Consumer Confidence Report Certification Form (to be submitted with a copy of the CCR)

(to certify electronic delivery of the CCR, use the certification form on the Department's website at <http://www.cdph.ca.gov/certlic/drinkingwater/Pages/CCR.aspx>)

Water System Name: Rosehart Industrial Park Water System

Water System Number: 2702121

The water system named above hereby certifies that its Consumer Confidence Report was distributed on _____ (date) to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the California Department of Public Health.

Certified by: Name: Thomas R. Adcock
Signature:
Title: President
Phone Number: (831) 424-0441 Date: 6/30/14

To summarize report delivery used and good-faith efforts taken, please complete the below by checking all items that apply and fill-in where appropriate:

- CCR was distributed by mail or other direct delivery methods. Specify other direct delivery methods used: CCR was mailed to all customers as a water bill insert on May 28, 2014.
- "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods:
 - Posting the CCR on the Internet at www._____
 - Mailing the CCR to postal patrons within the service area (attach zip codes used)
 - Advertising the availability of the CCR in news media (attach copy of press release)
 - Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of newspaper and date published)
 - Posted the CCR in public places (attach a list of locations)
 - Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools
 - Delivery to community organizations (attach a list of organizations)
 - Other (attach a list of other methods used)
- For systems serving at least 100,000 persons: Posted CCR on a publicly-accessible internet site at the following address: www._____
- For privately-owned utilities: Delivered the CCR to the California Public Utilities Commission

This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c), California Code of Regulations.

 Rosehart Industrial Park
 Water System

**ROSEHART INDUSTRIAL PARK WATER SYSTEM
 Consumer Confidence Report 2013**

It's that time of year again, when Alco's Rosehart Industrial Park Water System ("Rosehart") shares important information about your water quality with you, our customers! Rosehart monitors the drinking water quality for many constituents as required by State and Federal Regulations. This Consumer Confidence Report (CCR) is a summary of the quality of the water provided to you by Rosehart and shows the results of our monitoring for the period of January 1 through December 31, 2013. There is a list of important definitions and abbreviations of reporting units included in the CCR for your convenience.

If you have any questions about this information, please contact Thomas R. Adcock, Monday to Friday, 8AM to 5PM at (831) 424-0441. Any water related public meetings will be announced in water bill inserts or by direct mailing.

What's new with your water service?

DROUGHT AWARENESS: It's time for all of us to become more aware of the importance of saving water and of the real value our water contributes to everyday life. Teamwork is the answer to solving our water drought problems and we are ready for the task! With your help, our goal is to reduce water use by **20%**! Water conservation is not only a good idea overall, but it helps to put dollars and cents back into your wallet!

PLEASE get involved this year in conserving water and in promoting responsible water use in your own business and business community! We are here to help you with suggestions and advice, as well as help with your specific problems and questions. We offer water conservation kits to customers as an effort to get you started on the right track to use less water. We also offer individual assistance with helping you to figure out if you have leaks in your business.

If you have any problems, questions, suggestions, or concerns, please call us during regular business hours, or leave a message after hours with our live answering service at (831) 424-0441. Also, you can visit us at our office or send us a note in the mail to Alco Water Service, 249 Williams Road, Salinas, CA 93905 or e-mail us at mail@alcowater.com. We look forward to hearing from you!

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Where does your water come from?

Alco Water Service's Rosehart Industrial Park Water System has 1 active water source, which is a groundwater well. The well draws from aquifers in one sub-area of the Salinas Groundwater Basin; the Pressure Area. A Source Water Assessment was performed in 2002 and a copy of the Vulnerability Summary is available upon request.

The water sources are most vulnerable to high density septic systems, and to the activities of nearby businesses and agricultural areas.

Laboratory testing:

Rosehart contracts with independent, state-certified laboratories to monitor the quality of the water it provides to you. This helps us to provide you with the best quality water possible and to conform to CDPH regulations.

Rosehart also contracts with an independent sampler who collects all samples for monitoring purposes and delivers them to the independent laboratories directly. The laboratory water quality results contained in the table sections of this report are of detectable constituents only. This means that there was a detection of the constituent found in the water by the laboratory. The tables also include a list of the State and Federal standards so that you may compare the results of our water analyses to them. The water system tests for hundreds of regulated and unregulated constituents and submits the results to CDPH. The constituents that do not appear on the table are non-detectable. This means that there was no detection of the constituent found in the water by the laboratory.

What can be found in water?

The sources of drinking water (both tap water & bottled water) include rivers, lakes, streams, ponds, reservoirs, springs & wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- ✓ *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, & wildlife.
- ✓ *Inorganic contaminants*, such as salts & metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil & gas production, mining, or farming.
- ✓ *Pesticides & herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, & residential uses.

- ✓ *Organic chemical contaminants*, including synthetic & volatile organic chemicals, that are by-products of industrial processes & petroleum production, & can also come from gas stations, urban stormwater runoff, agricultural application, & septic systems.
- ✓ *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the CDPH prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. CDPH regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Additional Drinking Water Information

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Rosehart is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA					
Rosehart Industrial Park Water System had 12 samples collected for routine bacteriological quality testing in 2013.					
Microbiological Contaminants	Highest # of Detections (in a month)	# of months in violation	MCL	MCL G	Typical Source of Bacteria
Total Coliform Bacteria (Total Coliform Rule)	0 samples (0%)	0	More than 1 positive sample monthly	0	Naturally present in the environment

SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER
 In September of 2013, 5 samples were collected in consumers' businesses and analyzed for lead and copper. Rosehart Industrial Park Water System is required to perform this monitoring every three years by CDPH. The following is a summary of the results:

Lead & Copper (& reporting units)	# of samples collected	90 th percentile level detected	# of Sites exceeding AL	AL	PHG	Typical Source of Contaminant
Lead (µg/l)	5	<5	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (mg/l)	5	0.330	0	1.3	0.3	Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives

SAMPLING RESULTS FOR SODIUM AND HARDNESS

Chemical or Constituent (& reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (mg/l)	10/30/2012	44	44	none	none	Salt present in the water; generally naturally occurring
Hardness (mg/l)	10/30/2012	180	180	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium; usually naturally occurring

DETECTION OF UNREGULATED CONTAMINANTS

Chemical or Constituent (& reporting units)	Sample Date	Average Level Detected	Range of Detections	Notification Level	Typical Source of Contaminant
Boron (µg/l)	10/26/2011	160	160	1,000	The babies of some pregnant women who drink water containing boron in excess of the notification level may have an increased risk of developmental effects, based on studies in laboratory animals.

Alco Water Service
Rosehart Industrial Park Water System
 System ID #2702121
Water Quality Monitoring

The Tables on this page list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. Although Alco Water Service's Rosehart Industrial Park Water System ("Rosehart") had the water tested for hundreds of constituents, the following tables list only those that were detected. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. CDPH allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Any violation of an MCL or AL is asterisked.
Additional information regarding any violation is provided in this report.

Abbreviations Used in the Tables:

< means "less than" N/A = Not Applicable
 MFL = Million Fibers per Liter ND = Not Detectable at testing limit
 NTU = Nephelometer Turbidity Unit µmhos/cm = micromhos per centimeter
 pCi/L = picoCuries per liter (a measure of radiation)
 µg/l = micrograms per liter or parts per billion (ppb)
 mg/l = milligrams per liter or parts per million (ppm)

Definitions Used in the Tables:

- ❖ **Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
- ❖ **Primary Drinking Water Standard (PDWS):** MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.
- ❖ **Secondary Drinking Water Standard (SDWS):** MCLs for contaminants that affect taste, odor or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.
- ❖ **Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.
- ❖ **Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).
- ❖ **Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- ❖ **Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- ❖ **Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD						
Chemical or Constituent (& reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Gross Alpha (pCi/L)	8/21/2013	4.290	4.290	15	(0)	Erosion of natural deposits
Arsenic (µg/l)	10/26/2011	0.98	0.98	10	0.004	Erosion of natural deposits; runoff from orchards, glass and electronics production wastes
Barium (µg/l)	10/26/2011	72	72	1,000	2,000	Discharge of oil drilling wastes and from metal refineries; erosion of natural deposits
Chromium (µg/l)	10/26/2011	3.2	3.2	50	(100)	Discharge from steel and pulp mills and chrome plating; erosion of natural deposits
Fluoride (mg/l)	10/26/2011	0.53	0.53	2.0	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories
Nitrate (mg/l) (as nitrate, NO ₃)	12/11/2012	2.8	2.8	45	45	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Selenium (µg/l)	10/26/2011	3	3	50	30	Discharge from petroleum, glass, and metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; runoff from livestock lots (feed additive)

DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD

Chemical or Constituent (& reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Iron (µg/l)	3/29/2012	120	120	300	N/A	Leaching from natural deposits; industrial wastes
Turbidity (NTU)	3/29/2012	1.3	1.3	5	N/A	Soil runoff
Total Dissolved Solids (mg/l)	3/29/2012	410	410	1,000	N/A	Runoff/leaching from natural deposits
Specific Conductance (µmhos/cm)	8/12/2008	640	640	1,600	N/A	Substances that form ions when in water; seawater influence
Chloride (mg/l)	10/30/2002	32	32	500	N/A	Runoff/leaching from natural deposits; seawater influence
Sulfate (mg/l)	10/30/2002	115	115	500	N/A	Runoff/leaching from natural deposits; industrial wastes

SPLASH ZONE

VOLUNTARY WATER CONSERVATION MEASURES:

The future of water conservation is in our hands! Help us to save for our future!

In January, Governor Brown told us we were in a State of Emergency and officially declared a drought. He asked all Californians to reduce water used by at least **20%**. The

following voluntary measures are Rosehart's answer to that call. Please follow these guidelines so that we all do not have to face more serious measures in the future. Thank you for your help!

NO CUSTOMER SHALL USE UTILITY-SUPPLIED WATER FOR NON-ESSENTIAL OR UNAUTHORIZED USES AS DEFINED BELOW:

1. Use of water through any connection when the utility has notified the customer in writing to repair a broken or defective plumbing, sprinkler, watering or irrigation system and the customer has failed to make such repairs within 5 days after receipt of such notice.
2. Use of water which results in flooding or run-off in gutters, waterways, patios, driveway, or streets.
3. Use of water for washing aircraft, cars, buses, boats, trailers or other vehicles without a positive shut-off nozzle on the outlet end of the hose. Exceptions include washing vehicles at commercial or fleet vehicle washing facilities operated at fixed locations where equipment-using water is properly maintained to avoid wasteful use.
4. Use of water through a hose for washing buildings, structures, sidewalks, walkways, driveways, patios, parking lots, tennis courts, or other hard-surfaced areas in a manner, which results in excessive run-off or waste.
5. Use of water for watering streets with trucks, except for initial wash-down for construction purposes (if street sweeping is not feasible), or to protect the health and safety of the public.
6. Use of water for construction purposes, such as consolidation of backfill, dust control, or other uses unless no other source of water or other method can be used.
7. Use of water for more than minimal landscaping in connection with any new construction.
8. Use of water for outside plants, lawn, landscape, and turf areas more often than every other day, with even numbered addresses watering on even numbered days of the month and odd numbered addresses watering on the odd numbered days of the month, except that this provision shall not apply to commercial nurseries, golf courses and other water-dependent industries.
9. Use of water for watering outside plants, lawn, landscape and turf areas during certain hours if and when specified in Schedule No. 14.1 when the schedule is in effect.
10. Use of water for watering outside plants and turf areas using a hand-held hose without a positive shut-off valve.
11. Use of water for decorative fountains or the filling or topping off of decorative lakes or ponds. Exceptions are made for those decorative fountains, lakes, or ponds which utilize recycled water.
12. Use of water for the filling or refilling of swimming pools.
13. Service of water by any restaurant except upon the request of the patron.
