (Cont'd)

35. Reseller Remote Access Service (RRAS)

- a. RRAS is a Utility provided Central Office service that enables end users, at a remote location, unattended access to the Reseller's Centrex-CO/Electronic Tandem Switching (ETS) exchange network.

The RRAS is activated by dialing a designated number. The remote caller then obtains access to the Centrex-CO services normally available to an on-premises or local station user. Users can access the RRAS from residence, business, mobile or coin type exchange services.

- b. Resellers with Centrex-CO/ETS services may arrange for RRAS with or without option capabilities.

Available Options:

(1) Security Code:

The RRAS can be programmed to require that callers enter a three-digit security code to access the Centrex-CO services. This code is selected by the subscriber, and assists in control of toll abuse.

(2) Call Time Out:

The Call Time Out option limits the duration of calls placed through the RRAS by causing automatic disconnection after 5, 10, 15, or 20 minutes. The caller hears a warning tone 20 seconds before disconnection.

(3) Tone to Pulse Conversion:

This option enables the RRAS to convert dual tone multifrequency (DTMF) signals to rotary dial pulses so that callers can access rotary dial services within or outside of the Centrex-CO system.

(4) No Options Used:

The RRAS is equipped with options capability; however, options are not activated.

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

36. Centrex Direct Connect

Centrex Direct Connect allows Centrex station lines to automatically place a call to a preassigned called number when the station user goes off-hook. The direct connect station receives calls normally.

37. Executive Busy Override

The Executive Busy Override feature allows a Centrex station to gain access to another busy Centrex station. The called station receives a warning tone, then the connection is completed as a three way call. The originator and the terminator must be in the same Centrex.

38. Executive Busy Override Exempt

Executive Busy Override Exempt gives the Centrex station user the ability to block access from the Executive Busy Override feature (See 37., preceding).

39. Group Intercom

Group Intercom allows a Centrex station to establish a talking path, using abbreviated dialing, to another station of a predesignated intercom group. The group size can be from 10 to 10,000 members. The station can belong to multiple intercom groups.

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

40. Make Set Busy

Make Set Busy permits a Centrex station user to make a Centrex station set busy to incoming calls. The Make Set Busy station can place outgoing calls normally.

41. Network Speed Calling

Network Speed Calling is available in the DMS-100 type central office only. Each switch provides at least 1000 network speed call numbers which can be assigned both on-net and off-net numbers defined by the customer through detafill. The DMS-100 switching equipment will support a mixture of 2 and 3 digit speed call numbers plus an access code.

42. Last Number Redial

Last number Redial enables the originating Centrex station user to redial the last number called without having to enter the called party's entire telephone number.

43. Call Park

The Call Park feature allows a Centrex station user to park a call against its own directory number. The call may then be retrieved from another station.

D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

44. Electronic Telephone Features

The Electronic Telephone Features provides Centrex primary station lines with the following central office features:

Non-Display and Display:

a. Virtual Directory Number - Multiple Appearance

A directory number that is assigned to more than one Centrex station is called a Virtual Directory Number - Multiple Appearance (Multiple Appearance Directory Number (MADN)). This feature permits a Centrex station line to have a secondary appearance on another customer provided instrument and optional features may be provided at the Rates and Charges shown in D. following.

The Centrex stations that are assigned this directory number are known as a MADN group. MADN groups can be comprised of up to 16 stations and configured in either Single Call Arrangement (SCA) or Multiple Call Arrangement (MCA).

- SCA allows only one station to be active, either originating or terminating, on the MADN at any given time.
- MCA allows more than one station in the MADN group to be active simultaneously.

b. Privacy Release

This feature is used to establish a conference call among MADN-SCA members and an external party.

c. Automatic Answer Back

The Automatic Answer Back Feature allows any incoming call to the primary station line to be automatically answered after four seconds. When the calling party hangs up, the call is automatically disconnected.

C. OPTIONAL FEATURES (Cont'd)

44. Electronic Telephone Features (Cont'd)
Non-Display and Display: (Cont'd)

d. Automatic Dial

Automatic Dial allows Centrex station users to program and call a frequently dialed number by depressing a single assigned feature key.

e. Intercom

The intercom feature allows a Centrex station user to directly terminate on another predesignated station within the same Centrex System.

f. Virtual Directory Number - Primary (VDN-P)

The VDN-P feature allows a primary Centrex station equipped with compatible premise equipment the capability of an additional Centrex station line. Features assigned to the primary Centrex station are available to the VDN-P at the rates and charges as shown in D.following.

g. Key Short List

Permits incoming calls to hunt over a set of Directory Numbers (DN) appearing on the keys of a compatible customer provided electronic multi-button telephone.

h. Fast Transfer

Provides call transfer with transfer on release, which enables an Electronic Business Set user to transfer calls from the consultation state.

i. Repeated Alert

Alerts the Electronic Business Set user that another incoming call has terminated on the set and that a caller is waiting. Multiple warning tones are generated on an active Electronic Business Set and the corresponding directory number indicator flashes. Not compatible with Call Waiting.

44. Electronic Telephone Features (Cont'd)
Non-Display and Display: (Cont'd)

j. Last Number Redial-Set

Allows the Electronic Business Set user to redial the last number called from the set, regardless of which number on the set placed the call. Not compatible with Last Number Redial.

Display Only Features

a. Feature Display

The Feature Display component provides the Centrex station, equipped with optional 32-Character Alphanumeric LCD, with a visual display of the called number during origination, termination, programming, and feature activation operations. The customer must specify through datafill whether incoming inter-customer group calls will be displayed. If no selection is made, the default will not display inter-customer group calls.

b. Query Time and Day

This feature provides the current time and date on a customer provided display telephone.

c. Call Forward Reason Display

Messages are displayed to inform the caller of the reason for a call being forwarded.

C. OPTIONAL FEATURES (Cont'd)

45. Attendant Console Feature Package includes:

a. Attendant Access To Paging

Allows an attendant to gain access to customer-provided loudspeaker paging equipment to summon a particular person over speakers located throughout the customer's premises. Also provides a preempt capability allowing an attendant to force-release a calling party from a loudspeaker access. A special access voice grade (VG32) channel to the customer's premises is required (as set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3,(A)(B).

b. Attendant Autodial

Permits an attendant to dial frequently called numbers by depressing the autodial feature key, which is programmed with the number. Depressing this key has the same consequences as dialing the digits manually.

c. Attendant Call Park Recall Timer

Provides a separate timer for calls parked by the attendant. The timer defines the maximum time period that a call can spend in the parking lot. If the call is not retrieved or abandoned within the defined time, the call is unparked and the attendant is recalled.

d. Attendant Call Selection

Enables an attendant to answer incoming calls using either of the following methods:

- In the order they are received, regardless of the incoming call type
- By manually selecting a specific incoming call type.

The attendant selects a call type by depressing a key whose associated lamp is on or flashing.

C. OPTIONAL FEATURES (Cont'D)

45. Attendant Console Feature Package includes: (Cont'd)

e. Attendant Camp-on

Allows the attendant to extend an incoming call to a busy station. When the busy station becomes idle it is connected to the waiting call.

f. Attendant Conference (6 port)

Allows the attendant to establish a six-port conference call (not including the attendant).

g. Attendant Console Display

Assists the attendants in handling calls efficiently. The display unit is built into the attendant console. It consists of a 16-character alphanumeric display, 28 Light Emitting Diodes (LEDS) and a 28-button keyboard.

h. Attendant Control of Trunk Group Access

Allows the attendant to control the access of all stations and incoming trunks to various trunk groups by operating corresponding keys.

i. Attendant Locked Loop Operation

Allows an attendant to hold a call on loop. Attendant locked loop operation consists of two hold types, manual and automatic.

When either type of hold is activated, the call does not remain physically connected to the loop, but the loop is not available for new call arrivals. The holding (or locking) condition allows the attendant to enter a connection previously held on one of the loops.

45. Attendant Console Feature Package includes: (Cont'd)

j. Attendant Release Upon Completion of Dialing

Allows an attendant to extend a call to a trunk of a Plain Ordinary Telephone Service (POTS) trunk, then release the call after the dialing is completed and before outpulsing to the trunk is completed.

k. Attendant Speed Calling

Allows an attendant to dial frequently dialed numbers by depressing a speed call key and dialing one or two digits instead of all digits in the number.

l. Attendant To Recorded Announcement

Permits the routing of attendant calls, originated or extended, to an announcement.

m. Attendant Transfer

Allows a call that is transferred by a station to the attendant by either flashing or by flashing and dialing zero is queued on a first-in, first-out basis.

n. Automatic Recall

Used for attendant-extended calls to stations served by the switch. Applies to calls held on the loop and calls that the attendant releases from the console after keying the station number or destination number.

When the recall timer expires, the unanswered call is queued for an attendant console if the call was previously released from the console.

C. OPTIONAL FEATURES (Cont'd)

45. Attendant Console Feature Package includes: (Cont'd)

o. Busy Verification (stations/trunks)

Allows an attendant to determine whether stations or trunks are busy or idle.

Busy Verification, Stations - When a station is busy, the attendant can barge into the busy connection and request the station users to go on-hook (this break-in is performed when it is necessary for the attendant to speak to a station user).

Busy Verification, Trunks - If no restrictions apply to accessing toll when a calling station user receives reorder tone while attempting to place an important call, the attendant may assist the user by using the busy verification - trunks feature to place the call.

p. Call Hold (attendant)

Allows an attendant to manually hold a call on the loop by depressing the hold/release key, or automatically hold the call on the loop by depressing another loop key.

q. Call Park (attendant)

Allows the attendant to park calls against any directory number in the attendant customer group.

r. Console Test

Allows an attendant or maintenance personnel to test the functional operations of a console.

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

45. Attendant Console Feature Package includes: (Cont'd)

s. Delayed Operation

Allows an attendant to place a call for a calling station while the calling station waits on-hook. When the called station answers, the attendant can recall the calling station by depressing the signal source key. On answering, the calling station and the called station are connected.

t. Interposition Calls and Transfers

Allows an attendant to call and speak to another attendant and to transfer a call to another attendant.

u. Local/Remote Consoles

Local - Allows one large customer group to be served by up to 255 attendant consoles, or by one or more attendant consoles can be assigned per customer group. Calls are queued on a first-in, first-out basis for attendant handling.

Remote - Provides for attendant subgroups which permits multi-location customers to have attendant-type calls answered locally. For example, a customer may have a number of locations, each with its own listed directory number, served by the same switch.

v. Lockout

Restricts an attendant from reentering a call on a held loop unless recalled by a station user or by automatic recall.

w. Multiple Console Operation

Allows for the assignment of multiple consoles to the same customer group, these can be in one location or in multiple locations.

C. OPTIONAL FEATURES (Cont'd)

45. Attendant Console Feature Package includes: (Cont'd)

x. Multiple Listed Directory Numbers

Allows a customer to have many listed directory numbers. To handle this efficiently, each number has a unique lamp so that the attendant can answer appropriately.

y. Night Service Fixed/Flexible

Provides for the handling of calls when the attendant is absent. It is usually activated after regular hours and on weekends.

Fixed - Calls that are normally routed to the attendant during the day are routed to recorder tone or an announcement during night service.

Flexible - Allows attendant to program the night service routes for each incoming call identification classification assigned to the customer group.

z. Night Service Trunk Answer From Any Station

Allows any station in the customer group to answer an incoming call by dialing a code. The code is dialed when Trunk Answer From Any Station (TAFAS) alerting device sounds.

To answer a call, the station user goes off-hook, receives dial tone and dials an access code. The audible signals are silenced and the answering station is connected to the calling party. The answering station may complete the call by call transferring.

A Metallic channel from Schedule Cal.P.U.C. No. 175-T, Section 7.5.1 is required for customers of record prior to January 1, 1995 (see Regulation A.1.aa. preceding). A Special Access Voice Grade Channel as set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3 is required for customers subscribing to this service on or after January 1, 1995.

45. Attendant Console Feature Package includes: (Cont'd)

aa. Position Busy

Allows the attendant to make the console unavailable to additional queued calls.

ab. Secrecy

Allows the attendant to talk to a called party (destination) without the calling party (source) hearing the conversation.

ac. Serial Call

Allows an attendant to extend a call to more than one station.

ad. Straightforward Outward Completion

Allows a station user in a customer group to have the attendant extend a call outside the customer group.

ae. Switched Loop Operation

Allows each console to be assigned one through six loops to provide the attendant with voice access to all calls routed to the console even though trunks and lines do not have direct termination on the consoles (virtual loop concept).

af. Trunk Group Busy/Trunk Group Access Through Keys

Provides special keys to serve as a common interface for trunk group busy and trunk group access control for all trunk groups allocated to the customer group.

ag. Through Dialing

Allows the attendant to select the trunk facility for a station in the same customer group and send dial tone to the station user. The station user then dials the called number.

Allows for the displaying of trunk group status on the attendant console.

ai. Two Way Splitting

Allows the attendant to talk privately to either the calling party or the called party. The attendant can alternate between the source and the destination as required.

aj. Uniform Call Distribution From Queue

Provides for a uniform distribution of calls from the attendant queue to a group of attendant consoles. As the consoles become idle, incoming calls are distributed on a first-in, first-out basis.

ak. Wild Card Key

Allows the attendant to use the wild card key to invoke special features not directly available through a feature key on the console. Any special feature normally available through the use of a feature key may be invoked through the wild card key.

al. Answering Incoming Calls

Allows the attendant to identify an incoming call by a repetitive alerting tone and a flashing attendant lamp

am. Attendant Activation of Station Call Forwarding

Allows the attendant to activate/deactivate call forwarding for any station or extension with Call Forwarding Variable that is within the same Business Group as the attendant.

45. Attendant Console Feature Package includes: (Cont'd)

an. Attendant Camp-On

Allows a call directed to a busy station to wait for the line to clear. When the busy station becomes idle, it is connected to the waiting call.

ao. Attendant Conference Calling

Allows the attendant to set up conference calls with a maximum of six parties (including the attendant).

ap. Attendant Control of Voice Terminals

Allows the attendant to assign restrictions on originating calls, terminating calls, or both for specific stations or groups of stations. The customer may have a maximum of 63 groups; each group can contain from 2 to 128 directory numbers. Only one restriction can be activated on a directory number at any give time.

aq. Attendant Emergency Override

Allows the attendant to place calls to a station that has terminating restrictions imposed, activated Call Forwarding or on a make-busy key indication.

ar. Attendant Facilities Management

(1) Attendant Busy Verification of Lines/Trunks

Allows the attendant to verify if the line or trunk is busy or there is trouble in placing a call.

(2) Attendant Call-Through Tests

Allows the attendant to determine if a specific trunk is functioning properly by setting up a test call.

(3) Attendant Control of Facilities

Permits an attendant to restrict dial access to specific facilities. Calls attempting to use restricted codes are routed to the attendant, a recorded announcement or to intercept treatment, which is determined by the customer at the time of subscription.

(4) Attendant Direct Trunk Group Selection

Permits the attendant to select an idle trunk in a specified outgoing trunk group without dialing the trunk access code.

(5) Attendant Selective Customer Control of Facilities

Allows the attendant to restrict access to a trunk or a simulated facility group. The calls may be routed to a tone, to an announcement or intercepted by the attendant which is determined by the customer at the time of subscription.

(6) Attendant Trunk Group Indicators

Allows the attendant to monitor the level of traffic on customer selected trunk groups. Each attendant position is capable of monitoring a different set of trunk groups. Two trunk indicators, busy and warning, are provided per trunk group. These indicators are based on traffic thresholds. The attendant is notified if the thresholds are exceeded or if the traffic levels recede below the thresholds.

C. OPTIONAL FEATURES (Cont'd)

45. Attendant Console Feature Package includes: (Cont'd)

as. Attendant Originating a Call

Enables an attendant to originate calls to extension numbers of system users and to numbers outside the system. The calls are originated by using one of the six call appearance keys provided on the console for originating and receiving calls. Calls may also be originated by using the direct station selection button or the direct trunk group selection buttons.

at. Attendant Position Busy

Enables the attendant to make the console unavailable to additional calls.

au. Attendant Timed Reminder

Alerts the attendant that a call needs attention after a customer specified period of time. Calls that activate this feature are:

- Held Calls
- Camped-On Calls
- Transferred Calls not Answered

av. Attendant Releasing a Call

Allows an attendant console to release from a call in the following four ways:

- Release
- Release Loop
- Forced Release
- Cancel

aw. Attendant Traffic

Provides the following traffic counts for each attendant console position:

- Number of calls handled by the position
- Number of minutes the position has been active
- Aggregate work time of the position

ax. Attendant Through Dialing

Allows the attendant to access an outgoing facility for a calling party within the group who has restrictions or difficulty in placing an outgoing call.

ay. Auto Dropback to ISDN Attendant

Enables an attendant to complete a call from an incoming trunk to multiple stations without requiring the called party to redial the attendant. When the called party disconnects, the attendant can be recalled and the calling party may give further instructions for the next call. Auto dropback calling can also be used by station callers to place a series of calls over an outgoing trunk.

az. Attendant Busy Verification of Lines and Trunks

Enables an attendant to determine if a directory number of a trunk is busy or if there is trouble in placing a call. This feature requires that the line be associated with an attendant business group.

ba. Attendant Call Splitting

Allows the attendant to consult privately with either the calling or the called party without the other party hearing. The attendant can alternate between calls or join both parties in a three-way call before deciding to complete or terminate the call.

bb. Feature Buttons

Allows features to be accessed by assignable buttons on a console.

bg. Emergency Access to Attendant

Allows the attendant to provide priority handling of emergency calls. The station user dials an emergency access code that signals the attendant with special alerting.

bh. Flexible Night Service/Attendant Call Forwarding

Flexible Night Service routes calls normally directed to the attendant group to a different location. Routing may be provided in one of the following ways:

- Fixed: All calls are routed to a preselected night directory number.
- Trunk Answer From Any Station: All calls activate a night bell or other indicator so that calls may be answered at any station by dialing an access code for the call pickup feature.
- Flexible: The attendant call forwarding feature is used to selectively route all calls to a different customer changeable night directory number.

Attendant Call Forwarding allow the attendant to activate/deactivate call forwarding for any station or extension with call forwarding variable assigned that can be controlled from the attendant console.

bi. Attendant Information About Calls in Queue

Provides the following information per console:

- Total number of calls that have been served.
- Total number of calls in queue that were abandoned before being served.
- The longest time a call has been in queue before being served.
- Queue usage which can be used to derive average time in queue for served calls and average time in queue for calls that were abandoned before being served.

Allows the attendant to identify which restrictions are applicable on a line for a call that has been routed to the attendant. The restrictions (originating permissions) that can be displayed are as follows:

- Unrestricted - The station can place any call.
- Toll Restricted - The Station can place any call except a toll call.
- Semi-Restricted - The station can call any station in the same business group or the attendant.
- Fully-Restricted - The station can call any station in the same business group.

bo. Electronic Directory Service

Provides access to a customer provided on-line directory data base stored on an applications processor accessible from station sets within the customer group.

bp. Fixed Feature Buttons

Provides one fixed feature button. The Split feature button must be assigned to button 128 on the Attendant Console.

bq. Attendant Power Failure Transfer

Routes calls for the attendant to a predetermined directory number during communication failures at the customer location or loss of power to the attendant console. This feature is only available with fixed night service.

C. OPTIONAL FEATURES (Cont'd)

46. Station Call Request

Permits a station user to dial a code to access another station user or attendant who has activated message waiting. This feature will also allow the station user to activate message waiting for another station. This feature use is called Station Call Request. Station Call Request uses message queuing to indicate to another station user that a message is waiting and a call back is required. Station Call Request is provided with:

a. Stutter Dial Tone

Stutter Dial Tone permits stations to be notified that a message is waiting. Stutter dial tone takes the place of regular dial tone upon call origination if a message is queued for the station. Stutter Dial Tone is defined as 160 millisecond of dial tone followed by 160 millisecond of silence - repeated.

or

b. Electronic Business Set Call Request

Provides a message indicator on an electronic business set. The visual message indicator alerts the station user that a call back is required to either a Message Center attendant or to another station that has requested a call back.

or

c. Message Waiting Lamp

The line is equipped to provide users of suitably equipped telephone instruments with a visual indication that a message is being held at a message center or another station. When a message is queued for a station, the lamp will flash at 60 IPM.

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

48. Forwarded Call Information

- a. Forwarded Call Information is an optional feature available to Centrex-UCD subscribers. It provides information about the origin and destination of a forwarded call. Rates, charges and regulations apply as shown in D., following.
- b. Forwarded Call Information is rendered in data format and received at a customer provided data modem via a special access voice grade (VG36) channel, as defined in Rates and Charges, Schedule Cal.P.U.C. No. 175-T Section 7.5.3,(A)(B).

The data format includes:

- Called station number
- Originating station(s) number for intra-system calls
- Code for type of Call Forwarding feature used
- Indication of line call was forwarded to
- Indication of Centrex UCD involved

Central Office limits and capacities:

1AESS and DMS-100 Central Offices

- 64 UCD per interface
- 1200 baud transmission rate
- 1 interface per I/O channel
- 64 I/O channels per Central Office

5ESS Central Office

- 1 Applications Processor Interface per 3A translator
- One 3A translator per network termination
- 1 UCD system per network termination
- Twenty-five 3A translators per switch module
- 1200 baud transmission rate

The customer is responsible for providing compatible premises equipment and data modem in order to utilize the Forwarded Call Information feature.

C. OPTIONAL FEATURES (Cont'd)

48. Forwarded Call Information (Cont'd)

c. Automatic Dial Back-Up is an optional feature available to Centrex Forwarded Call Information subscribers. It provides back-up capability to a special access voice grade (VG36) channel as set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3,(A)(B) equipped with an Anderson Jacobsen 2443 modem. When the modem detects a failure in the special access voice grade (VG36) channel the Automatic Dial Back-Up capability will automatically complete calls over the public switched network by utilizing two (2) Individual Line Measured Rate Business Service (1MB) (one located in the central office and one located on the customer premises) at rates and charges as set forth in Schedule Cal.P.U.C. Nos. A3. and A5. Calls are subject to the appropriate charges for local and toll messages.

The customer is responsible for providing compatible premises equipment in order to utilize the Automatic Dial Back-Up feature.

D10. CENTREX

10.1 CENTREX (Cont'd)

49. Message Waiting Indicator (MWI)

Message Waiting Indicator (MWI) is a companion feature to Forwarded Call Information. Customers subscribing to MWI either hear an audible interrupted dial tone and, where facilities permit have an indicator lamp on appropriately equipped customer provided equipment indicating there is a message waiting for the subscriber at the message center. The customer can call the message center for his/her message or ignore the signal and place a call; MWI will continue until the message has been retrieved and a signal is received by the Forwarded Call Information feature.

50. Centrex ISDN (Centrex Integrated Service Digital Network)

- a. Centrex ISDN is a local exchange telecommunications service that provides an integrated voice/data communications capability for the transmission of circuit switched voice, circuit switched data and packet switched data on an incoming and outgoing basis over Centrex Primary and Semi-Restricted Lines and Dormitory lines utilizing Integrated Services Digital Network (ISDN) architecture. The B channels are used for voice or circuit switched data. The D channel is used to carry signalling information for the B channels plus packet switched data¹. The service is available from specially equipped digital switching equipment located in the Utility's central offices. (T)
- b. Circuit Switched Voice provides the ability to originate and receive voice switched calls over a bearer channel.
- c. Circuit Switched Data provides the ability to originate and receive circuit switched data calls over a bearer channel.
- d. Centrex ISDN will provide the customer with the ability to integrate current voice and data channel services over the existing Centrex local loop.

NOTE 1: B & D Channel Packet is a Frozen/Grandfathered Service with the exception of B channel packet that does not connect to the DPN switch, effective June 11, 2004. See General Regulations, Schedule Cal.P.U.C. Nos. A2.1.2,A.4 and D2.6,B.

C. OPTIONAL FEATURES (Cont'd)

50. Centrex ISDN (Centrex Integrated Service Digital Network) (Cont'd)

e. Centrex ISDN provides the following central office features for customers of record prior to May 1, 1994:

(1) Basic Feature Package A

Voice Features:

Incoming Call Line Identification

Allows the called party to receive the Directory Number (DN) of the calling party within the Centrex system.

Outgoing Call Line Identification

Allows the calling party to receive the Directory Number (DN) of the called party within the Centrex system.

Time and Date Display

Displays the time and date.

Call Review

Displays call related information about any call appearance that has a call associated with it. The data that can be displayed includes call appearance identification, called or calling Directory Number (DN) within the Centrex system and incoming call identifier call type.

Calling Number ID Block

Prevents the delivery of the calling party's number identification to the receiving party within the Centrex system.

ISDN Group Intercom

Allows the customer to use abbreviated dialing for a select group of users.

Privacy

Provides privacy to prevent interruption or intervention of a Centrex ISDN voice call.

(2) Basic Feature Package B

The following features are provided in addition to (1) preceding.

Voice Features:

ISDN Group Intercom

Allows the customer to use abbreviated dialing for a select group of users.

Privacy

Provides privacy to prevent interruption or intervention of a Centrex ISDN voice call.

Calling Number ID Block

Prevents the delivery of the calling party's number identification to the receiving party within the Centrex system.

Packet Data Features¹:

(T)

Fast Select Initiate/Accept

Allows a sending data terminal to forward up to 128 bytes of data along with call setup and clearing packets. Fast Select Acceptance allows the switch to transmit incoming call packets with the fast select facility to a destination terminal that has this feature.

Flow Control Parameter Negotiation

Allows negotiation on a per call basis of the flow control parameters. This consists of automatically negotiating the maximum packet size and window size for each direction of data transmission.

NOTE 1: B & D Channel Packet is a Frozen/Grandfathered Service with the exception of B channel packet that does not connect to the DPN switch, effective June 11, 2004. See General Regulations, Schedule Cal.P.U.C. Nos. A2.1.2,A.4 and D2.6,B.

(2) Basic Feature Package B (Cont'd)

The following features are provided in addition to (1) preceding. (Cont'd)

Packet Data Features¹: (Cont'd)

(T)

Throughput Class Negotiation

Allows the calling data terminal to request specific throughput classes in the call request packet for both directions of data transmission.

Incoming Calls Barred

Prohibits a data terminal from terminating an incoming call. This feature is activated by the customer service order.

Outgoing Calls Barred

Prohibits a data terminal from originating outgoing virtual calls. This feature is activated by the customer service order.

Single Logical Channel

Allows a Centrex ISDN subscriber to specify a logical channel for packet services.

(3) Basic Feature Package C

The following features are provided in addition to (1) and (2) preceding.

Data Features:

Speed Calling

Allows the user to dial selected numbers using fewer digits than normally required.

NOTE 1: B & D Channel Packet is a Frozen/Grandfathered Service with the exception of B channel packet that does not connect to the DPN switch, effective June 11, 2004. See General Regulations, Schedule Cal.P.U.C. Nos. A2.1.2,A.4 and D2.6,B.

e. Centrex ISDN provides the following central office features for customers of record prior to May 1, 1994: (Cont'd)

(3) Basic Feature Package C (Cont'd)

The following features are provided in addition to (1) and (2) preceding. (Cont'd)

Data Features: (Cont'd)

Semi Restricted Line - Originating and Terminating

Lines can make calls to and receive calls from lines within the same terminal group including the attendant and calls over private facilities, if within the terminal group. Restricted calls are given reorder, an announcement or rerouted to another station.

Fully Restricted Line - Originating and Terminating

Lines can make calls to and receive calls from lines within the same terminal group and calls over private facilities, if within the same terminal group. Calls to and from the attendant are prohibited. Restricted calls are given reorder, an announcement or rerouted to another station.

Circuit Switched Data Call Hunting

Allows the customer to dial a single number to access a port on the host in a circuit switched implementation of multiple Basic Rate Interfaces (BRI) access to a host. This feature can hunt on individual BRIs for circuit-switched data calls.

(4) Feature Package D

The following feature is provided in addition to the voice features in (1) and (2) preceding.

Allows both B channels to be assigned voice features only. Data services are not permitted on any channel.

(5) Individual Optional Features (Cont'd)

Packets - Additional Logical Channels¹

(T)

Provides additional logical channels for B or D channel packet devices. D channel packet terminals may be equipped with Additional Logical Channels, specifying a quantity between two (2) and fifteen (15) (the first logical channel is included in Feature Packages B and C). B channel packet terminals may be equipped with Additional Logical Channels, specifying a quantity between sixteen (16) and one hundred (100) (the first fifteen are included with the B Channel Packet Service). To change the quantity of Additional Logical Channels, the Miscellaneous Change Charge as set forth in D.17. following is applicable.

Additional Call Appearance

Allows additional Call Appearances of the customer's Primary/Secondary, Shared or Multiple Directory Numbers.

Electronic Directory Interface

Provides the customer with the ability to access Electronic Directory features.

The following Electronic Directory Features are available from DSS offices:

- Auto call - Allows Centrex ISDN station users to place a call to a party associated with a query display.
- Calling Name Display - provides the name and telephone number of the calling party within the Centrex system to the called party. This feature is available to Centrex ISDN station users within the same business group.
- Directory Query Display - allows the user to query the electronic directory data base for a name using the Centrex ISDN station set.
- Query Service - allows a user to query the Applications Processor directory using a video display terminal for call and personnel information on a per customer group basis.

NOTE 1: B & D Channel Packet is a Frozen/Grandfathered Service with the exception of B channel packet that does not connect to the DPN switch, effective June 11, 2004. See General Regulations, Schedule Cal.P.U.C. Nos. A2.1.2,A.4 and D2.6,B.

e. Centrex ISDN provides the following central office features for customers of record prior to May 1, 1994: (Cont'd)

(5) Individual Optional Features (Cont'd)

Additional D Channel Packet Device¹ (T)

Additional D Channel Packet Device allows a Feature Package B or C customer to connect up to five additional packet terminals to the D channel.

B Channel Packet Service¹ (T)

Permits the assignment of a dedicated B channel for the exclusive use of transporting packet data and is only available with Feature Package C. One or both B channels of a single Centrex ISDN line can be assigned to this service. Once assigned, a B channel cannot be used for any other service unless changed at the Rates and Charges as set forth in D.17. following.

Packet Hunting¹ (T)

Allows the customer to define a group of numbers that belong to a hunt group. When an incoming call is destined for a busy terminal in the group, the call will be directed to an idle terminal in the same hunt group.

Secondary Directory Number

Allows a primary Centrex station equipped with compatible premises equipment the capability of an additional Centrex station line in addition to the Primary or Shared Directory Number.

Analog Shared Directory Number

Allows a non-ISDN Centrex primary station line whose primary appearance originates on non-ISDN equipment to appear on Centrex ISDN compatible premises equipment.

NOTE 1: B & D Channel Packet is a Frozen/Grandfathered Service with the exception of B channel packet that does not connect to the DPN switch, effective June 11, 2004. See General Regulations, Schedule Cal.P.U.C. Nos. A2.1.2,A.4 and D2.6,B. (N)

C. OPTIONAL FEATURES (Cont'd)

50. Centrex ISDN (Centrex Integrated Service Digital Network) (Cont'd)

g. Centrex ISDN provides the following central office features:

(1) Extended Centrex ISDN

Extended Centrex ISDN provides the customer with access in groups of eight lines from a central office selected by the customer other than the normal serving central office or an alternate central office as designated by the Utility.

Centrex ISDN may be furnished from a customer selected contiguous or noncontiguous exchange or district area other than the exchange or district area in which the customer's primary location is located at the Rates and Charges for Extended Centrex ISDN as set forth in D. following.

Where service is furnished from a contiguous or noncontiguous exchange selected by the customer, Centrex ISDN will be subject to the following:

- No foreign exchange business message or dollar allowance will be given to Extended Centrex ISDN when furnished from a contiguous or noncontiguous exchange.
- Message Usage and Allowances will apply as shown in Schedule Cal.P.U.C. No. A5.3.
- Only one free directory listing will be offered for the Listed Directory Number (LDN). It will appear in the telephone directory that covers the exchange from which the Extended Centrex ISDN is served. Additional Listings may be provided at the rates as shown in Schedule Cal.P.U.C. No. A5.7.1.

The rates and charges for Extended Centrex ISDN are in addition to all other rates and charges applicable to Centrex ISDN.

10.1 CENTREX (Cont'd) (T)(L)

C. OPTIONAL FEATURES (Cont'd)

50. Centrex ISDN (Centrex Integrated Service Digital Network) (Cont'd)

i. Centrex ISDN Usage Plan

Allows Centrex ISDN (USOC: BAPKG) customers only to subscribe to a plan that will provide an allowance for a flat monthly rate for Local Plus voice and data calls (IntraLATA message charges). The plan has seven (7) options which are as follows:

- Option 1, \$ 20.00 Allowance
- Option 2, \$ 50.00 Allowance
- Option 3, \$100.00 Allowance
- Option 4, \$150.00 Allowance
- Option 5, \$200.00 Allowance
- Option 6, \$250.00 Allowance
- Option 7, \$300.00 Allowance

Customers may subscribe to only one usage plan per month. The usage associated from both B channels would contribute to the total amount of allowance. Once the customer has reached the maximum allowance in the plan/plans subscribed, they will be billed the tariff rates for Local Plus calls as set forth in Schedule Cal.P.U.C. No. D11. Minimum billing (T) as set forth in Schedule Cal.P.U.C. No. A2. is applicable.

j. Centrex ISDN Term Discount Plans

Provides a discount on the monthly recurring rates for Centrex ISDN (USOC: BAPKG) customers only. Customers who subscribe to and maintain service for a term period of either 3 or 4 years will be eligible for a discount as set forth in D.17., following Should the customer disconnect the Centrex ISDN service (USOC: BAPKG) prior to the expiration of the term agreement, a termination charge of will apply. The termination liability will be the dollar amount that was discounted from the normal tariff rate multiplied by the amount of months the customer maintained the service. This termination liability will be debited to the customers regular monthly bill. (L)

C. OPTIONAL FEATURES (Cont'd)

51. Attendant Display of Queued Calls

Provides the attendant with a visual display of the number of calls queued and the time, in seconds, that the oldest call has been waiting. Attendant Display of Queued Calls is provided for incoming call facility types (e.g., tie lines, WATS, 800) of an attendant console or a subgroup of consoles on suitably equipped attendant consoles.

52. System Distinctive Ringing

System Distinctive Ringing provides distinctive ringing patterns to calls terminating on all stations in the Centrex system.

53. Modem Interface

A central office modem that connects a central office port to a private line channel for the purpose of transmitting data to a customer location.

54. CenPath

CenPath provides Centrex, central office switched data communications. It allows simultaneous user selective transmission speeds of 300 bps to 19.2 Kbps asynchronous, and from 1.2 to 64 Kbps synchronous.

C. OPTIONAL FEATURES (Cont'd)

55. Meet Me Conference Small

Establish a conference connection when up to a maximum of six (6) conferees dial a specific Directory Number (DN) at a predetermined date and time.

56. Meet Me Conference Large

Establish a conference connection when up to a maximum of thirty (30) conferees dial a specific Directory Number (DN) at a predetermined date and time.

57. Attendant Conference Large

Allows an attendant to establish a conference call with up to a maximum of thirty (30) conferees (not including the attendant).

58. Station Controlled Conference Large

Allows a station user to establish a conference call with up to a maximum of thirty (30) conferees without the assistance of an attendant.

59. Attendant Do Not Disturb

Permits an attendant to deny a single station user, select group of station users or all station diversion groups from receiving direct inward dialed and station to station calls.

60. Attendant Through Dialing

Through Dialing allows a station user to complete the dialing on other than station-to-station calls after the attendant selects the outgoing facility.

61. Attendant Call Transfer

Enables the attendant to flash and dial a code prior to dialing the third party of a 3-way call. This inhibits the automatic connection of all parties to allow private consultation between the attendant and the third party.

C. OPTIONAL FEATURES (Cont'd)

62. Night Service (Attendant)

Provides for the routing of incoming calls when the attendant is absent. The feature is activated by a key which directs incoming calls to preselected station lines within a subscriber group. A Metallic Channel as set forth in Schedule Cal.P.U.C. No. 175-T., Section 7.5.1 is required for each console arranged (see Regulation A.1.aa., preceding) or a Special Access Voice Grade Channel as set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3.

63. Attendant Conference Small

Allows an attendant to establish a conference call with up to a maximum of six (6) conferees, including the attendant. The conferees are added one at a time by the attendant.

64. Attendant Control of Facilities

Permits the attendant to restrict dial tone access from all stations to a tie line, foreign exchange line, and WATS line by operating a customer provided key or dialing a code. When control is activated, calls to these facilities are routed to either the attendant, or a specified Directory Number or reorder is made available. A Metallic Channel as set forth in Schedule Cal.P.U.C. No. 175-T., Section 7.5.1 is required for each facility group key activation (see Regulation A.1.aa., preceding) or a Special Access Voice Grade Channel as set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3.

65. Attendant Identification of Incoming Calls

Allows an attendant to visually identify the type of service or trunk group of an incoming call by indicator lamps on the attendant console.

66. Trunk Busy Indication (attendant)

Provides a visual indication on a private facility group basis when the facility group is entirely in use. A Metallic Channel as set forth in Schedule Cal.P.U.C. No. 175-T., Section 7.5.1 is required for each visual indication on each console (see Regulation A.1.aa., preceding) or a Special Access Voice Grade Channel as set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3.

67. Attendant Camp-On

Allows the attendant to extend an incoming call to a busy station. When the busy station becomes idle it is connected to the waiting call.

68. Individual Console Measurements

Individual Console Measurements provides operational measurements for individual attendant consoles. Both peg counts and usage counts are provided. A detailed record can be made for the total duration of answered calls, originated calls and position busy. In addition, data may be obtained for usage time a console is occupied, position busy peg count, Directory Number (DN) calls answered peg count, intercept calls answered, dial 0, calls transferred, timed recalls, call forwarded calls, miscellaneous calls, queued calls, originated calls, extended calls, held calls and authorization codes.

A Special Access Voice Grade (VG36) Channel as set forth in Schedule Cal.P.U.C. No. 175-T, Section 7.5.3,(A)(B) and a central office Modem Interface as set forth in C.53. preceding, is required to provide operational measurements to customer provided terminal equipment located at the customer's premises. A compatible customer provided modem, at the customer's premises is required. Processing of Individual Console Measurement detail information will be performed by the customer.

C. OPTIONAL FEATURES (Cont'd)

69. Call Center Manager (CCM)

Applicable to CCM installed prior to October 22, 1992 the effective date for Advice Letter No. 16291.

- a. Call Center Manager (CCM) is furnished at the rates and charges as shown in D.8 following, which are in addition to other charges and rates for Centrex service. CCM is a central office based communications system that distributes a large volume of incoming calls over a group of Centrex primary, semi-restricted or interior lines. The calls are distributed in an equitable manner to available agents. When all agents are busy, the calls are queued and a recorded announcement is played to the caller requesting that they wait for the next available agent. The CCM accepts calls and routes them based on call parameters established by the customer.

As an option, CCM provides detailed management information about the systems performance to a customer provided processor which can format management information reports.

Call Center Manager is available to a customer whose Centrex service is furnished by use of a central office equipped with the required call processing and feature capacity and where operating conditions permit.

- (1) 800 Service, Foreign Exchange Trunks and Tie Line/Special Access Voice Grade Channels may be terminated in the CCM for incoming calls. The incoming calls will be routed directly to the CCM pilot number via a Centrex Primary Line.
- (2) Lines furnished in a group may consist of Primary, Primary Semi-Restricted, Interior Lines or any combination of such lines provided in D.4 following.
- (3) Electronic Telephone Features are available at the rates, charges and regulations as set forth in A.1.f, C.44 preceding and D. following.

69. Call Center Manager (CCM) (Cont'd)

Applicable to CCM installed prior to October 22, 1992 the effective date for Advice Letter No. 16291.

b. Call Center Manager provides the following central office features:

(1) Basic System Features:

Agent Position

- Abandoned Call Clearing

Abandoned Call Clearing provides for the removal of a call when a caller disconnects while the call is in queue or after the call is presented to the agent.

- Call Priority

Call Priority permits the customer to assign priorities to various directory numbers for calls going into queue.

- Call Present

Call Present provides that an agent can be automatically presented with a call within 2.5 seconds of completing the last call. A short burst of tone alerts the agent before each new call is presented.

- Call Source Identification

Call Source Identification provides for the display of the calling number within the Centrex system to the called party on compatible premises equipment.

- Call Supervisor

Call Supervisor provides the agent quick access to the supervisor's position.

- Clerical

Clerical is used when an agent requires post-call work time to complete a transaction.

b. Call Center Manager provides the following central office features:
(Cont'd)

(1) Basic System Features: (Cont'd)

Agent Position (Cont'd)

- Emergency Alert

Emergency Alert permits an agent to indicate an emergency call with a single key action. The Emergency Alert feature conferences a supervisor to the call. The agent identification is displayed when the key is used on compatible premises equipment.

- Incoming Call Queue

Incoming Call Queue places incoming calls in queue when all agents are busy. Calls are handled on a first-in, first served basis and calls are presented to the agent who has been idle the longest. The customer establishes the queue and queue parameters that a call enters.

- Logon/Logoff

Logon/Logoff allows an agent to log in and out of a position. Logoff prevents an agent from receiving incoming CCM calls.

- Manual Answering

Manual Answering permits an agent to answer calls through the use of a single key when equipped with compatible premises equipment. The telephone set can be made to ring when a call is delivered.

69. Call Center Manager (CCM) (Cont'd)

Applicable to CCM installed prior to October 22, 1992 the effective date for Advice Letter No. 16291.

b. Call Center Manager provides the following central office features:
(Cont'd)

(1) Basic System Features: (Cont'd)

Agent Position (Cont'd)

- Overflow Enhancement

Overflow Enhancement permits alternate call routing when the queue for the agent group is full, to up to four other agent groups within the same Central Office. Overflow routes are established by the customer. This feature is limited to those central offices that are suitably equipped.

- Ringthreshold

Ringthreshold permits the rerouting of a call when an agent does not answer within a preprogrammed time. The call is rerouted either to the longest idle agent or to the front of the queue when no agents are available. This feature is limited to those offices that are suitably equipped.

(2) Supervisor Position

- Answer Agent

Answer Agent permits a supervisor to directly answer calls from the agents.

- Automatic Overflow

Automatic Overflow permits a supervisor to specify both a maximum number of calls that can be queued and a maximum holding time for incoming calls. A new incoming call will be rerouted according to the customer's instructions when one of the preceding conditions is exceeded.

69. Call Center Manager (CCM) (Cont'd)

Applicable to CCM installed prior to October 22, 1992 the effective date for Advice Letter No. 16291.

b. Call Center Manager provides the following central office features:
(Cont'd)

(2) Supervisor Position (Cont'd)

- Answer Emergency

Answer Emergency permits the supervisor to directly respond to an emergency call presented by an agent.

- Call Agent

Call Agent permits a supervisor to directly call an agent.

- Call Delay Announcement

Call Delay Announcement provides up to two announcements per system to be used when all agents are busy. A call delay announcement is a pre-recorded central office announcement produced by the Utility. Additional announcements, capacity of four per group, are available at the rates and charges in D. following.

- Display Queue Status

Display Queue Status allows a supervisor to monitor queue status (number of calls waiting, total agent positions occupied and longest waiting time) via their telephone instrument.

- Position Status Display

Position Status Display provides the supervisor with a status of agent activity such as logged off on an incoming call or in clerical mode, etc.

- Observe Agent

Observe Agent permits a supervisor to establish a listen or live path into a conversation between an agent in that supervisor's group and the caller.

C. OPTIONAL FEATURES (Cont'd)

69. Call Center Manager (CCM) (Cont'd)

Applicable to CCM installed prior to October 22, 1992 the effective date for Advice Letter No. 16291.

b. Call Center Manager provides the following central office features:
(Cont'd)

(2) Supervisor Position (Cont'd)

- Night Service

Night Service provides that all incoming calls receive customer specified night treatment when all positions are logged out via the Logon/Logoff feature. The supervisor may specify different types of night treatment such as announcement, overflow to another group or telephone number.

(3) Optional CCM Features

- Management Information System Features

Customer Parameters Reconfiguration permits the system administrator to reconfigure the parameters of the system via the management information system data link. The customer can control queues by changing queue slots, queue size, maximum wait times, configuration of agents within groups, overflow routes, ring thresholds and password levels of supervisor into the system.

Management Information System continuously monitors agent and group calling patterns providing the customer with real time and historical measurement of the agent and group performance to customer established thresholds. Measurement includes the number, the duration and time of incoming calls, outgoing calls, wrap up time doing reports and idle time when the agent was not presented a call.

Management Information System Link provides a data link to carry call processing data to a customer provided management information system. A Special Access Voice Grade (VG36) or ADN channel is required for each system arrangement at the rates and charges as defined in Schedule Cal.P.U.C. No. 175-T, Sections 7.5.3., (A)(B) or 7.5.8, (B).

- Direct Outward Dialing allows an agent or supervisor position to place an outgoing call via a Virtual Directory Number at the rates and charges set forth in D.5.1 following.

e. Call Center Manager provides the following central office features:
(Cont'd)

(1) CCM Group Packages: (Cont'd)

(a) Basic Group Package: (Cont'd)

- Manual Answering

Manual Answering permits an agent to answer calls through the use of a single key, when equipped with compatible premises equipment. The telephone set can be made to ring when a call is delivered.

- Night Service

Night Service (system activated) provides that all incoming calls receive customer specified night treatment such as, announcements, overflow of calls to another Call Center Manager group or to another telephone number when all agent positions are logged out via the Logon/Logoff feature.

- Overflow Scan

Overflow Scan permits alternate call routing when the queue for the agent group is full. Calls can be routed to look ahead for an available agent in up to four (4) other agent groups within the same central office. The customer is responsible for establishing overflow routes. Overflow Scan is only available in those central offices that are suitably equipped.

- Ring Threshold

Ring Threshold permits a customer to reroute a call when an agent does not answer within a preprogrammed time. The call is rerouted either to the longest idle agent or to the front of the queue when no agents are available.

(b) Call Delay/Forced Announcements

Call Delay/Forced Announcement(s) is a pre-recorded central office announcement produced by the Utility when all agents are busy or when the call center is in night service mode.

(1) CCM Group Packages: (Cont'd)

(c) Music In Queue

Music In Queue provides the option of broadcasting music after the call delay announcement. The customer is responsible for providing the music source.

(d) Queue Status Lamp

Queue Status Lamp provides up to three visual indicators to identify queue status. An external color display will signal both supervisor and agent when the thresholds have been exceeded. Separately mounted lamp indicators are provided by the customer.

(2) Agent Feature Packages

(a) Basic Agent Package

- Agent Priority Call Transfer

Agent Priority Call Transfer allows an agent to transfer an incoming Call Center Manager call to another agent's primary number. The transferred call is presented directly to the second agent if the agent is idle; otherwise, the transferred call is placed in the agent's queue until the agent completes their current call.

- Clerical

Clerical is used when an agent requires post-call work time to complete a transaction.

- Log-on/Log-off

Log-on/Log-off allows an agent to log-on and log-off of a position. Log-off prevents the agent from receiving incoming Call Center Manager calls.

- Called Number Display

Called Number Display provides for the display of the dialed number when the agent's workstation is equipped with compatible premises equipment.

- Call Source Identification

Call Source Identification provides for the display of the calling number within the Centrex system to the called party when the agents position is equipped with compatible premises equipment.

(3) Supervisor Feature Packages:

(a) Basic Supervisor Package:

- Call Agent

Call Agent permits a supervisor to directly call an agent when equipped with compatible premises equipment.

- Controlled Overflow

Controlled Overflow permits a supervisor to direct any new incoming calls to a customer defined overflow route via a single key action when equipped with compatible premises equipment. Activation of this feature overrides the Automatic Overflow feature for new incoming calls.

e. Call Center Manager provides the following central office features:
(Cont'd)

(3) Supervisor Feature Packages: (Cont'd)

(a) Basic Supervisor Package: (Cont'd)

- Observe Agent

Observe Agent permits a supervisor to establish a listen or live path into a conversation between an agent in the supervisor's group and a caller when equipped with compatible premises equipment.

- Night Service

Night Service (supervisor activated) permits a supervisor to direct all incoming calls to the night treatment route via the activation of a night service key on compatible premises equipment.

(b) Answer Call Alert Package:

- Answer Agent

Answer agent permits the supervisor to directly answer calls from the agents.

- Answer Emergency

Answer Emergency permits the supervisor to directly respond to an emergency call presented by an agent.

(c) Call/Agent Status Display Package:

- Display Queue Status

Display Queue Status allows a supervisor to monitor queue status (number of calls waiting, total number of agents positions occupied and the longest waiting time) when equipped with compatible premises equipment.

e. Call Center Manager provides the following central office features:
(Cont'd)

(3) Supervisor Feature Packages: (Cont'd)

(c) Call/Agent Status Display Package: (Cont'd)

- Position Status Display

Position Status Display provides the supervisor with a status of agent activity (logged off, on an incoming/outgoing call, in a clerical mode, idle, etc.) when equipped with compatible premises equipment.

- Position Status Summary Display

Position Status Summary Display allows the call center supervisor to quickly check the overall status of the agents in their group (e.g., how many agents are logged off, logged on, idle, on an incoming call or in clerical mode, etc.) when equipped with compatible premises equipment.

(4) Management Information System Packages:

(a) Basic Management Information System (MIS) Package:

- Management Information System Link

The Management Information System link provides a data stream to carry call processing data to a customer provided management information system and the call center reconfiguration commands from the customer's MIS to the central office switch. A Special Access Voice Grade (VG36) or ADN channel for each system arrangement is required.

D10. CENTREX

10.1 CENTREX (Cont'd)

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

70. Trunk Side Connection - Concentrated Access

Trunk Side Connection - Concentrated Access permits multiple stations of a customer provided switch access to Centrex capabilities and features. It will be provided through the interconnection of a Centrex line to the network interface of a customer provided switch.

71. Centrex Networking Service

Centrex Networking Service (CNS) provides Primary/Primary Semi-Restricted station lines of a Centrex system the capability of abbreviated dialing (not to exceed 7 digits) to any selected location outside a Centrex system. This includes Intra/InterLATA, InterSTATE and International calling.

The customer may select which Centrex stations are to be arranged for abbreviated dialing and may establish more than one abbreviated dialing plan. CNS calls will be transported over a network path(s) to the distant location(s) selected by the customer at the Rates and Charges as set forth in D. following. The number of network path(s) is determined by a busy hour call volume study conducted by the Utility.

In the ESS central offices originating station call detail is not available. A billing identification number will be assigned to each network path. All CNS ZUM and toll message charges will be billed to the billing identification number and included in the customer's regular monthly billing. DMS central offices will provide station line identification and billing of outward dialed toll and ZUM unit calls to CNS customers.

CNS may be used when a call is completed over a specific selected facility or network which may include, but is not limited to, Electronic Tandem Switching (ETS), Wide Area Telephone Service (WATS), Foreign Exchange Service (FXS), Flexible Route Selection (FRS), tie lines, Special Access Voice Grade Channels and Direct Distance Dialing (DDD).

(T)(L)

C. OPTIONAL FEATURES (Cont'd)

72. Priority Ringing

Priority Ringing differentiates incoming calls from up to ten (10) customer programmable preselected numbers by signaling the station user with a distinctive ringing pattern. If the primary station line subscribes to Call Waiting, a distinctive tone is heard for the selected set of numbers.

73. Select Call Forwarding

Select Call Forwarding permits a primary station line to automatically forward (transfer) calls from up to ten (10) customer programmable preselected numbers to an alternate customer programmable number within or outside the serving central office and to restore it to normal operation at their discretion. Select Call Forwarding can be used in conjunction with Call Forwarding Variable, Busy and Don't Answer. The Select Call Forwarding customer is responsible for the payment of applicable local, ZUM or toll message charges for each completed call between their call forwarding equipped line and the number to which the call is forwarded. This charge applies to all forwarded calls that are answered at the number to which the calls are forwarded.

74. Repeat Dialing

Repeat Dialing permits a primary station line to have calls automatically redialed when the first attempt reaches a busy number on up to 10 different busy telephone numbers. The line is checked every 45 seconds for up to 30 minutes and alerts the customer with a distinctive ringing pattern when the busy number and the station line is free. In addition, the customer can continue to make and receive calls while the feature is activated. The Repeat Dialing customer is responsible for payment of applicable local, ZUM or toll message charges for each completed call.

C. OPTIONAL FEATURES (Cont'd)

75. Select Call Acceptance

Select Call Acceptance enables a primary station line to accept only calls from up to thirty-one (31) customer programmable preselected numbers and to return to normal operation at their discretion. Callers telephone numbers that are not on the acceptance list will receive a recorded announcement that their call is not being accepted and will not be charged the normal local, ZUM or toll message charges or will have their call forwarded to another telephone number designated by the customer within or outside the customers serving central office.

or

Select Call Acceptance enables the customer to terminate calls from up to thirty-one (31) customer programmable preselected telephone numbers to a Centrex Multi-Line Hunt Group. Each line in the hunt group must be equipped with Select Call Acceptance, however, the pilot number will maintain the list. The number of hunt terminals depends upon the customer requirements for users not to receive a busy indication. The customer can accept only calls from the preselected numbers and can return to normal operation at their discretion. Callers telephone numbers that are not on the acceptance list will receive a recorded announcement that their call is not being accepted and will not be charged the normal local, ZUM or toll message charges or will have their call forwarded to another telephone number as designated by the customer within or outside the customers serving central office.

The Select Acceptance customer is responsible for the payment of applicable local, ZUM or toll message charges for each completed call between their call forwarding equipped line and the number to which the call is forwarded. This charge applies to all forwarded calls that are answered at the number to which the calls are forwarded.

With Select Call Acceptance a call may be forwarded up to a maximum of five (5) times, only within the same serving central office.

76. Caller Identification (Caller ID)

Caller ID displays the telephone number of the calling party on a specially designed telephone or a device that the customer attaches to their existing telephone.

C. OPTIONAL FEATURES (Cont'd)

77. Music on Hold

Provides a continuous broadcast of music or recorded announcement to callers who are waiting for connection to a called party. Music on hold is automatically activated whenever the calling party is placed on Central Office hold.

78. Remote Access To Call Forwarding

Allows a user to activate, deactivate and change their forwarded to number from a location other than where the service is located. Activation and deactivation is via a dialable number and access code.

79. Call Return

Allows the user to return a call to the last incoming call whether answered or not. Upon activation, redials the number automatically and continues to check the number every 45 seconds for up to 30 minutes if the number is busy. The user is alerted with a distinctive ringing pattern when the busy number is free. When the user answers the ring, an attempt to complete the call is made. The calling party's number will not be delivered or announced to the caller under any circumstances.

80. Call Screen

Allows the user to automatically block calls from up to ten customer designated telephone numbers. The list of numbers can be changed at any time. Callers whose numbers have been blocked will hear a recorded message and no usage will apply. When Call Screen is active, calls from numbers on the customer controlled list will be routed to a special announcement. The calling party's number will not be delivered or announced to the call recipient under any circumstances.

81. Call Trace

Allows the user to dial a code to automatically request that the Utility record a caller's originating telephone number, the date and time of the call as well as the date and time the user initiated the trace. The information is stored by the Utility and disclosed only to a law enforcement agency for investigation purposes. The customer does not receive any information regarding the origination of the call.

83. Area Wide Centrex

(N)

- a. Area Wide Centrex provides multi-location Centrex customers with a private network capabilities using the switched network.
- b. Area Wide Centrex will provide the Centrex customer an abbreviated dialing plan for inter-Centrex, inter-exchange, intra-LATA voice calls for a flat monthly rate per Centrex station, as set forth in Section D, following.
- c. The abbreviated dialing plan can include both on-net and off-net telephone numbers, however MTS usage rates will apply to any call that originates from or terminates on a non-Centrex station as set forth in Schedule Cal.P.U.C. No. D11. MTS usage rates will also apply to any call that originates from or terminates on a Centrex station that is not subscribing to Area Wide Centrex as set forth in Schedule Cal.P.U.C. No. D11.
- d. An AWC Modification Nonrecurring Charge will apply each time an AWC customer adds or changes their dialing plan as set forth in Section D, following.
- e. Regulations set forth in this schedule are in addition to rules and regulations set forth in Schedule Cal.P.U.C. No. A2. for Network and Exchange services. Area Wide Centrex is offered as follows:
 - (1) AWC service is available on Centrex service only.
 - (2) MTS Usage rates do not apply to intra-system/intra-LATA voice calls that originate from and terminate on Centrex stations that subscribe to AWC.
 - (3) AWC is available where local facilities and operating conditions permit.
 - (4) The customer must subscribe to a Pacific Bell Business Optional Calling Plan.
 - (5) AWC is only available on BTNs billed to the customer of record.
 - (6) AWC must include at least two BTNs in order to form a network.

e. Regulations set forth in this schedule are in addition to rules and regulations set forth in Schedule Cal.P.U.C. No. A2. for Network and Exchange services. Area Wide Centrex is offered as follows: (Cont'd)

- (7) A customer must have at least two separate Centrex systems within a LATA.
- (8) For every Centrex system that has multiple sites, at least one of those sites must have AWC on all lines.
- (9) When expanding AWC, to an additional site, all lines at that site must have AWC.
- (10) 900 or 976 Telephone numbers are not included in AWC.
- (11) AWC applies to voice bearer channel calls. MTS usage rates apply to all data bearer channel calls as set forth in Schedule Cal.P.U.C. No. D11. and are in addition to AWC service Charges.
- (12) All AWC service customers must subscribe to AWC and the standard dialing plan (cannot be a part of an "Assume 9" Centrex).
- (13) AWC customers are responsible for notifying the Utility of any adds, moves or changes to their AWC service. (T)
- (14) The AWC dialing plan can include non-Centrex telephone numbers as terminating numbers, however, calls to these numbers will be billed at MTS usage rates as set forth in Schedule Cal.P.U.C. No. D11. (T)
- (15) MTS usage rates apply to all completed calls that are not intra-system/intra-LATA calls that do not originate and terminate on Centrex stations. MTS usage rates are found in Schedule Cal.P.U.C. No. D11. and are in addition to AWC service charges.

86. Centrex Internet Protocol (IP) Service

(N)

a. Description

Centrex Internet Protocol (IP) Service offers Internet Protocol (IP) capability that consists of Centrex stations (Centrex IP stations) that work off a customer's LAN/WAN (Local Area Network/Wide Area Network) and receive station feature functionality and access from the Utility. Centrex IP lines convert voice to packets via customer provided IP phones or special software loaded on a customer's PC and delivers calls to the Utility's central office switch via separately purchased digital transport facilities.

The digital transport special access facility that is required for Centrex IP includes DS1 (1.544 Mbps), DS3 (44.736 Mbps) or OC3 (155.520 Mbps) and is provided under appropriate Schedule Cal. P.U.C. No. 175-T, Section 7, Special Access. The digital transport facility rates and charges are in addition to the rates and charges for Centrex IP.

Centrex IP stations lines are furnished at rates and charges as shown in D.23., following and are in addition to the Centrex Basic Access charge as set forth in D.4, following

Centrex IP station lines can work in connection with other types of Centrex lines and Centrex optional features available from the Utility. Features for Centrex IP are divided into two packages, Centrex IP Standard Line Feature Package and Centrex IP Deluxe Line Feature Package. A list of these feature packages are shown in c., following.

b. Regulations

Centrex IP Service will be available only in those central offices that are suitably equipped.

Rules and Regulations set forth in this Schedule are in addition to Rules and Regulations set forth in Cal. P.U.C. No. 175-T, Sections 2, 5 and 7 for Special Access Digital Transport.

Centrex IP station lines can be counted as part of the 2 primary line minimum and is counted toward the system establishment charge.

The initial order received from the customer for Centrex IP must be for a minimum of 15 Centrex IP stations. Subsequent orders for IP stations do not have a minimum requirement.

C. OPTIONAL FEATURES (Cont'd)

- 86. Centrex Internet Protocol (IP) Service (Cont'd)
- b. Regulations (Cont'd)

(N)

The customer is responsible for providing compatible premise equipment in order to utilize Centrex IP Service. All customer provided equipment used to interface with Centrex IP is required to conform with the Technical Specifications as used by the Utility and found in SBC's Customer Interface Document, "Ameritech, Pacific Bell and Nevada Bell Centrex IP, Southwestern Bell Plexar®-II IP, Southern New England Telephone CentraLink IP," which may be found at <http://sbc.com/centrexip>. The customer or authorized user is responsible for testing their equipment to ensure that such equipment is operating properly.

Centrex IP Service requires the customer's LAN/WAN to meet standards as specified in SBC's Customer Interface Document, "Ameritech, Pacific Bell and Nevada Bell Centrex IP, Southwestern Bell Plexar®-II IP, Southern New England Telephone CentraLink IP," which may be found at <http://sbc.com/centrexip>. Changes in the customer's LAN or WAN configuration could affect the performance level of the Centrex IP service, up to and including loss of dial tone. In order to facilitate troubleshooting of service problems, customers should notify their Pacific Bell Telephone Company account team representative in writing if any changes are made to the LAN or WAN configuration. The Utility cannot be liable for delay in correcting any service problems if the customer has not provided notice of changes to their LAN or WAN configuration. Provisions concerning other limitations of liability are set forth in Schedule Cal. P.U.C. No. A2.1.14.

Centrex IP Service is offered on a monthly, 24, 36, or 60 months term pricing plan as set forth in Section D.23., following. Customers are required to participate in a 24, 36, or 60 months term plan upon their initial term agreement. When their initial term agreement expires, customers can then participate in the monthly plan or another term plan. The monthly rate for the term of 24, 36 or 60 months will not be subject to rate increases for the duration of the term pricing plan.

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

C. OPTIONAL FEATURES (Cont'd)

86. Centrex Internet Protocol (IP) Service (Cont'd)

b. Regulations (Cont'd)

(N)

If the customer disconnects their Centrex IP Service prior to the expiration of their term commitment, the Utility will bill the customer for and the customer will be required to pay the lessor of:

The sum of all discounts rendered under the terms of this agreement, plus 10% annual interest¹, prorated monthly. Discounts are defined to include reductions to monthly tariff rates, full or partial waivers of non-recurring charges, and any other credits or discounts that have been rendered under the terms of this agreement, or,

The total monthly charges or minimum annual commitments remaining on the service term discounted by 10%.

For the duration of the term agreement, the customer must maintain a minimum of either 65% of the Centrex IP lines initially purchased or 15 Centrex IP lines, whichever is greater. If the customer falls below these minimum requirements, the customer will be assessed the Early Termination Fees as stated above. These Early Termination Fees are in lieu of the Early Termination Fees described in 10.1.A.1.am, 2.a, 2.B and 2.C preceding.

Nonrecurring charges for Centrex IP Service will utilize the rates set forth in D, following.

Adds, moves and changes completed after the established due date will be charged at the prevailing tariff rates. Terms and conditions of this offering will continue to apply with adds, moves and changes.

911 calls received from a Centrex IP station will be forwarded to the PSAP serving the telephone number location of the Centrex IP station. ANI and ALI information received from such Centrex IP station may not be the actual physical address for the Centrex IP station. When a Centrex IP station moves from its primary address, it is the customer's responsibility to contact the Utility to correct the records to reflect the new address in the 911 database. In order to ensure the proper location is sent to the PSAP, a non-Centrex IP telephone needs to be used to dial 911.

NOTE 1: The annual interest rate shall be calculated at the maximum rate permissible by law, not to exceed Pacific Bell Telephone Company's approved Cost of Capital.

87. Custom Calling Name on Centrex (CCNAM)

(N)

a. Description

Custom Calling Name on Centrex (CCNAM) is an AIN terminating Caller ID feature, that provides the internal employee name and telephone number delivered on intra-company Centrex-to-Centrex calls, and the caller name and number on incoming calls that originate outside of the company, where facilities and operating conditions permit.

CCNAM will provide internal called party information across multiple Centrex groups, when used in conjunction with Area Wide Centrex.

b. Terms and Conditions/Restrictions

- (1) Requires compatible customer premises equipment for display of caller name and number.
- (2) Customers must establish and maintain an internal name/number directory (Customer Data Directory) through a Graphical User Interface (GUI). The Utility will provide the customer with a logon and password that will be used to access the web-based GUI to load and make changes to their database. The customer maintains the Customer Data Directory and is responsible for the initial data load as well as subsequent database maintenance (additions, deletions, record changes). . The Utility is not responsible for the accuracy of the customer directory, nor any name list that the customer uses for the Custom Calling Name service.
- (3) The customer shall be responsible for protecting the security of their assigned user IDs. The Utility shall not be liable to the customer or any third party (including but not limited to any employee of the customer) for improper or incorrect designations when such designations are established with the customer's user ID.
- (4) Not available with Centex ISDN nor Centrex IP Deluxe.
- (5) Blocking Options for Caller ID (Selective Blocking (*67) and Complete Blocking (*82)), as described in P.U.C. No. A5.5.4.11.C.19, are not available to customers who have Custom Calling Name (CCNAM) on Centrex when dialing internal calls. Blocking Options for Caller ID are available to customers who have CCNAM on Centrex when dialing external calls.
- (6) The originating information is not part of the CCNAM offer. Depending on the capability of the telephone set or type of Central Office will dictate what is displayed for the outgoing call. This does not change as a result of subscribing to CCNAM.

C. OPTIONAL FEATURES (Cont'd)

88. Centrex Simultaneous Ring One Number (CSR ON)

(N)

a. Description

Centrex Simultaneous Ring One Number (CSR ON) is an optional Centrex station feature that will extend the reach of a subscriber's Centrex station number, by causing one additional telephone number to ring simultaneously whenever the Centrex station number is dialed. The caller is not aware that the telephone number they have dialed is a member of a CSR ON group or that the call was answered from another telephone number. The caller only receives a busy signal if both phones in the CSR ON group are simultaneously busy. Simultaneous ringing only occurs when a call is dialed directly to the enabled CSR ON subscribing Centrex station.

The simultaneously rung number can be any non zero-plus number (i.e. operator assisted or international calls) valid telephone number, including other Centrex stations, residential telephone lines, or cellular phones, for example.

In the event that a CSR ON subscriber does not answer a call on either of the simultaneously rung numbers, and in the event that one or both of the simultaneously rung numbers has an associated answering device or voice mail, the first entity to answer the call will receive the message.

When a CSR ON subscriber's Centrex station is answered by the simultaneously rung telephone number, the subscriber's Centrex station will be billed any applicable tolls, as with Call Forwarding service, just as if a call was placed from the Centrex station to the telephone number where the call was answered.

This usage will be billed by the subscriber's existing carrier for the type of call in question, and will be billed according to whatever billing arrangement the subscriber has with that carrier. The number of digits the CSR ON subscriber can input for the simultaneously rung number is from 4-30 digits. (This is consistent with normal dialing in the switch.)

10.1 CENTREX (Cont'd)

C. OPTIONAL FEATURES (Cont'd)

89. Centrex Simultaneous Ring (CSR)

(N)

a. Description

Centrex Simultaneous Ring (CSR) is an optional Centrex station feature that will extend the reach of a subscriber's Centrex station number, by causing up to four additional telephone numbers to ring simultaneously whenever the Centrex station number is dialed. The caller is not aware that the telephone number they have dialed is a member of a CSR group or that the call was answered from another telephone number. The caller receives a busy signal if all the phones in the CSR group are simultaneously busy. Simultaneous ringing occurs when a call is dialed directly to the enabled CSR subscribing Centrex station. The simultaneously rung numbers can be any non zero-plus (i.e. operator assisted or international calls) valid telephone number, including other Centrex stations, residential telephone lines, or cellular phones, for example. The number of digits the CSR subscriber can input for the simultaneously rung numbers is from 4-30 digits. (This is consistent with normal dialing in the switch.)

In the event that a CSR subscriber does not answer a call on any of the simultaneously rung numbers, and in the event that one or more of the simultaneously rung numbers has an associated answering device or voice mail, the first answering device or voice mailbox that answers the call will receive the message.

When a CSR subscriber's Centrex station is answered at another telephone number within the subscriber's CSR list, the subscriber's Centrex station will be billed any applicable tolls, as with Call Forwarding service, just as if a call was placed from the Centrex station to the telephone number where the call was answered. This usage will be billed by the Utility's existing carrier for the type of call in question, and will be billed according to whatever billing arrangement the subscriber has with the Utility.

The CSR subscriber will be able to dial into an Interactive Voice Response Unit to activate/deactivate the feature and change the telephone numbers in the simultaneous ring list. When the feature is inactive, only the Centrex station will ring when the Centrex station number is dialed.

When the feature is in the active state, all telephone numbers on the simultaneous ring list will ring whenever the Centrex station number is dialed. When the feature is in the inactive state, only the Centrex station will ring whenever the Centrex station number is dialed.

D10. CENTREX

10.1 CENTREX (Cont'd)

C. OPTIONAL FEATURES (Cont'd)

90. Centrex Dial Plan for Advanced Solutions (DPAS)

(N)

a. Description

Dial Plan for Advanced Solutions (DPAS) is a single or multi-location dialing plan that converts an abbreviated number to a ten-digit telephone number used for direct calls. DPAS allows a Centrex subscriber to use abbreviated dialing, i.e., 2-9 digits, to call different telephone station types on an In-Network or Out-of-Network basis within the LATA.

In-Network calls are those calls placed by a Centrex station between other Centrex systems and must be subscribed to by the same customer of record or legal subsidiary. DPAS users can dial In-Network numbers on an abbreviated basis.

Out-of-Network calls are those calls placed by a Centrex station to a non-Centrex station subscriber. DPAS users can dial Out-of-Network numbers on an abbreviated basis. DPAS service does not provide a means for an Out-of-Network dialer to dial back on an abbreviated basis.

As specified in Schedule Cal.P.U.C. No. A2.1.1 the Local Access and Transport Area (LATA) denotes a geographic area established by the Utility for the administration of communications service. It encompasses designated exchanges, which are grouped to serve common social, economic and other purposes. The Utility will offer services to customers within a LATA only.

DPAS allows abbreviated dialing for the same customer within the same LATA Centrex system to another Centrex system or abbreviated calling from a Centrex system to a non-Centrex list of telephone numbers. NPA/NXX numbers must be located in the same Rate Center as the customer's Centrex system. As specified in Schedule Cal.P.U.C. No. A2.1.1 the term "Rate Center" for Exchange Service purposes denotes the designated points, representing exchanges or district areas (or locations outside exchange areas), between which mileage measurements are made for the application of inter-exchange and inter-district mileage rates, as specified in Schedule Cal.P.U.C. No. A6.2.

In addition to the Centrex system establishment charge and non-recurring and monthly recurring charges as set forth in 10.1., Centrex customers that establish DPAS may choose either an Extension or Location Dialing Plan, a calling plan with usage or flat-rate billing options and make DPAS system feature changes.

CATEGORY III SERVICES
D10. CENTREX

10.1 CENTREX (Cont'd)

C. OPTIONAL FEATURES (Cont'd)

90. Centrex Dial Plan for Advanced Solutions (DPAS) (Cont'd)

(N)

b. Terms, Conditions and Limitations

- (1) DPAS is available only to Centrex customers who currently subscribe to Centrex service or any new Centrex subscriber.
- (2) All stations in a Centrex system dialing plan must be provisioned with the DPAS feature.
- (3) Dialing plan options noted in (6) following do not need to be provisioned with the DPAS feature.
- (4) All in-network and out-of-network numbers must be the same Customer of Record or legal subsidiary of the Customer of Record.
- (5) The following DPAS dialing conditions apply:
 - (a) Inter-Centrex calls must remain intra-LATA and will be handled as usage-based or flat-rated at the customer's choice.
 - (b) Centrex-to-non-Centrex calls can either be usage-based or flat-rated at the customer's discretion and must be part of the same LATA as the original Centrex system.
 - (c) Centrex-to-Centrex calls will be two-way capable; Centrex-to-off-network calls will be one way only (i.e., leaving the Centrex system).
 - (d) For Deluxe Dial Plan option, the Utility must be the intra-LATA carrier (LPIC) for local toll calls when a DPAS call is placed. All other directly dialed, local toll calls will default to the customer's pre-existing LPIC carrier. Zone Usage Measurement (ZUM) and non-ZUM exchanges are defined in Schedule Cal.P.U.C. No. A5.2.1,B.
- (6) DPAS subscribers must choose between two dialing plan options:
 - (a) Extension Dialing uses the extension number (sequential digits from a seven-digit telephone number) to route the call. This extension number is used to identify an in-network or out-of-network number. Each extension number in the Extension Dialing Option plan must be a unique number without duplication.
 - (b) Location Code Dialing uses a leading identification digit in addition to the extension number to identify an in-network or out-of-network number. This Location Code Dialing permits extension number duplication.

10.1 CENTREX (Cont'd)

C. OPTIONAL FEATURES (Cont'd)

90. Centrex Dial Plan for Advanced Solutions (DPAS) (Cont'd)

b. Terms, Conditions and Limitations (Cont'd)

(7) DPAS subscribers can choose between Basic or Deluxe billing options. Both billing options are in addition to other applicable Centrex non-recurring and monthly recurring charges as set forth in D. following.

(a) Basic Dial Plan Billing - Usage charges apply for both in-network (inter-Centrex) and out-of-network completed calls.

(b) Deluxe Dial Plan Billing - Flat-rate charges apply for both in-network and out-of-network calls completed to telephone numbers in the same Rate Center as the originating Centrex telephone number as set forth in D. following.

(8) Calls to an out-of network telephone number in a Rate Center that is different from that of the originating Centrex telephone number are subject to usage charges.

(9) Calls between Centrex stations at different sites within the same LATA would either be billed on a usage basis or a flat-rate basis, depending on the dial calling plan selected by the customer.

(10) DPAS feature modifications are subject to a change charge as noted in D. following.

(11) DPAS subscribers will not incur a change charge for changing an in-network number to an out-of-network number.

(N)

c. Regulations and Limitations

- (1) DPAS is only available where Centrex Central Office equipment, features, facilities, and operating conditions permit. Other restrictions and limitations may apply.
- (2) DPAS may conflict with the following Centrex features: Automatic Callback, Automatic Recall, Repeat Dialing, Account Codes, Attendant Consoles, and ISDN Data Calls. Additional restrictions and limitations may be set forth by the Utility.
- (3) DPAS service does not allow an Out-of-Network dialer to dial back on an abbreviated basis.
- (4) Customers that subscribe to DPAS will not incur charges associated with removing incompatible Centrex features.
- (5) The total count of out-of-network numbers cannot exceed the sum of the number of Centrex stations that were in use when the DPAS feature was established, plus any additions to that number of Centrex stations added to the system(s) at a later date.

(1) Option I - Line Discounts DAFAA

Centrex features in the same Centrex system may receive a percentage discount for any combination of features offered under Feature Package A, Option I. Discounts will be based on the average features per line in service on the customer's bill round date. Rates and Charges defined in b., preceding, apply.

Average Features Per Line	Percentage Discount
1 - 2.99	0%
3 - 3.99	10%
4 - 4.99	20%
5 - 5.99	30%
6 - plus	40%

(2) Option 11 - Volume Discounts² DFTAA

In lieu of Option I, Centrex features in the same Centrex system may receive a volume discount for any combination of features offered under Feature Package A. Volume discounts (percentage discounts) will be applied to the total monthly rate for the total number of features in service on the customer's bill round date. Rates and Charges as defined in b., preceding, apply.

Total Number of Features	Percentage Discount
500 - 999	20%
1000 - plus	40%

NOTE 1: Rates and Charges for either one or two single features are applicable as shown in Feature Package A, item b., preceding.

NOTE 2: Feature Package A is Grandfathered upon approval of Advice Letter No. 18213B. Individual features listed under Feature Package A are available on an individual area basis after grandfathering. See Schedule Cal.P.U.C. A2.1.2,A.4.

- (1) Option I - Line Discounts USOC
DAFBB

Centrex features in the same Centrex system may receive a percentage discount for any combination of features offered under Feature Package B - Option I. Discounts will be based on the average features per line in service on the customer's bill round date. Rates and Charges defined in d., preceding, apply.

<u>Average Features Per Line</u>	<u>Percentage Discount</u>
1 - 1.99	0%
2 - 2.99	10%
3 - 3.99	20%
4 - 4.99	30%
5 - plus	40%

- (2) Option II - Volume Discounts USOC
DFTBB

In lieu of Option I, Centrex features in the same Centrex system may receive a volume discount for any combination of features offered under Feature Package B. Volume discounts (percentage discounts) will be applied to the total monthly rate for the total number of features in service on the customer's bill round date. Rates and Charges as defined in d., preceding, apply.

<u>Total Number of Features</u>	<u>Percentage Discount</u>
500 - 999	20%
1000 - plus	40%

NOTE 1: Rates and Charges for a single feature are applicable as shown in Feature Package B, item d., preceding. (L)

(1) Option I - Line Discounts

DAFAA

Centrex features in the same Centrex system may receive a percentage discount for any combination of features offered under Feature Package A, Option I. Discounts will be based on the average features per line in service on the customer's bill round date. Rates and Charges defined in b., preceding, apply.

Average Features Per Line	Percentage Discount
1 - 2.99	0%
3 - 3.99	10%
4 - 4.99	20%
5 - 5.99	30%
6 - plus	40%

(2) Option 11 - Volume Discounts²

DFTAA

In lieu of Option I, Centrex features in the same Centrex system may receive a volume discount for any combination of features offered under Feature Package A. Volume discounts (percentage discounts) will be applied to the total monthly rate for the total number of features in service on the customer's bill round date. Rates and Charges as defined in b., preceding, apply.

Total Number of Features	Percentage Discount
500 - 999	20%
1000 - plus	40%

NOTE 1: Rates and Charges for either one or two single features are applicable as shown in Feature Package A, item b., preceding.

NOTE 2: Feature Package A is Grandfathered upon approval of Advice Letter No. 18213B. Individual features listed under Feature Package A are available on an individual area basis after grandfathering. See Schedule Cal.P.U.C. A2.1.2,A.4.

CATEGORY III SERVICES

D10. CENTREX

(T)(L)

10.2 CENTREX PAYMENT PLANS

(T)

A. FIXED RATE PLAN¹

(T)

1. The Fixed Rate Plan permits customers with Centrex Service, Airport Intercommunicating Service, and Central Office Electronic Tandem Switching Service (hereinafter collectively referred to as Centrex) to pay fixed recurring monthly rates for a period of 12 month increments of not less than 12 months nor more than 120 months, as selected by the customer.
2. The Fixed Rate Plan is a contractual agreement between the Utility and its Customer; therefore, the Plan shall not be subject to the billing surcharge adjustment for the selected payment period. However, rate reductions which occur during the Fixed Rate Plan period of agreement will be passed on to the customer.
3. For each Centrex system to be covered by the Fixed Rate Plan, the Customer must sign a Payment Plan Agreement, Form No. UE0013, contained in Schedule Cal.P.U.C. No. A2.3. Customers with multiple centrexes must have a separate Plan for each Centrex system under the Fixed Rate Plan.

For purposes of this tariff, a Centrex system is defined as all Centrex station lines and associated features which share intercom capability and are provided to a single customer from a single central office switch².

4. The Fixed Rate Plan monthly rates for Centrex are listed in C. following, of this schedule. The rate elements listed are the only rate elements eligible for the Fixed Rate Plan. The Customer must pay the prevailing monthly rates and charges for all other rate elements and services as defined in their respective tariff schedules.

NOTE 1: To be implemented September 1, 1987.

NOTE 2: As defined in Schedule Cal.P.U.C. No. A2., Rule No. 1, Central Office. (L)
(L) Formerly in Schedule Cal.P.U.C. No. A9.

Continued

CATEGORY III SERVICES

D10. CENTREX

(T) (L)

10.2 CENTREX PAYMENT PLANS (Cont'd)

(T)

A. FIXED RATE PLAN¹ (Cont'd)

(T)

5. All Centrex Primary, Semi-restricted and Interior lines (hereinafter collectively referred to as Centrex lines) in the same Centrex system must be covered by the Fixed Rate Plan. As an option, the customer may subscribe to the Fixed Rate Plan for a portion of the centrex system and the Advance Payment Plan defined in B. following for the remainder of the system. Under this option all Centrex lines must be covered by either the Fixed Rate Plan or the Advance Payment Plan. All Payment Plan Agreements for the same Centrex system must have the same expiration date.
6. If available and subject to central office capacity, as determined by the Utility, additional Centrex lines and features may be added at the Fixed Rate Plan rates originally selected by the customer.
7. Customer may relocate a Centrex system without penalty, provided central office facilities and operating conditions permit. All terms and conditions of the Fixed Rate Plan remain in effect for the remainder of the payment period. If the customer moves to a location where Centrex service is unavailable, the customer shall pay the termination charges as set forth in 9., following.
8. Customers of the Fixed Rate Plan must pay the nonrecurring charges in Schedule Cal.P.U.C. Nos. A3.1, A9.1.1, A9.1.6, and A9.1.8 for the service, original additions and/or moves and changes for those items covered by this Plan.

NOTE 1: To be implemented September 1, 1987.

(L) Formerly in Schedule Cal.P.U.C. No. A9.

(L)

Continued

CATEGORY III SERVICES

D10. CENTREX

(T)(L)

10.2 CENTREX PAYMENT PLANS (Cont'd)

(T)

A. FIXED RATE PLAN¹ (Cont'd)

(T)

9. The customer agrees to pay for a minimum of seventy-five percent (75%) of the Centrex lines installed at the beginning of the Fixed Rate Plan. If the customer's number of Centrex lines (not including lines under Advance Payment Plan) falls below the minimum 75% commitment level, the customer will be required to pay either:

a. The Fixed Rate Plan Centrex monthly line rate at the 75% commitment for level the duration of the Fixed Rate Plan, or

b. The termination charge determined by the following formula:

# of Centrex Lines consti- tuting 75% <u>X</u> Commitment	Centrex Fixed Rate Plan Monthly <u>X</u> Line Rate	# of Months (in full month increments) Remaining in the Fixed Rate Plan	<u>X</u> 50%
--	---	--	--------------

c. The 75% commitment level applies to Centrex lines only. There will be no minimum commitment level for Centrex features or other service offerings except Centrex lines. Therefore, moves and changes, additions and/or deletions of Centrex features are permitted without incurring termination charges.

d. Termination charges will be universally applied; however, customers who upgrade their Centrex service to another Utility service will receive a credit against the cost of the new service that they are going to utilize. The credit amount will be determined in accordance with the formula defined in b. preceding, and such credit will be applied to the customer's bill.

For purposes of this tariff, an upgrade is defined as enhancements which are offered as a substitution for existing systems, and which result in an increase in capacity or capability that would serve the same communications needs that were served by the Centrex system.

NOTE 1: To be implemented September 1, 1987.

10.2 CENTREX PAYMENT PLANS (Cont'd)

(T)

A. FIXED RATE PLAN¹ (Cont'd)

(T)

10. Changes in the length of Fixed Rate Plan payment periods prior to the expiration of the customer's initial agreement may be provided without incurring termination charges subject to the following:

- a. The customer's initial Plan agreement must be terminated and a new Plan agreement entered into.
- b. The new payment period must be greater than the remainder of the Plan period initially selected.
- c. The customer must pay the prevailing Fixed Rate Plan monthly rates and charges in effect at the time the new Plan agreement is signed.
- d. Customers with Advance Payment Plan are not eligible for this option.

11. Except as otherwise stated, service shall be subject to those billing provisions as shown in Schedule Cal.P.U.C. No. A2.1.9 and 11.

12. Upon written concurrence by, and at the sole discretion of the Utility, the customer may assign its obligation under the Payment Plan Agreement to another customer. The new customer must pay the service charges in Schedule Cal.P.U.C. No. A3.1. The new customer assumes the responsibility to pay the rate for the remainder of the payment period beginning the day after the effective date of assignment as required in Schedule Cal.P.U.C. No. A2.1.23. The new customer will be bound by the terms and conditions of the Fixed Rate Plan.

13. The offering of Centrex Payment Plans as shown in A., B. and C. is provisional and the offering will terminate on August 10, 1990 unless cancelled, changed or extended.

The Utility may offer the Fixed Rate Plan until August 10, 1990, unless the Plan is sooner cancelled, or this date is otherwise shortened or extended. The above termination date affects only the Utility's ability to offer the Plan, and shall not act to terminate any Subscriber's individual plan, nor to otherwise affect the terms and conditions of any such individual plan. The terms and conditions of each Subscriber's plan, including but not limited to the length of such plan's term, shall continue to be as set forth in the applicable Agreement between Utility and Subscriber.

CATEGORY III SERVICES

D10. CENTREX

(T) (L)

10.2 CENTREX PAYMENT PLANS (Cont'd)

(T)

B. ADVANCE PAYMENT PLAN¹

(T)

1. The Advance Payment Plan allows customers with Centrex Service, Airport Intercommunicating Service, and Central Office Electronic Tandem Switching Service (hereinafter collectively referred to as Centrex) to partially or fully prepay for Centrex service for a period of 12 month increments of not less than 12 months nor more than 120 months, as selected by the Customer. The advance payment of services in no way constitutes a purchase and the Utility retains full ownership of and title to all items covered by the Advance Payment Plan.
2. The Advance Payment Plan is a contractual agreement between the Utility and its Customer; therefore, the Advance Payment Plan shall not be subject to the billing surcharge adjustment for the selected payment period.
3. For each Centrex system to be covered by the Advance Payment Plan the customer must sign a Payment Plan Agreement, Form No. UE0013, contained in Schedule Cal.P.U.C. No. A2.3.

For purposes of this tariff, a Centrex system is defined as all Centrex station lines and associated features which share intercom capability and are provided to a single customer from a single central office switch.²

4. The Centrex rate elements listed in C. following are the only rate elements eligible for the Advance Payment Plan. The customer must pay the prevailing monthly rates and charges for all other rate elements and services as defined in their respective tariff schedules.

NOTE 1: To be implemented September 1, 1987.

NOTE 2: As defined in Schedule Cal.P.U.C. No. A2., Rule No. 1, Central Office. (L)
(L) Formerly in Schedule Cal.P.U.C. No. A9.

Continued

CATEGORY III SERVICES

D10. CENTREX

(T) (L)

10.2 CENTREX PAYMENT PLANS (Cont'd)

(T)

B. ADVANCE PAYMENT PLAN¹ (Cont'd)

(T)

5. Customers may prepay a minimum of twenty-five percent (25%) up to a maximum of one hundred percent (100%) of all Centrex lines. If 100% of the Centrex lines have been prepaid, customers also may prepay not less than 100% of all Centrex station, system and miscellaneous features. Customers prepaying less than 100% of all Centrex lines may not prepay for station, system or miscellaneous features.

All Centrex lines and/or associated station, system and miscellaneous features not covered by the Advance Payment Plan will be billed at the prevailing monthly rates or may be covered by the Fixed Rate Plan as defined in A., preceding. All Payment Plan Agreements for the same Centrex system must have the same expiration date.

6. The advance payment amount is determined by the following formula:

Total Amount of the Fixed Rate Plan Monthly Rates Listed in C. Following for The Selected Services	(X)	Advance Payment Factor
--	-----	---------------------------

a. Advance Payment Factors used to calculate the advance payment amount:

Selected Payment Period				
12 Mos.	24 Mos.	36 Mos.	48 Mos.	60 Mos.
11.375	21.671	30.991	39.428	47.065
72 Mos.	84 Mos.	96 Mos.	108 Mos.	120 Mos.
53.979	60.237	65.901	71.029	75.671

b. The advance payment factor is applied to reflect the present value of money. The advance payment for Centrex service will be equal to the present value of a customer's payments that would result from a Fixed Rate Plan of the same duration.

NOTE 1: To be implemented September 1, 1987.
 (L) Formerly in Schedule Cal.P.U.C. No. A9.

(L)

Continued

CATEGORY III SERVICES

D10. CENTREX

(T) (L)

10.2 CENTREX PAYMENT PLANS (Cont'd)

(T)

B. ADVANCE PAYMENT PLAN¹ (Cont'd)

(T)

6. The advance payment amount is determined by the following formula:
(Cont'd)

c. The advance payment factor will be periodically reviewed by the Utility and may be adjusted with forty (40) days prior notice to the C.P.U.C.

d. Once a customer has made an advance payment for service, the customer will not be required to pay additional payments, nor be entitled to refunds of prepaid monies if the advance payment factor is subsequently changed.

7. If available and subject to central office capacity, as determined by the Utility, the Customer may add Centrex lines and features. The rates for these service additions will be either:

a. Prevailing monthly rates, or

b. Fixed Rate Plan rates if any part of the system is covered under the Fixed Rate Plan, or

c. Advance Payment Plan rates if the customer pays for a minimum of fifty (50) lines.

Advance payments will be calculated using the rates, charges, and advance payment factor in effect at the time the service is added.

8. Additional advance payments may be made to an existing Advance Payment Plan, where less than one hundred percent (100%) of the original system was prepaid.

a. If the Customer prepays lines currently under the Fixed Rate Plan, the advance payment will be calculated using the rates shown under the Plan and the current advance payment factor.

b. To prepay for existing service not covered under the Fixed Rate Plan, the customer must enter into a new Advance Payment Plan.

NOTE 1: To be implemented September 1, 1987.

(L) Formerly in Schedule Cal.P.U.C. No. A9.

(L)

Continued

CATEGORY III SERVICES

D10. CENTREX

(T)(L)

10.2 CENTREX PAYMENT PLANS (Cont'd)

(T)

B. ADVANCE PAYMENT PLAN¹ (Cont'd)

(T)

9. Customers may relocate a Centrex System without penalty, provided central office facilities and operating conditions permit. All terms and conditions of the Plan remain in effect for the remainder of the payment period.

10. If the customer terminates this Plan in its entirety or moves to a location where Centrex service is unavailable, the customer will not be eligible for any refund of prepaid monies.

11. Partial system disconnects below the amount of service originally prepaid will not be eligible for any refund of prepaid monies.

12. Customers who upgrade their Centrex service to another Utility service will receive a refund amount as a credit against the cost of the new service. The credit amount will be determined in accordance with the following: (Unused percent of the Plan) X (Total amount prepaid) X (100%). The unused percent equals the unused months, in full month increments, remaining in the Plan divided by the total number of months originally prepaid in the Plan. Such credit will be applied to the customer's bill.

For purposes of this tariff, an upgrade is defined as enhancements which are offered as a substitution for existing systems, and which result in an increase in capacity or capability that would serve the same communication needs that were served by the Centrex system.

13. Customers of the Advance Payment Plan must pay the non-recurring charges in Schedule Cal.P.U.C. Nos. A3.1, A9.1.1, A9.1.6, and A9.1.8 for the original service, additions and/or moves and changes for those items covered by this Plan.

14. The offering of Centrex Payment Plans as shown in A., B. and C. is provisional and the offering will terminate on August 10, 1989 unless cancelled, changed or extended.

The Utility may offer the Advance Payment Plan until August 10, 1989, unless the Plan is sooner cancelled, or this date is otherwise shortened or extended. The above termination date affects only the Utility's ability to offer the Plan, and shall not act to terminate any Subscriber's individual plan, nor to otherwise affect the terms and conditions of any such individual plan. The terms and conditions of each Subscriber's plan, including but not limited to the length of such plan's term, shall continue to be as set forth in the applicable Agreement between Utility and Subscriber.

D10. CENTREX

10.3 RESTRICTED CENTREX SERVICE

(T)(L)

A. GENERAL

1. Description of Service

- a. Restricted Centrex Service is furnished by means of customer provided standard telephone instruments and cabinet type switching equipment installed at a customer location.

Basic Restricted Centrex Type I Service includes the following call-processing features:

- (1) Direct inward dialing to stations and attendant positions of the Centrex system.
- (2) Station identification and billing of outward dialed toll and Zone 3 of zone calling (ZUM) unit calls.
- (3) Intercommunication between lines of the same Centrex system.
- (4) Attendant-controlled transfer of incoming calls from one station to another station at the customer primary location.
- (5) Automatic interception of calls to unassigned station numbers and routing to a common recorded announcement.
- (6) Night connection.

- b. Restricted Centrex Type II Service offers as its transfer feature, station-controlled transfer of incoming calls and, in addition to the other features of Restricted Centrex Type I Service, offers the following station-controlled features:

- (1) Consultation hold of incoming calls.
- (2) Add-on conference of incoming calls.
- (3) Night answer any station.

(L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

CATEGORY III SERVICES
D10. CENTREX

10.3 RESTRICTED CENTREX SERVICE (Cont'd) (T)(L)

A. GENERAL (Cont'd)

1. Description of Service (Cont'd)

c. These features are available to all stations of a Restricted Centrex system which are located at a designated customer primary location. The basic features of a Restricted Centrex system may be extended to stations of the same system located at secondary customer locations where facilities and operating conditions permit.

d. Optional features available with Restricted Centrex type service are only those which are specified under the cabinet type (101ESS) serving arrangements.

e. Limitation of Service

As of July 26, 1976, the charges and rates for Restricted Centrex Service, apply only to those equipments furnished the same or superseding customer on the same premises.

Items of equipment, which are continued in service for existing customers only, may be retained by a customer as long as the equipment is repairable and the Utility is able to obtain repair parts under normal supply conditions. When this equipment becomes unrepairable or repair parts are unobtainable, the customer must forego further use of the equipment which will be removed by the Utility.

Customers desiring equivalent features of Restricted Centrex Service may be served by a compatible customer provided system.

f. The Primary Line rate in B. following includes exchange access trunking. (L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

10.4 AIRPORT INTERCOMMUNICATING SERVICE

(T)(L)

A. REGULATIONS

1. Airport Intercommunicating Service is furnished within the following exchange areas, as said areas are defined on maps filed as part of the tariff schedules, at designated airports. Such service is furnished off these airports in accordance with regulations contained in this schedule.

Service Exchanges

Airport Served

Inglewood	Los Angeles International Airport
South San Francisco	San Francisco International Airport
San Diego	San Diego International Airport
East Bay	Oakland International Airport
San Jose	San Jose International Airport
Irvine	John Wayne-Orange County Airport
Sacramento	Sacramento Metropolitan Airport

2. Airport Intercommunicating Service, also referred to as AIS or AIS Centrex Service, is furnished to:
- a. Customers engaged in the use of a designated airport as a transportation facility;
 - b. Customers engaged in the handling of passengers or air cargo;
 - c. Customers who provide service to passengers or air cargo of the airlines;
 - d. Governmental agencies concerned with the protection of life, safety or property; and
 - e. Governmental agencies which regulate the airport as a transportation facility.
3. AIS is not furnished to:
- a. Customers whose business is not directly related to activities identified in 2. above;
 - b. A hotel, motel or in a residence, nor
 - c. In locations of a semipublic or public nature, except as provided herein.

(L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

D10. CENTREX

10.4 AIRPORT INTERCOMMUNICATING SERVICE (Cont'd)

(T)(L)

A. REGULATIONS (Cont'd)

4. AIS and regular exchange service may be furnished from the same "serving exchange" concurrently to the same customer within the same building located within a designated airport property or within the exchange serving the designated airport. AIS and exchange service furnished from a contiguous or a noncontiguous exchange may be furnished concurrently to the same customer within the same building.

Mechanized primary station lines will be provided on a customer premises within a designated airport or within the serving exchange of that airport before other mechanized primary station lines of that customer will be installed in a contiguous or noncontiguous exchange. Minimum requirement is 2 primary lines with or without stations.

5. The following classifications of Airport Intercommunicating Service will be furnished to a customer who qualifies for AIS and who does not occupy a premises on a designated airport:

AIS Centrex Service will be furnished on a premises of the customer in the designated airport's serving exchange. Attendant equipment and/or AIS Centrex primary station lines will be installed on such premises. AIS Centrex primary, primary fully restricted or primary partially restricted station lines may then be installed in a contiguous or a noncontiguous exchange in accordance with rates and charges shown in this schedule. Also see 11. following and Stations and Extension Lines in D.3.c. following.

6. AIS customers may subscribe concurrently on the same premises to foreign exchange service.

D10. CENTREX

10.4 AIRPORT INTERCOMMUNICATING SERVICE (Cont'd) (T)(L)

A. REGULATIONS (Cont'd)

7. AIS is furnished by means of standard type customer provided telephone instrumentalities and by means of switching equipment installed on Utility premises.

With AIS Centrex station service the station trunking rates include an increment, on the basis of station lines, for the exchange trunk line facilities, except foreign exchange trunk line facilities, necessary to handle the incoming and outgoing exchange and message toll traffic of the AIS Centrex primary station lines.

Since primary fully restricted station lines and primary partially restricted station lines are not provided access to exchange trunk facilities furnished with mechanized station service the rates for trunking do not apply to these station lines.

8. Service Features

a. The basic service features AIS offers are:

- (1) Local calling within the local service area of the serving exchange identified under Territory, on a measured rate basis only.
- (2) Flat rate calling between AIS lines of the same or different customer of the same AIS by dialing five or less digits.
- (3) Local message usage, zone calling (ZUM) units or message toll charges apply, as for regular extended service of the serving exchange identified under Territory for all other calls.

b. Business individual line service

- (1) Features equivalent to business individual line exchange service, in addition to the basic service features shown in 8.a. above.
- (2) Service within the designated airport property for primary and extension station lines will be furnished at the rates and regulations shown herein.
- (3) The Utility will provide service up to and including its local loop demarcation point. It is the customer's responsibility to provide cable, wire, jacks, and equipment beyond the local loop demarcation point to complete the service to the desired location. (L)

8. Service Features (Cont'd)

b. Business individual line service (Cont'd)

(4) Service off the designated airport property, at the primary and extension line rates above and in D. following, will be provided subject to the following:

- Mileage rates for primary station lines are not applicable to services furnished off the designated airport property within the serving exchange.
- Primary station line exchange messages, zone calling (ZUM) units and joint user service rates and regulations within the serving exchange will be the same as that shown for business individual line services furnished from the serving exchanges as set forth in Schedule Cal.P.U.C. No. A5.1.4.
- Primary station line exchange messages, zone calling (ZUM) units, mileage and joint user rates and regulations in contiguous and noncontiguous exchange areas will be the same as that shown for business individual line services furnished from the serving exchanges as set forth in Schedule Cal.P.U.C. No. A5.1.4.
- Extension station line mileage rates in the same, contiguous and noncontiguous exchange areas will be the same as that shown for extension stations in Schedule Cal.P.U.C. Nos. A10.2 and A5.1.4, as appropriate.

c. PBX and ACD Service

(1) Features equivalent to PBX and ACD service, in addition to the basic service features as shown in 8.a. preceding.

(2) Regulations 8.b.(2), (3), and (4) preceding also apply to trunks.

9. AIS Centrex service, in addition to the basic service features in 8.a., preceding, offers:

- a. Direct in-dialing to AIS Centrex primary station service lines.
- b. Direct out-dialing from AIS Centrex primary station service lines.
- c. Call transfer-individual-all calls or Universal Call Transfer of calls from one station to another of the same customer with consultation hold and add-on conference and night answer any station of incoming AIS calls. These features may be provided off the airport property where facilities and operating conditions permit.
- d. The Utility will where facilities and operating conditions permit, arrange primary station lines to preclude their use for inward and/or outward exchange and message toll calls, to meet requirements of customers.
- e. Primary restricted stations may be furnished in locations of a public nature.
- f. Detail billing of Zone 3 of zone calling (ZUM) units and message toll charges by station line number, bulk billing of Zone 1 and Zone 2 exchange message charges by station line number.
- g. AIS Centrex primary fully restricted station lines do not have access to exchange trunks furnished with the mechanized station service (inward or outward), to the attendant nor may they be reached by the attendant, to access codes used to reach supplemental equipment services terminated in the switching equipment or other facilities that terminated in the switching equipment.
- h. AIS Centrex primary partially restricted station lines do not have access to the exchange trunks furnished with the AIS Centrex station service (inward or outward) or to the attendant nor may they be reached by the attendant. These station lines are furnished where facilities and operating conditions permit. (L)

10. Tie Lines/Special Access Voice Grade Channels

- a. When tie lines or special access voice grade channels are furnished to connect an AIS system to an ACD system, PBX system, a Centrex system or to another AIS system or when special access voice grade channels are furnished to connect a customer-provided multiline terminating system equivalent to an ACD, a PBX and/or a Centrex system to an AIS system, the tie lines, special access voice grade channels will be denied access to the local trunk facilities of the AIS system except where such tie line type facilities are arranged for access to the local trunk facilities of the AIS system as provided in D.3.e.(1) following.

Exchange and toll message diverting arrangements if required on the central office trunks, will be customer-provided.

- b. Tie lines, special access voice grade channels that are arranged to permit tandem operation may be equipped to selectively tandem to some such lines but not to others when served by the AIS, South San Francisco, San Francisco International Airport only.
- c. Where tie line or special access voice grade channel telephone line service is furnished with AIS, only the AIS stations of the same customer are provided access to these lines. These lines may access stations of the same or other AIS customers.
- d. In accordance with the Federal Communications Commission Order CC Docket No. 79-143 amending Part 68 of the Commission's Rules and Regulations to allow for direct connection of terminal equipment and systems to certain Category III services, the following is required in addition to the above at no increase in rate:

Signaling Arrangements - except for continuous property

For tie line operation channels used with private branch exchange (PBX) to PBX, PBX to Centrex or similar multiline terminating system arranged with an E&M type signaling interface. (USOC: SLM)

11. Mileage

AIS Centrex Service

- a. Within the serving exchange or in an exchange contiguous to the serving exchange of the Utility:

AIS Centrex service lines may be furnished on the premises of the same customer where facilities and operating conditions permit. Mileage charges apply, in addition to the regular rates and charges for such station lines.

- b. Within an exchange noncontiguous to the serving exchange of the Utility:

Where AIS Centrex primary, primary fully restricted or primary partially restricted station lines are located in a noncontiguous exchange, the channel mileage rate only, as shown in Schedule Cal.P.U.C. No. A10.2 applies in addition to the regular rates and charges for such station lines.

- c. Individual line extension station lines and PBX station lines of PBX service:

Secretarial line extensions of such services may be furnished to a telephone answering equipment on or off the airport property in the same, contiguous or noncontiguous exchange at rates shown in Schedule Cal.P.U.C. No. A9.3.

In connection with individual line and PBX service within a designated airport:

Individual line extension station lines and PBX station lines of PBX service may be furnished off the airport property in the same or contiguous exchanges at mileage rates and in accordance with regulations in Schedule Cal.P.U.C. No. A10.2, except that mileage will be measured to the nearest point on the airport property rather than to the terminal within the airport property.

In connection with business individual line service installed off the designated airport:

Individual line extension station lines will be furnished in the same, a contiguous or noncontiguous exchange at mileage rates and in accordance with regulations shown in Schedule Cal.P.U.C. No. A5.1.4.

12. Miscellaneous

- a. Where tie line or interexchange channel - interwire center private line telephone line service is furnished with AIS, only the AIS stations of the same customer are provided access to these lines. These lines may access stations of the same or other AIS customers.
- b. Reserved
- c. Arrangements using central office equipment for access codes are offered subject to the operating limitations of the central office equipment and the associated terminating equipment.
- d. Equipment arrangements, rearrangements and services available for use with Dial-Series 100 and 300 PBX service and Centrex service will be furnished where suitable, with AIS unless otherwise specified in the tariffs. Where furnishing such arrangements and rearrangements involves costs in excess of those contemplated by filed tariffs, additional charges may be applicable, subject to prior authorization of the Public Utilities Commission of the State of California.
- e. Joint user service is applicable and will be furnished upon application by the customer subject to the rates set forth in D.10. following, and regulations of Schedule Cal.P.U.C. No. A5.6.
- f. Verification of busy line condition and/or interruption of a conversation in progress at the calling party's request will be provided as set forth in Schedule Cal.P.U.C. No. A5.8.1.

13. Sectional Billing Service

- a. The Utility will render to the customer, in accordance with D.3.f. following, a statement that will consist of two or more sectional bills as determined by the customer.
- b. A sectional bill may include all exchange message, zone calling (ZUM) units and message toll charges, credits, charges and rates for exchange service, supplemental equipment, directory listings and classified directory advertising charges associated with AIS Centrex station service line numbers included in each sectional bill.

15. Attendant Equipment

- a. Customers to AIS Centrex service are not required to have attendant equipment. Attendant equipment may be required for night connection arrangements of listed number trunks, and for the manual termination of tie lines, special access voice grade channels or foreign exchange trunk lines, where facilities and operating conditions permit.
- b. Additional positions of attendant equipment furnished under Rates and Charges D.3.a. (USOC: RXX) may be installed at a location remote from the primary attendant equipment in the same building where facilities and operating conditions permit.

Attendant equipment at a remote location in a different building within the designated airport property or in a different building on the customer's continuous property within the serving exchange of the designated airport will be provided at charges and rates shown above where facilities and operating conditions permit. A charge for labor and materials will apply to the cable furnished between the buildings involved. See Schedule Cal.P.U.C. No. A8.4.

17. Detariffing

Effective January 1, 1983, in accordance with the order of the FCC in Docket 20828, customer premises equipment, as defined by the FCC, will be provided by the Utility for use with new or existing service only so long as such equipment is available from Utility inventory acquired prior to January 1, 1983, except as otherwise permitted by the FCC.

The Utility will continue to provide maintenance for the Utility-provided customer premises equipment subject to the availability of replacement parts and/or equipment.

USOCs AFFECTED by this action are:

RXX, JPF, P24AA and B24

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (T)(L)

A. DESCRIPTION

1. Central Office Electronic Tandem Switching, hereinafter is referred to as ETS/CO, is furnished as an additional feature offering to Centrex Central Office (CO) and Airport Intercommunicating Service (AIS). When the term Centrex is used herein, it also includes AIS. ETS/CO utilizes equipment in a Utility's properly equipped central office to provide cost control, facility management and additional convenience features.
2. The ETS/CO group of features furnished in this schedule can be provided in four configurations:
 - a. Centrex alone
 - b. Electronic Tandem Network (ETN) with the Centrex as the tandems.
 - c. Intercity Facilities Concentrators as the main Centrex with PBXs gaining access to intercity services.
 - d. Main/Tributary/Satellite configurations, as the main Centrex with access to a Common Control Switching Arrangement (CCSA) or Enhanced Private Switched Communications System (EPSCS) network.
3. ETS/CO will not be provided to Centrex Systems equipped with less than 20 Primary Lines/Primary - Semi-Restricted lines.

B. REGULATIONS

1. Automatic Route Selection - Deluxe (ARS-D)
 - a. Facility Restriction Levels, (FRL) is a required feature of ARS-D for all tie lines, Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface.
 - b. Preferred routes and alternate routes in patterns will be specified by the customer. ZUM Zone 3 and IntraLata toll calls may be completed over the customer's private facility as defined in D.1, following.
 - c. A maximum of ten routes may be provided in a pattern.
 - d. Each WATS band is treated as a separate route.
 - e. A maximum of three ARS-D Pattern Group for TOD routing with a maximum of sixty-four patterns in each Pattern Group will be provided.

(L) Formerly in Schedule Cal.P.U.C. No. A9.

D10. CENTREX

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd)

(T)(L)

B. REGULATIONS (CONT'D)

1. Automatic Route Selection - Deluxe (ARS-D) (Cont'd)

f. A maximum of sixty-four Number Plan Areas (including the home NPA) may be designated by the customer for routing of calls by central office codes (six digit translation).

g. All rates and charges specified for ARS-D are in addition to the rates and charges for the associated facilities and facility terminations.

h. A single rate "per facility terminated in patterns" will apply regardless of the number of patterns having access to that facility. The monthly rate specified is applicable to each facility available to the patterns.

i. The charges specified in E. following, are applicable for each code addition or change.

j. Where ARS-D is furnished in connection with UN/AAR, tie lines, Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface to other PBX or Centrex system locations may appear as routes in ARS-D patterns when such tie lines/Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface are provided for subsequent access to the toll network at the distant PBX or AIS/Centrex system location.

k. The TOD Routing feature permits up to sixteen programmed changes in Pattern Groups per week. When additional ARS-D patterns are required due to TOD changes, rates and charges as specified in E. following, apply to each additional pattern.

l. Off-net calls from CCSA access lines and access lines to CCSA and other similar arrangements, compatible with ARS-D, may be included as routes in patterns.

m. Centrex toll diversion and restriction does not function on calls routed via ARS-D.

2. Facility Restriction Levels (FRL)

a. FRL is furnished in association with ARS-D, UN/AAR and/or Authorization Codes.

b. A maximum of eight FRL values are available for each Centrex system.

c. A maximum of twenty thousand Authorization Codes are available for each Centrex system. They are ordered in blocks of 100.

(L) Formerly in Schedule Cal.P.U.C. No. A9.

D10. CENTREX

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd) (T)(L)

B. REGULATIONS (Cont'd)

2. Facility Restriction Levels (FRL) (Cont'd)

- d. Authorization Codes must consist of a uniform number of digits, with a minimum of three digits and a maximum of six digits.
- e. Customer implementation of change of Authorization Codes or associated FRL require the Facilities Administration and Control Feature.
- f. All incoming tie line/Special Access Voice Grade Channel terminations, Primary Rate IS or Direct Digital Interface with access to ARS-D must be equipped with FRL.

3. Deluxe Queuing

- a. Calls in queue may overflow to subsequent routes or to tone at the customer option.
- b. Deluxe Queuing is available with facilities appearing as the primary (first choice) route in ARS-D or UN/AAR patterns.
- c. The music source for "Music on Queue" must be provided by the customer.
- d. The text of the announcement will be prepared and provided with the Recorded Announcement option by the Utility.
- e. Customer must specify the length of time a call is held in queue (threshold time limit) before overflowing to subsequent routes or overflow tone.
- f. A special access voice grade (VG32) channel is required between the serving central office and the customer premises music source.

4. Station Message Detail Recording to Premises (SMDR-P)¹

- a. SMDR-P is not represented to be a provision of billing detail.
- b. Station message detail records will be provided on terminal equipment located at the customer's premises at the rates and charges specified in E. following.
- c. Processing of message detail information (SMDR-P) will be performed by the customer at their expense.

NOTE 1: SMDR-P is grandfathered effective February 10, 2000. See Schedule Cal.P.U.C. No. A2.1.2,A.4. SMDR-P will continue to be provided through October 30, 2000, at which time the service will be withdrawn.

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd) (T)(L)

B. REGULATIONS (Cont'd)

4. Station Message Detail Recording to Premises (SMDR-P)¹ (Cont'd)

- d. The customer must designate all station lines in a Centrex customer group and or selected facility groups on which SMDR-P originating and terminating records are to be provided.
- e. Where SMDR-P is provided, a detailed record may be made for each completed call. At the option of the customer, arrangements can be made to provide records of calls attempted as well as calls completed. Under certain conditions, with SMDR-P, calls may be processed without recording the call detail.
- f. SMDR-P includes the recording of Account Codes and Authorization Codes where these optional features are provided.

5. Customer Administration and Control Features

- a. Customer Administration and Control Features are comprised of either or both the Facilities Administration and Control ETS optional feature and the Traffic Data to Customer (Pollable)/FAR ETS optional feature.
- b. Traffic Data to Customer (Pollable)/Facility Assurance Reports (FAR) may be provided to Centrex systems which are not equipped with the ETS features of ARS-D and FRL.
- c. The ARS-D is a prerequisite for Facilities Administration and Control.
- d. Facilities Administration and Control provides:
 - (1) Selection of ARS-D pattern groups and determines status.
 - (2) Activation/deactivation of queuing and determines status.
 - (3) Changes of Authorization Codes and associated FRL's.
- e. Traffic Data to Customer (Pollable) provides:
 - (1) FAR reports listing trunks not accessed and all trunks continually off-hook in the previous two hours.
 - (2) Traffic data reports on trunk groups and queues.

6. Uniform Numbering/Automatic Alternate Routing (UN/AAR)

NOTE 1: SMDR-P is grandfathered effective February 10, 2000. See Schedule Cal.P.U.C. No. A2.1.2,A.4. SMDR-P will continue to be provided through October 30, 2000, at which time the service will be withdrawn.

B. REGULATIONS (Cont'd)

6. Uniform Numbering/Automatic Alternate Routing (UN/AAR) (Cont'd)

- a. All call attempts must consist of an access code, Account Code where provided and a seven-digit telephone number.
- b. The customer must specify the first choice route and each subsequent route to each Centrex or PBX System involved.
- c. The customer must notify the Utility when any change in route or routing sequence is desired.
- d. The maximum number of routes in a pattern is four.
- e. The maximum number of patterns is one hundred-eighty.
- f. When overflow to the DDD network is provided, rates and charges for trunk line service and toll messages are applicable.
- g. The following rates and charges apply per tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface facility terminated in UNAAR and/or ARS-D, regardless of the number of patterns which access each facility.

7. Direct Digital Interface (DDI)

- a. When DDI is used for interexchange interwire center terminations: all stations must be touch tone, dial pulse is not permitted and signaling must be senderized.
- b. When DDI is used as tie lines: all stations must be touch tone, dial pulse is not permitted; the signaling must be either pure cut-through or senderized, both are not permitted. DDI tandem cut-through operation is not permitted.

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd)

(T)(L)

D. FEATURE DEFINITIONS

1. Automatic Route Selection - Deluxe (ARS-D)

ARS-D provides automatic routing of outgoing calls over alternative customer facilities based on the call destination. The station user or attendant dials a facilities access code, (e.g. "level 8") followed by a telephone number. The maximum number of digits dialed for a telephone number may vary depending on the proper program updates of the serving central office and if the Centrex is a stand-alone configuration. The Centrex routes the call over the first available special trunk facility, selected in a customer-specified order. A Route is a customer private facility used to complete direct dialed chargeable calls such as; WATS access line, CCSA - offnet, Separate local exchange trunk, foreign exchange trunk, tie line/Special Access Voice Grade Channels, Primary Rate ISDN or Direct Digital Interface.

The final route for completing the call attempt may be the DDD network, or at the option of the customer, the call attempt is routed to overflow tone if a Facility Restriction Level (FRL) indicates a nonprivileged call.

At the option of the customer a tone can be supplied when a "Higher Cost Route" (HCR) is selected by the ARS-D.

When ARS-D is provided in conjunction with Uniform Numbering/Automatic Alternate Routing (UN/AAR), incoming tie lines and Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface from other Centrex or PBX Systems connected directly to the Centrex System may be arranged to have automatic access to the ARS-D and UN/AAR features. The station user or attendant dials a facilities access code, (e.g. "level 8") followed by a 10-digit Network Number. When such arrangements are provided, the tie lines/Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface to the ARS-D become "dedicated" tie lines/Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface. Separate tie lines/Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface are required from the distant Centrex or PBX System if access is to be provided to other Centrex functions at the ARS-D equipped Centrex System. In addition, when ARS-D is provided in conjunction with UN/AAR, routes may include tie lines/Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface to a distant Centrex or PBX System equipped with ARS-D like capability for subsequent access to the DDD network.

(L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

CATEGORY III SERVICES

D10. CENTREX

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd) (T)(L)

D. FEATURE DEFINITIONS (Cont'd)

1. Automatic Route Selection - Deluxe (ARS-D) (Cont'd)

Time of Day Routing (TOD) is an ARS-D option which permits preprogrammed selection of alternate routing pattern groups for off-network calls (up to three sets of ARS-D routing pattern groups) on a time-of-day and day-of-week basis. Manual override is available with Facility Administration and Control feature. The maximum number of programmed changes per week is sixteen.

2. Facility Restriction Levels (FRL)

FRL is required in connection with ARS-D, however, a FRL can be used independently of ARS-D in Digital Switching System central offices and is provided on each station and incoming tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface to determine both the types of calls and types of facilities that may be used by the associated station user. In addition, a FRL may be provided on an Access Code. When the FRL is transmitted over a tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface to a distant PBX or Centrex System equipped with ARS-D (for call screening at the distant point), it is identified as a Traveling Class Mark (TCM).

Authorization Codes are a FRL option which provides for a station user to dial a code which overrides the FRL associated with that station line or incoming tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface. The Centrex requests dialing of the authorization code by returning recall dial tone when the default FRL (i.e., the FRL associated with the station line or incoming tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface) will not permit the call. The Authorization Code is also inspected for validity as a security check. The Authorization Code is recorded in the SMDR-P record of the call when the SMDR-P feature is provided.

CATEGORY III SERVICES

D10. CENTREX

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd)

(T)(L)

D. FEATURE DEFINITIONS (Cont'd)

3. Deluxe Queuing

Deluxe Queuing permits station users to be placed in a queue whenever the first choice route for completing a particular call is already in use. Two queuing arrangements are available.

A Ring-Back Queue (RBQ), in which case the calling station goes on-hook and is called back when a facility becomes available.

An Off-Hook Queue (OHQ), in which case the calling station remains off-hook and is held in queue until a facility becomes available.

All stations must be arranged for the same type queue within the equipped Centrex group but they can be programmed for either the Ring-Back or Off-Hook Queue. Station calls to the Centrex by tie lines/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface are limited of Off-Hook Queuing. The customer can combine RBQ from stations at the equipped Centrex and OHQ from stations at secondary locations.

If all of the facilities allowed by the station user's FRL in the routing pattern are busy, the call will be placed in queue on the first choice facility. When the call is placed on OHQ, the station user will be connected to an announcement or music until an idle trunk becomes available and the called number is outpulsed.

(L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

Continued

CATEGORY III SERVICES

D10. CENTREX

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd)

(T)(L)

D. FEATURE DEFINITIONS (Cont'd)

3. Deluxe Queuing (Cont'd)

Calls held in queue beyond a predetermined time limit will be removed from the queue and be routed, at the option of the customer, via either subsequent route choices or to overflow tone.

4. Station Message Detail Recording to Premises (SMDR-P)¹

SMDR-P provides a record, on terminal equipment located on the customer's premises, of calls originating from Centrex station lines to locations outside the same Centrex System. Facility groups may also be designated as requiring originating and/or terminating records.

Account Codes are a SMDR-P option which permit a station user to dial a series of digits (account code) which will appear in the SMDR-P record for that particular call. The Account Code can be used by the customer for account or project identification. Adding an Account Code to a call, where arrangements have been made to provide this capability, is at the discretion of the station user. Each customer's Account Code must contain the same number of digits, not to exceed eight, and must not conflict with on-network code assignments.

5. Customer Administration and Control Features (CA&C)

Facilities Administration and Control, Facility Assurance Reports and Traffic Data to Customer are CA&C features. These features are provided by Customer Administration Center (CAC) and/or Local Customer Administration Terminal (LCAT).

The CAC terminal and the LCAT use an interactive language for central office switch input/output. The CAC terminal prints output that is stored and formatted by the CAC while the LCAT prints output directly from the central office switch. LCAT is a simplified alternative to CAC.

Facilities Administration and Control permits customer control of parameters which determine user calling privileges; i.e., Authorization Codes and associated FRL. In addition, FRL associated with stations, tie lines/Special Access Voice Grade Channel and Authorization Codes may be collectively upgraded or downgraded by invoking a predetermined set of FRL's identified as Controlled Alternate FRL's. Manual Control (override) of TOD Pattern Groups and activation or deactivation of queuing is also provided.

NOTE 1: SMDR-P is grandfathered effective February 10, 2000. See Schedule Cal.P.U.C. No. A2.1.2,A.4. SMDR-P will continue to be provided through October 30, 2000, at which time the service will be withdrawn. (L)

D10. CENTREX

10.5 CENTRAL OFFICE ELECTRONIC TANDEM SWITCHING (Cont'd) (T)(L)

D. FEATURE DEFINITIONS (Cont'd)

5. Customer Administration and Control Features (CA&C) (Cont'd)

Traffic Data to Customer (Pollable) provides the customer with the capability to automatically poll the switching equipment on a daily or hourly basis to obtain traffic measurements including peg counts, Hundred Call Seconds (CCS) usage, overflow and for queues, number of abandons, and number of queue "time-outs". Equipment must be provided at the customer's premises to record the traffic data.

Facility Assurance Reports (FAR) provides the customer with the ability to obtain automatic circuit assurance data via the same equipment utilized to record traffic data. FAR includes, for example, the identity of facilities not accessed or facilities continually off-hook during a specified period of time.

6. Uniform Numbering/Automatic Alternate Routing (UN/AAR)

UN permits station users to place calls via tie lines/Special Access Voice Grade Channels, Primary Rate IS or Direct Digital Interface using a uniform dialing plan. The user dials an access code, followed by a seven-digit number which uniquely identifies a specific on-network station line. The number consists of a three-digit location code and a four-digit station line code. (When the same access code is followed by a ten-digit DDD network number, the call is routed via the ARS-D feature.) The feature provides the translation and supervision necessary to route the call.

AAR provides automatic routing of on-network calls to alternate tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface routes when primary tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface routes are busy.

Automatic Overflow to DDD provides completion of on-network calls via the DDD network when all primary and alternate tie line/Special Access Voice Grade Channel, Primary Rate IS or Direct Digital Interface routes are busy.

10.6 OPTIONAL FEATURES

(T)(L)

A. TRAFFIC DATA COLLECTION

1. Description

Traffic Data Collection equipment provides the usage information required to administer the attendant consoles and trunking requirements. One such arrangement is:

Selected Traffic Data to Customer Traffic Feature (CTRF) which is an arrangement of the Central Office Equipment that has the capability of traffic data collection.

2. Regulations

a. Feature

CTRF is a feature of the Central Office (CO) that provides traffic data for Centrex CO Systems. CTRF is offered where facilities and operating conditions permit. CTRF collects traffic data related to customer's attendant positions, trunk groups and miscellaneous traffic counts. After the traffic information is collected, it is transmitted to the customer's premises over a dedicated facility. The total number of channels available for a CTRF per CO is limited to the availability of facilities and CO capacity as determined by the Utility.

b. Customer Traffic Group (CTFG)

CTFG identifies the data in the Central Office Equipment that describes the traffic counts to be collected and printed for a customer.

Usually only one CTFG is required per customer. Additional CTFG's must be added when the customer exceeds 245 traffic counts or when specified traffic data is to be printed at different time intervals.

(L)

(L) Formerly in Schedule Cal.P.U.C. No. A9.

Continued

CATEGORY III SERVICES
D10. CENTREX

10.6 OPTIONAL FEATURES (Cont'd)

(T)(L)

- A. TRAFFIC DATA COLLECTION (Cont'd)
2. Regulations (Cont'd)

c. Traffic Counts

There are four types of traffic data provided with CTFG. They are as follows:

Incoming call peg count	Overflow peg count
Outgoing call peg count	Traffic usage

The customer can specify the rate at which the traffic counts are to be printed (maximum of once every half hour or minimum once per day). The items printed, as well as the report format, is variable and can be arranged by customer request to the Utility.

Non-Usage Trunk Scan (NUTS) prints a list of customer trunks (except those using simulated facilities) that have not been found traffic busy on incoming or outgoing calls during the preceding two hours. NUTS is an optional feature to CTRF and must be ordered with LUTS.

Locked-Up Trunk Scan (LUTS) identifies trunks that have been locked up (off-hook) during the preceding two hours. LUTS is an optional feature of CTRF and must be ordered with NUTS.

d. Traffic Labels

A Traffic Label is a three character acronym (alpha, numerical or a combination of both) used to identify traffic counts. The customer may use standard traffic labels established for CTRF or develop unique labels.

Labels can be used as either column headers (in which case, there would be five columns) or a3 row labels (in which case, the label would be followed by five counts).

e. Data Group (DAG)

DAG is an arbitrary assignment to identify a customer's multi-line hunt group in the Central Office Equipment.

f. Non-Usage Trunk Scan (NUTS) and Locked-UP Trunk Scan (LUTS)

NUTS/LUTS inhibit arrangement provides a method of stopping the collection of certain traffic data items.

10.7 CENTREX MILITARY TRUNKS

(T)(L)

A. APPLICABILITY

Applicable to Centrex Trunk Line Service furnished to U.S. Departments of the Army, Navy and Air Force.

B. REGULATIONS

1. Centrex trunk line service will be furnished in connection with dial telephone systems of the U.S. Departments of the Army, Navy and Air Force in accordance with Schedule Cal.P.U.C. No. A8.1.8.
2. Rates for Centrex trunk line service include:
 - a. Incoming local central office trunks arranged to transmit the last four digits of a seven digit telephone number to the customer's dial switching facility.
 - b. Seven digit identification of outward toll and Zone 3 Zone Usage Measurement traffic.
 - c. Detail billing of toll traffic and Zone 3 Zone Usage Measurement traffic by a seven digit telephone number.
3. In the event Centrex trunk lines incoming to the customer's dial switching facility are not retained in conjunction with exchange service for a period of five years, the customer shall pay to the Utility upon demand, the amount of the "Basic Termination Charge" for each Centrex trunk line discontinued, less one sixtieth (1/60) of that amount for each full month such line was retained in service. The last Centrex trunk line installed shall be considered to be the first Centrex trunk line removed.

Where the entire service is discontinued, the "Basic Termination Charge" shall be based on the minimum number of Centrex trunk lines as shown in B. following, and, where applicable, on the Centrex trunk lines discontinued which were in addition to the minimum.

4. The customer shall provide mechanical facilities, arranged for no-charge supervision, for intercepting unassigned telephone numbers.

B. REGULATIONS (Cont'd)

- 5. In the event the Utility changes its method of operation of serving arrangement, the customer shall suitably arrange their equipment to be compatible with the Utility's equipment or method of operation.
- 6. These rates, charges and regulations apply only to service ordered or in-service on or before April 10, 1980, furnished to the same or superseding customer on the same premises. Where Centrex Trunk Line Service has been established for a customer, additional Centrex Trunk Lines may be added to the existing service.

10.8 MECHANIZED SWITCHING SYSTEM SERVICE

(T)(L)

A. REGULATIONS

1. Mechanized Switching System Service is furnished within the exchange area of the San Francisco exchange as said exchange is defined on maps filed as part of the tariff schedules.
2. The rates for mechanized switching system service lines include the following service and equipment arrangements:
 - a. Mechanized switching service line with or without a telephone set.
 - b. Circuits and switching equipment necessary to handle dial intercommunication between stations and traffic between attendant positions and the switching system.
 - c. Each station line in the system can be called from outside the system either directly (direct inward dialing) or through the attendant.
 - d. Each station line in the system can call outside the system either directly (direct outward dialing) or through the attendant. Zone calling (ZUM) units or toll calls will be identified with the number of the calling line.
 - e. Direct inward dialed calls to vacant terminals will be automatically intercepted and given an appropriate prerecorded announcement.
 - f. Incoming calls may be transferred between stations in the system. See 6. following.
3. The offering of mechanized switching system service is conditioned upon the Utility being furnished the necessary space on the customer's premises for equipment to provide the service.

10.8 MECHANIZED SWITCHING SYSTEM SERVICE (Cont'd)

(T)(L)

A. REGULATIONS (Cont'd)

4. The switching equipment required to provide the mechanized switching system service will be furnished by the Utility subject to a contract with the customer providing as follows:

If the entire service is discontinued during the first ten (10) year period following installation, the customer shall pay to the Utility, upon demand, a basic termination charge comprising the total cost of the switching equipment and its installation, less the value of recoverable equipment, plus the estimated cost of removal, less a credit of 1/120 of said charge for each month the switching equipment was retained in service. If a portion of the stations are removed during said ten (10) year period and if a portion of the switching equipment is then no longer required to provide the service, the customer shall pay to the Utility, upon demand, a prorated portion of the foregoing basic termination charge, except that there shall be no termination charge applicable to the first 500 stations installed in the system. For this purpose the last 500 stations removed shall be deemed to be the first 500 stations installed.

Upon request of the customer to move the entire mechanized switching system service from one location to another location on the same premises or to other premises of the customer, which move is acceptable to the Utility and is within the same telephone exchange area, the Utility shall transfer the switching equipment or at the Utility's option, install replacing switching equipment, subject to the following regulations:

- a. If said transfer is made during the first ten year period following installation of the mechanized switching equipment, the customer shall pay to the Utility, upon demand, an amount equal to the actual cost of transferring said switching equipment.
- b. If said transfer is made after the first ten year period following the installation of the mechanized switching equipment, the customer shall execute a new agreement with the Utility in which the "basic termination charge" shall be the actual cost of transferring said switching equipment.
- c. The Utility's estimate of cost of transferring the switching equipment shall be substituted for the actual cost of transferring the switching equipment when replacing switching equipment is installed by the Utility in lieu of transferring the switching equipment.

- 10.8 MECHANIZED SWITCHING SYSTEM SERVICE (Cont'd) (T)(L)
- A. REGULATIONS (CONT'D)
5. Except as otherwise provided in this schedule, service and equipment arrangements or rearrangements available in connection with Commercial PBX Service will be furnished in connection with Mechanized Switching System Service in accordance with the rates, charges and tariff provisions applicable to Commercial PBX Service for such arrangements or rearrangements.
 6. Auxiliary manual or dial switching equipment or subsidiary dial switching equipment will be provided, in connection with mechanized switching system service only on the same premises. Stations associated with the auxiliary or subsidiary equipment are mechanized switching stations and form a part of a mechanized switching system. They are combined with those of the main mechanized switching system for purposes of determining charges.
 7. Where equipment and operating conditions permit, transfer of calls between stations involving stations connected to a subsidiary or auxiliary system may be provided and at additional charges where additional circuits and equipment are required.
 8. The rates and regulations apply only to systems ordered or in service on or before February 21, 1962, furnished to the same or superseding customer on the same premises.
 9. Attendant positions of the 607A type are also required with this service. (L)
